MITSUYO MAEDA
0:08 / 5:51
YouTube
Judo, according to Prof. Maeda, is different from Jiu Jitsu, being a greatly modified and improved form of that art, and has three objects: Physical culture, moral culture and self defense.
Mitsuyo Maeda is considered by many as "The Father of Brazilian Jiu Jitsu" because he taught Judo (also known as "Kano Jiu Jitsu") to many of his students in Brazil, including a young Carlos Gracie. His legend and influence is used to support different narratives, but what were his actual views? In a 1905 interview, Maeda shared his knowledge on different topics.
Unqualified Jiu Jitsu Instructors

Romulus
According to 2 sources
The senate is said to have been created by Rome's first king, Romulus, initially consisting of 100 men. The descendants of those 100 men subsequently became the patrician class. [8] Rome's fifth king, Lucius Tarquinius Priscus, chose a further 100 senators.
Roman Senate - Wikipedia
en.wikipedia.org
According to Roman tradition, the Senate was founded by Romulus, the legendary founder of Rome, in the 8th century BC. As the story goes, Romulus established the Senate as a council of elders to advise and assist him in governing the growing city-state of Rome.

Hidetaka Aso
Hidetaka Aso [麻生秀孝], founder of Submission Arts Wrestling, was born in Hiroshima Prefecture, Japan on Octuber 29th, 1950. Aso, a student of Karl Gotch, is a two times All Japan Wrestling Champion and a Sambo World Champion (1981 Sambo World Championship held in Spain). One of his most notable victories came during the Sambo American Championship of 1979, where the heavyweight claimed 1st place after defeating all of his 8 opponents. A 5th degree black belt in Kodokan Judo, knowledgeable catch wrestler, author of many textbooks, and chairman of prestigious martial arts federations and committees; Hidetaka Aso is highly regarded as a guru of the science of submission wrestling.
Euclydes Hatem
Euclydes "Tatu" Hatem (born on September 16, 1914) was a Brazilian Catch Wrestler and founder of Brazilian Luta Livre. He was a student of Catch As Catch Can Wrestling Coach: Rufino dos Santos, known for defeating Carlos Grace in a Submission only match. Hatem was arguably the greatest Submission Wrestling competitor in Brazil during the 30's and 40's, famous for his dominating victories in Catch Wrestling and Clash of the Style Matches that positioned him as a fan favorite. He holds victories against George Gracie and Takeo Yano, (a student of Mitsuyo Maeda, and head of a non-Gracie BJJ lineage). Both Gracie and Yano later learned from Mestre Tatu. He retired on a long undefeated streak and spent the rest of his days teaching and building the basis of Brazilian Luta Livre.
Here is a full article about Euclydes Hatem.
Karl Gotch
Karl Gotch, born Karl Istaz, in 1924 (Antwerp Belgium), was a 7 time Belgium Greco-Roman Wrestling Champion and 7 time Belgium Freestyle Wrestling Champion, he represented Belgium in the 1948 Olympic Games in both styles. During the mid 1950's Gotch became a student of the Snake Pit, run by the renowned catch wrestler Billy Riley. The gym was the center of learning submission wrestling as practiced in the mining town of Wigan, popularly known as catch-as-catch-can. It was here that Karl Gotch did most of his training and honed his catch wrestling skills. He had a reputation for possessing superior specific wrestling strength and fitness, trademark of purebred catch wrestlers.
Gotch conquered several Professional Wrestling titles, both in the United States and Japan, during a time when Professional Wrestling basically allowed for everything that had been banned from Amateur or Olympic Wrestling. Gotch attained legendary status in Japan, earning the name of Kamisama ('god of wrestling'). Always famed as a true hooker, a legit expert of the rough style of Catch Wrestling. In the 1970's he taught the art of slams, sleepers and joint locks to the likes of Antonio Inoki, Tatsumi Fujinami, Yoshiaki Fujiwara, Satoru Sayama, Masami Soranaka, Akira Maeda and Hidetaka Aso among other

Submission Arts Wrestling (SAW)
Submission Arts Wrestling (SAW) [サブミッションアーツレスリング] is a modern Catch Wrestling based Japanese Martial Art and Combat Sport that incorporates elements from Sambo and Judo. Founded in the 1980's by Hidetaka Aso, a student of Karl Gotch, SAW constitutes a NO-GI grappling system that focuses in forcing ones opponent to submit by employing "chains" of chokes and joint locks. One of the trademarks of SAW are its many variations of devastating leglocks. Like its predecessor, SAW supports the belief that a submission can be obtained by establishing either a position or a hold. The practice of Submission Arts Wrestling relies on solid technical principles, live sparring sessions and specific conditioning.
Technical elements of SAW:
Kumiwaza (to grapple)
Nage (to throw)
Osaekomi (to hold down)
Suipu (to sweep)
Shime (to strangle)
Kansetsu (to joint lock)
Submission Arts Wrestling is practiced on a wrestling mat (tatami). Being a NO-GI hierarchical art, the practitioners commonly wear a t-shirt or rashguard, shorts or tights and a Japanese belt (obi) of the proper color according to its grading system.

Hidetaka Aso
Hidetaka Aso [麻生秀孝], founder of Submission Arts Wrestling, was born in Hiroshima Prefecture, Japan on Octuber 29th, 1950. Aso, a student of Karl Gotch, is a two times All Japan Wrestling Champion and a Sambo World Champion (1981 Sambo World Championship held in Spain). One of his most notable victories came during the Sambo American Championship of 1979, where the heavyweight claimed 1st place after defeating all of his 8 opponents. A 5th degree black belt in Kodokan Judo, knowledgeable catch wrestler, author of many textbooks, and chairman of prestigious martial arts federations and committees; Hidetaka Aso is highly regarded as a guru of the science of submission wrestling.
Euclydes Hatem
Euclydes "Tatu" Hatem (born on September 16, 1914) was a Brazilian Catch Wrestler and founder of Brazilian Luta Livre. He was a student of Catch As Catch Can Wrestling Coach: Rufino dos Santos, known for defeating Carlos Gracie in a Submission only match. Hatem was arguably the greatest Submission Wrestling competitor in Brazil during the 30's and 40's, famous for his dominating victories in Catch Wrestling and Clash of the Style Matches that positioned him as a fan favorite. He holds victories against George Gracie and Takeo Yano, (a student of Mitsuyo Maeda, and head of a non-Gracie BJJ lineage). Both Gracie and Yano later learned from Mestre Tatu. He retired on a long undefeated streak and spent the rest of his days teaching and building the basis of Brazilian Luta Livre.
Here is a full article about Euclydes Hatem.
Karl Gotch
Karl Gotch, born Karl Istaz, in 1924 (Antwerp Belgium), was a 7 time Belgium Greco-Roman Wrestling Champion and 7 time Belgium Freestyle Wrestling Champion, he represented Belgium in the 1948 Olympic Games in both styles. During the mid 1950's Gotch became a student of the Snake Pit, run by the renowned catch wrestler Billy Riley. The gym was the center of learning submission wrestling as practiced in the mining town of Wigan, popularly known as catch-as-catch-can. It was here that Karl Gotch did most of his training and honed his catch wrestling skills. He had a reputation for possessing superior specific wrestling strength and fitness, trademark of purebred catch wrestlers.
Gotch conquered several Professional Wrestling titles, both in the United States and Japan, during a time when Professional Wrestling basically allowed for everything that had been banned from Amateur or Olympic Wrestling. Gotch attained legendary status in Japan, earning the name of Kamisama ('god of wrestling'). Always famed as a true hooker, a legit expert of the rough style of Catch Wrestling. In the 1970's he taught the art of slams, sleepers and joint locks to the likes of Antonio Inoki, Tatsumi Fujinami, Yoshiaki Fujiwara, Satoru Sayama, Masami Soranaka, Akira Maeda and Hidetaka Aso among other

coming from Phra Ram's warrior skills.
Phra Ram's techniques.
I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.
a. Phra Ram Yaeb Longka. Lord Rama breaks into Lanka. This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.
b. Phra Ram Ti Tab. Lord Rama attacks the (enemy) army. In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.
c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.

c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.
II. Another group of techniques is inspired by the time Lord Rama spent in the forest during his exile from Ayutthaya. Here are some of those maneuvers.
d. Phra Ram Tang Pa. Lord Rama cuts open the forest. A very strong elbow counter attack, usually executed against a punch or a series of punches. The target is the face or side of the head of the opponent. The elbow strike travels along a diagonal downwards path and packs a lot of power.
e. Phra Ram Den Dong. Lord Rama enters the forest. This spectacular Muay Boran technique employs a knee strike to attack the opponent's face with devastating results. When the opponent bends his knees for whatever reason, the Nak Muay exploits the situation to step on his thigh and deliver a powerful knee strike to the opponent's face or side of the head.
f. Phra Ram Now Sorn. Lord Rama draws the bow. In this technique the Nak Muay employs a forearm parry to deflect the attack coming from above, open the opponent's guard and counterattack with a vicious uppercut to the throat. The opponent's attack can be an elbow or forearm strike or a downward hammer punch.
g. Phra Ram Hak Sorn. Lord Rama breaks the bow. This technique is an application of the ancient strategy of catching and breaking (Chap Hak in Muay jargon). Against an horizontal elbow attack the Nak Muay blocks the strike, seizes the attacking arm and twists it. The shoulder joint is put under great stress and as a result the opponent's arm can be seriously damaged.

David Bushnell (August 30, 1740 – 1824 or 1826), of Westbrook, Connecticut, was an American inventor, a patriot, a teacher, and a medical doctor.

Bushnell invented the first submarine to be used in battle, *Turtle*, as well as a floating mine triggered by contact. He was a veteran of the Revolutionary War.

David Bushnell

Born	August 30, 1740 Westbrook, Connecticut
Died	1824/1826 Warrenton
Nationality	American
Occupation	Inventor
Known for	Building "Turtle" submersible

Early life [edit]

David Bushnell was born in a secluded part of Saybrook, Connecticut on 30 August 1740 and baptized in 1753 into a farming family in what is now Westbrook, Connecticut where his parents Nehemiah Bushnell and Sarah (Susan) Ingham Bushnell owned a farm.[1] He was the first of five children born. Following the death of his father circa 1769, he sold his half interest in the family Westbrook farm to his brother Ezra and entered Yale College in 1771 at the relatively old age of 31.[2]

> Judo, according to Prof. Maeda, is different from Jiu Jitsu, being a greatly modified and improved form of that art, and has three objects: Physical culture, moral culture and self defense.

Mitsuyo Maeda is considered by many as "The Father of Brazilian Jiu Jitsu" because he taught Judo (also known as "Kano Jiu Jitsu") to many of his students in Brazil, including a young Carlos Gracie. His legend and influence is used to support different narratives, but what were his actual views? In a 1905 interview, Maeda shared his knowledge on different topics.

From Wikipedia, the free encyclopedia

For the historian, see David Bushnell (historian). For the entrepreneur, see David P. Bushnell.

David Bushnell (August 30, 1740 – 1824 or 1826), of Westbrook, Connecticut, was an American inventor, a patriot, a teacher, and a medical doctor.

Bushnell invented the first submarine to be used in battle, *Turtle*, as well as a floating mine triggered by contact. He was a veteran of the Revolutionary War.

David Bushnell

Born	August 30, 1740 Westbrook, Connecticut
Died	1824/1826 Warrenton
Nationality	American
Occupation	Inventor
Known for	Building "Turtle" submersible

Early life [edit]

David Bushnell was born in a secluded part of Saybrook, Connecticut on 30 August 1740 and baptized in 1753 into a farming family in what is now Westbrook, Connecticut where his parents Nehemiah Bushnell and Sarah (Susan) Ingham Bushnell owned a farm.[1] He was the first of five children born. Following the death of his father circa 1769, he sold his half interest in the family Westbrook farm to his brother Ezra and entered Yale College in 1771 at the relatively old age of 31.[2]

Coordinates: 38°56′32.9″N 77°04′04.4″W

On February 25, 2024, **Aaron Bushnell**, a 25-year-old serviceman of the United States Air Force, died after setting himself on fire outside the front gate of the Embassy of Israel in Washington, D.C. Immediately before the act, which was live-streamed on Twitch, Bushnell said that he was protesting against "what people have been experiencing in Palestine at the hands of their colonizers" and declared that he "will no longer be complicit in genocide", after which he doused himself with a flammable liquid and set himself on fire.[1][2]

As he burned, Bushnell repeatedly shouted "Free Palestine!" After he collapsed onto the ground, two Secret Service officers attempted to extinguish the flames while a third covered for them with their weapon.[3][4][5] The Metropolitan Police Department also responded to assist the Secret Service. Bushnell was transported to a local hospital in

From Wikipedia, the free encyclopedia

For the historian, see David Bushnell (historian). For the entrepreneur, see David P. Bushnell.

David Bushnell (August 30, 1740 – 1824 or 1826), of Westbrook, Connecticut, was an American inventor, a patriot, a teacher, and a medical doctor.

Bushnell invented the first submarine to be used in battle, *Turtle*, as well as a floating mine triggered by contact. He was a veteran of the Revolutionary War.

Early life [edit]

David Bushnell was born in a secluded part of Saybrook, Connecticut on 30 August 1740 and baptized in 1753 into a farming family in what is now Westbrook, Connecticut where his parents Nehemiah Bushnell and Sarah (Susan) Ingham Bushnell owned a farm.[1] He was the first of five children born. Following the death of his father circa 1769, he sold his half interest in the family Westbrook farm to his brother Ezra and entered Yale College in 1771 at the relatively old age of 31.[2]

David Bushnell

Born	August 30, 1740 Westbrook, Connecticut
Died	1824/1826 Warrenton
Nationality	American
Occupation	Inventor
Known for	Building "Turtle" submersible

> Judo, according to Prof. Maeda, is different from Jiu Jitsu, being a greatly modified and improved form of that art, and has three objects: Physical culture, moral culture and self defense.

Mitsuyo Maeda is considered by many as “The Father of Brazilian Jiu Jitsu” because he taught Judo (also known as “Kano Jiu Jitsu”) to many of his students in Brazil, including a young Carlos Gracie. His legend and influence is used to support different narratives, but what were his actual views? In a 1905 interview, Maeda shared his knowledge on different topics.

Hidetaka Aso
Hidetaka Aso [麻生秀孝], founder of Submission Arts Wrestling, was born in Hiroshima Prefecture, Japan on October 29th, 1950. Aso, a student of Karl Gotch, is a two times All Japan Wrestling Champion and a Sambo World Champion (1981 Sambo World Championship held in Spain). One of his most notable victories came during the Sambo American Championship of 1979, where the heavyweight claimed 1st place after defeating all of his 8 opponents. A 5th degree black belt in Kodokan Judo, knowledgeable catch wrestler, author of many textbooks, and chairman of prestigious martial arts federations and committees; Hidetaka Aso is highly regarded as a guru of the science of submission wrestling.
Euclydes Hatem
Euclydes "Tatu" Hatem (born on September 16, 1914) was a Brazilian Catch Wrestler and founder of Brazilian Luta Livre. He was a student of Catch As Catch Can Wrestling Coach Rolando Sarlo, known for defeating Carlos Gracie in a Submission only match. Hatem was arguably the greatest Submission Wrestling competitor in Brazil during the 30's and 40's, famous for his dominating victories in Catch Wrestling and Clash of the Style Matches that positioned him as a fan favorite. He holds victories against George Gracie and Takeo Yano, (a student of Mitsuyo Maeda, and head of a non-Gracie BJJ lineage). Both Gracie and Yano later learned from Mestre Tatu. He retired on a long undefeated streak and spent the rest of his days teaching and building the basis of Brazilian Luta Livre.
Here is a full article about Euclydes Hatem.
Karl Gotch
Karl Gotch, born Karl Istaz, in 1924 (Antwerp Belgium), was a 7 time Belgium Greco-Roman Wrestling Champion and 7 time Belgium Freestyle Wrestling Champion, he represented Belgium in the 1948 Olympic Games in both styles. During the mid 1950's Gotch became a student of the Snake Pit, run by the renowned catch wrestler Billy Riley. The gym was the center of learning submission wrestling as practiced in the mining town of Wigan, popularly known as catch-as-catch-can. It was here that Karl Gotch did most of his training and honed his catch wrestling skills. He had a reputation for possessing superior specific wrestling strength and fitness, trademark of purebred catch wrestlers.
Gotch conquered several Professional Wrestling titles, both in the United States and Japan, during a time when Professional Wrestling basically allowed for everything that had been banned from Amateur or Olympic Wrestling. Gotch attained legendary status in Japan, earning the name of Kamisama ('god of wrestling'). Always famed as a true hooker, a legit expert of the rough style of Catch Wrestling. In the 1970's he taught the art of slams, sleepers and joint locks to the likes of Antonio Inoki, Tatsumi Fujinami, Yoshiaki Fujiwara, Satoru Sayama, Masami Soranaka, Akira Maeda and Hidetaka Aso among other.

Submission Arts Wrestling (SAW)
Submission Arts Wrestling (SAW) [サブミッションアーツレスリング] is a modern Catch Wrestling based Japanese Martial Art and Combat Sport that incorporates elements from Sambo and Judo. Founded in the 1980's by Hidetaka Aso, a student of Karl Gotch, SAW constitutes a NO-GI grappling system that focuses in forcing ones opponent to submit by employing "chains" of chokes and joint locks. One of the trademarks of SAW are its many variations of devastating leglocks. Like its predecessor, SAW supports the belief that a submission can be obtained by establishing either a position or a hold. The practice of Submission Arts Wrestling relies on solid technical principles, live sparring sessions and specific conditioning.
Technical elements of SAW:
Kumiwaza (to grapple)
Nage (to throw)
Osaekomi (to hold down)
Sutemi (to sweep)
Shime (to strangle)
Kansetsu (to joint lock)
Submission Arts Wrestling is practiced on a wrestling mat (tatami). Being a NO-GI hierarchical art, the practitioners commonly wear a t-shirt or rashguard, shorts or tights and a Japanese belt (obi) of the proper color according to its grading system.

HOME NEWS MUAYBORAN IMSA MUAYSTYLES
Phra Ram's techniques.
I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.
a. Phra Ram Yaeb Longka. Lord Rama breaks into Lanka. This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.
b. Phra Ram Ti Tab. Lord Rama attacks the (enemy) army. In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.
c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.
II. Another group of techniques is inspired by the time Lord Rama spent in the forest during his exile from Ayutthaya. Here are some of those maneuvers.
d. Phra Ram Tang Pa. Lord Rama cuts open the forest. A very strong elbow counter attack, usually executed against a punch or a series of punches. The target is the face or side of the head of the opponent. The elbow strike travels along a diagonal downwards path and packs a lot of power.
e. Phra Ram Den Dong. Lord Rama enters the forest. This spectacular Muay Boran technique employs a knee strike to attack the opponent's face with devastating results. When the opponent bends his knees for whatever reason, the Nak Muay exploits the situation to step on his thigh and deliver a powerful knee strike to the opponent's face or side of the head.
f. Phra Ram Now Sorn. Lord Rama draws the bow. In this technique the Nak Muay employs a forearm parry to deflect the attack coming from above, open the opponent's guard and counterattack with a vicious uppercut to the throat. The opponent's attack can be an elbow or forearm strike or a downward hammer punch.
g. Phra Ram Hak Sorn. Lord Rama breaks the bow. This technique is an application of the ancient strategy of catching and breaking (Chap Hak in Muay jargon). Against an horizontal elbow attack the Nak Muay blocks the strike, seizes the attacking arm and twists it. The shoulder joint is put under great stress and as a result the opponent's arm can be seriously damaged.

David Bushnell

19 languages

From Wikipedia, the free encyclopedia

For the historian, see David Bushnell (historian). For the entrepreneur, see David P. Bushnell.

David Bushnell (August 30, 1740 – 1824 or 1826), of Westbrook, Connecticut, was an American inventor, a patriot, a teacher, and a medical doctor.

Bushnell invented the first submarine to be used in battle, *Turtle*, as well as a floating mine triggered by contact. He was a veteran of the Revolutionary War.

David Bushnell	
Born	August 30, 1740 Westbrook, Connecticut
Died	1824/1826 Warrenton
Nationality	American
Occupation	Inventor
Known for	Building "Turtle" submersible

Early life [edit]

David Bushnell was born in a secluded part of Saybrook, Connecticut on 30 August 1740 and baptized in 1753 into a farming family in what is now Westbrook, Connecticut where his parents Nehemiah Bushnell and Sarah (Susan) Ingham Bushnell owned a farm.[1] He was the first of five children born. Following the death of his father circa 1769, he sold his half interest in the family Westbrook farm to his brother Ezra and entered Yale College in 1771 at the relatively old age of 31.[2]

On February 25, 2024, **Aaron Bushnell**, a 25-year-old serviceman of the United States Air Force, died after setting himself on fire outside the front gate of the Embassy of Israel in Washington, D.C. Immediately before the act, which was live-streamed on Twitch, Bushnell said that he was protesting against "what people have been experiencing in Palestine at the hands of their colonizers" and declared that he "will no longer be complicit in genocide", after which he doused himself with a flammable liquid and set himself on fire.[1][2]

As he burned, Bushnell repeatedly shouted "Free Palestine!" After he collapsed onto the ground, two Secret Service officers attempted to extinguish the flames while a third covered for them with their weapon.[3][4][5] The Metropolitan Police Department also responded to assist the Secret Service. Bushnell was transported to a local hospital in

From Wikipedia, the free encyclopedia

For the historian, see David Bushnell (historian). For the entrepreneur, see David P. Bushnell.

David Bushnell (August 30, 1740 – 1824 or 1826), of Westbrook, Connecticut, was an American inventor, a patriot, a teacher, and a medical doctor.

Bushnell invented the first submarine to be used in battle, *Turtle*, as well as a floating mine triggered by contact. He was a veteran of the Revolutionary War.

David Bushnell	
Born	August 30, 1740 Westbrook, Connecticut
Died	1824/1826 Warrenton
Nationality	American
Occupation	Inventor
Known for	Building "Turtle" submersible

Early life [edit]

David Bushnell was born in a secluded part of Saybrook, Connecticut on 30 August 1740 and baptized in 1753 into a farming family in what is now Westbrook, Connecticut where his parents Nehemiah Bushnell and Sarah (Susan) Ingham Bushnell owned a farm.[1] He was the first of five children born. Following the death of his father circa 1769, he sold his half interest in the family Westbrook farm to his brother Ezra and entered Yale College in 1771 at the relatively old age of 31.[2]

Romulus
According to 2 sources
The senate is said to have been created by Rome's first king, Romulus, initially consisting of 100 men. The descendants of those 100 men subsequently became the patrician class. [8] Rome's fifth king, Lucius Tarquinius Priscus, chose a further 100 senators.
Roman Senate - Wikipedia

Hidetaka Aso
Hidetaka Aso [麻生秀孝], founder of Submission Arts Wrestling, was born in Hiroshima Prefecture, Japan on Octuber 29th, 1950. Aso, a student of Karl Gotch, is a two times All Japan Wrestling Champion and a Sambo World Champion (1981 Sambo World Championship held in Spain). One of his most notable victories came during the Sambo American Championship of 1979, where the heavyweight claimed 1st place after defeating all of his 8 opponents. A 5th degree black belt in Kodokan Judo, knowledgeable catch wrestler, author of many textbooks, and chairman of prestigious martial arts federations and committees; Hidetaka Aso is highly regarded as a guru of the science of submission wrestling.
Euclydes Hatem
Euclydes "Tatu" Hatem (born on September 16, 1914) was a Brazilian Catch Wrestler and founder of Brazilian Luta Livre. He was a student of Catch As Catch Can Wrestling Coach: Rufino dos Santos, known for defeating Carlos Gracie in a Submission only match. Hatem was arguably the greatest Submission Wrestling competitor in Brazil during the 30's and 40's, famous for his dominating victories in Catch Wrestling and Clash of the Style Matches that positioned him as a fan favorite. He holds victories against George Gracie and Takeo Yano, (a student of Mitsuyo Maeda, and head of a non-Gracie BJJ lineage). Both Gracie and Yano later learned from Mestre Tatu. He retired on a long undefeated streak and spent the rest of his days teaching and building the basis of Brazilian Luta Livre.
Here is a full article about Euclydes Hatem.
Karl Gotch
Karl Gotch, born Karl Istaz, in 1924 (Antwerp Belgium), was a 7 time Belgium Greco-Roman Wrestling Champion and 7 time Belgium Freestyle Wrestling Champion, he represented Belgium in the 1948 Olympic Games in both styles. During the mid 1950's Gotch became a student of the Snake Pit, run by the renowned catch wrestler Billy Riley. The gym was the center of learning submission wrestling as practiced in the mining town of Wigan, popularly known as catch-as-catch-can. It was here that Karl Gotch did most of his training and honed his catch wrestling skills. He had a reputation for possessing superior specific wrestling strength and fitness, trademark of purebred catch wrestlers.
Gotch conquered several Professional Wrestling titles, both in the United States and Japan, during a time when Professional Wrestling basically allowed for everything that had been banned from Amateur or Olympic Wrestling. Gotch attained legendary status in Japan, earning the name of Kamisama ('god of wrestling'). Always famed as a true hooker, a legit expert of the rough style of Catch Wrestling. In the 1970's he taught the art of slams, sleepers and joint locks to the likes of Antonio Inoki, Tatsumi Fujinami, Yoshiaki Fujiwara, Satoru Sayama, Masami Soranaka, Akira Maeda and Hidetaka Aso among other

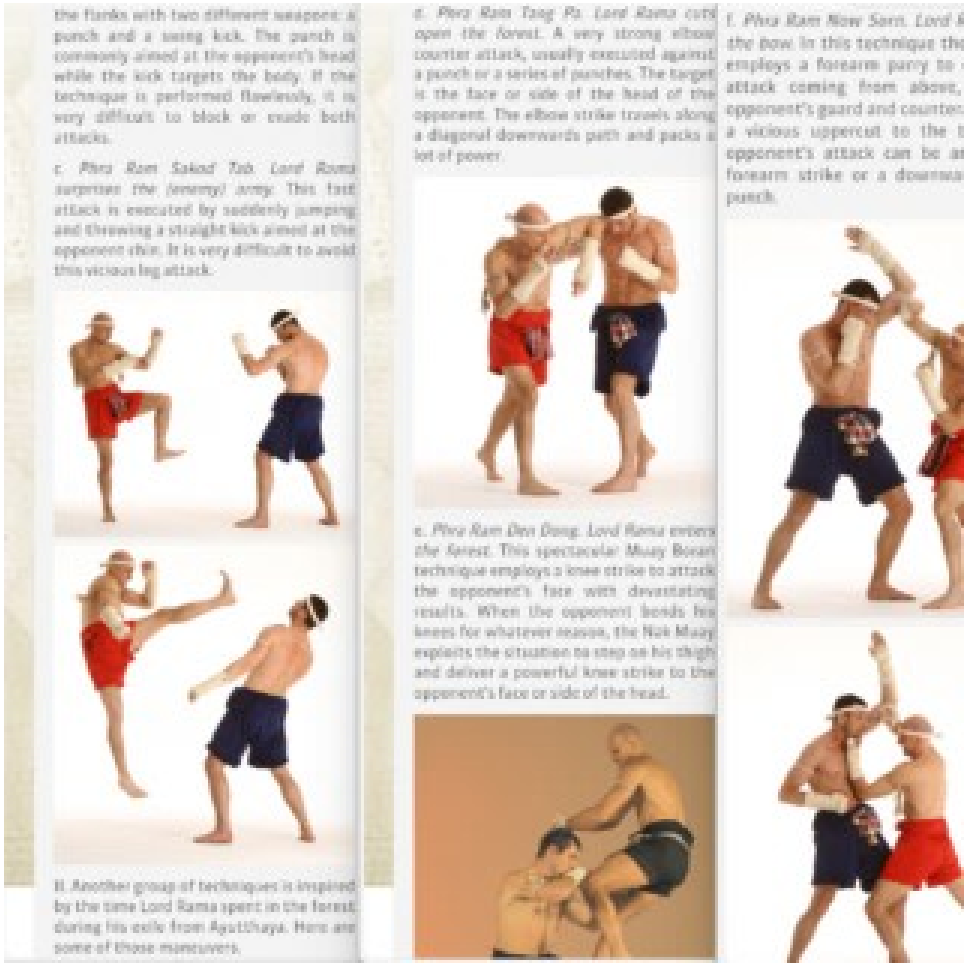
Submission Arts Wrestling (SAW)
Submission Arts Wrestling (SAW) [サブミッションアーツレスリング] is a modern Catch Wrestling based Japanese Martial Art and Combat Sport that incorporates elements from Sambo and Judo. Founded in the 1980's by Hidetaka Aso, a student of Karl Gotch, SAW constitutes a NO-GI grappling system that focuses in forcing ones opponent to submit by employing "chains" of chokes and joint locks. One of the trademarks of SAW are its many variations of devastating leglocks. Like its predecessor, SAW supports the belief that a submission can be obtained by establishing either a position or a hold. The practice of Submission Arts Wrestling relies on solid technical principles, live sparring sessions and specific conditioning.
Technical elements of SAW:
Kumiwaza (to grapple)
Nage (to throw)
Osaekomi (to hold down)
Sutpu (to sweep)
Shime (to strangle)
Kansetsu (to joint lock)
Submission Arts Wrestling is practiced on a wrestling mat (tatami). Being a NO-GI hierarchical art, the practitioners commonly wear a t-shirt or rashguard, shorts or tights and a Japanese belt (obi) of the proper color according to its grading system.
What is Submission Arts Wrestling (SAW)? - Japan...
With Bare Hands



the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.
c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent shin. It is very difficult to avoid this vicious leg attack.
open the forest. A very strong elbow counter attack, usually executed against a punch or a series of punches. The target is the face or side of the head of the opponent. The elbow strike travels along a diagonal downwards path and packs a lot of power.
the bow. In this technique the employs a forearm parry to attack coming from above, opponent's guard and counter a vicious uppercut to the opponent's attack can be a forearm strike or a downwa punch.
c. Phra Ram Den Dong. Lord Rama enters the forest. This spectacular Muay Boran technique employs a knee strike to attack the opponent's face with devastating results. When the opponent bends his knees for whatever reason, the Nak Muay exploits the situation to step on his thigh and deliver a powerful knee strike to the opponent's face or side of the head.
II. Another group of techniques is inspired by the time Lord Rama spent in the forest during his exile from Ayutthaya. Here are some of those maneuvers.

שְׁנוֹלְדָה רִבְקָה. וְיִצְחָק הָיָה בֶּן לֵיוֹ שָׁנָה. שָׁהָרִי בּוֹ בְּפֶרֶק מֵתָה שָׂרָה,
וּמִשֶּׁנּוֹלַד יִצְחָק עַד הָעֲקֵדָה שָׁמֵתָה שָׂרָה, לֵיוֹ שָׁנָה הָיוּ – כִּי בַּת צ'
הָיְתָה כְּשֶׁנּוֹלַד יִצְחָק, וּבַת קכ"ז כְּשֶׁמֵּתָה – שֶׁנֶּאֱמַר וַיִּהְיוּ חֵי שָׂרָה
וְגוֹ' הָרֵי לְיִצְחָק לֵיוֹ שָׁנִים, וּבוֹ בְּפֶרֶק טוֹלְדָה רִבְקָה: הַמְתִּין לָהּ עַד
שֶׁתְּהָא רְאוּיָה לְבִיאָה ג' שָׁנִים וְנָשָׂאָהּ:
בן ארבעים שנה FORTY YEARS OLD — For when Abraham came from
Mount Moriah he received the news that Rebecca was born (22:20).
Isaac was then thirty-seven years old, because at that time Sarah died
and from the birth of Isaac until the Binding — when Sarah died —
there were 37 years since she was 90 years old when Isaac was born and
127 when she died, as it is said. (23:1) "And the life of Sarah was [one
hundred and twenty seven years]" — thus Isaac was then 37 years old.
At that period Rebecca was born and he waited until she was fit for
marriage — 3 years — and then married her (Seder Olam).
בת בתואל מפדן ארם אחות לבן. וכי עֲדַיִן לֹא נִכְתַּב שֶׁהִיא בַּת
בתואל ואחות לבן ומפדן ארם? אֶלָּא לְהַגִּיד שִׁבְחָהּ, שֶׁהִיתָה בַּת

Two more "facts"?

The tradition takes certain events as happening at the same time. These events are: the binding of Isaac on the altar in Moriah (Genesis 22:9); Abraham informed of Rebekah's birth (Genesis 22:20-23); and Sarah's death aged 127 (Genesis 23:1-2).

If these events *did* all happen at the same time, within just a few weeks, then two more necessary inferences could be added to the six facts above...

- 7. Since Isaac was 37 at his mother's death, he was 37 when Rebekah was born.
- 8. Since Isaac was 40 when he married Rebekah, Rebekah would be 3 when the marriage took place (because 40-37=3)

From Simple English Wikipedia, the free encyclopedia

Joseph Vissarionovich Stalin[c] (born **Ioseb Besarionis dze Jughashvili**;[d] (18 December 1878 – 5 March 1953) was a communist revolutionary and politician who led the Soviet Union from 1924 to his death.

In the Soviet Union, Stalin created a totalitarian political system now called Stalinism. He also used Marxism–Leninism and made it the Soviet Union's official political ideology.

After World War II, Stalin gained control over all of Eastern Europe, including part of Germany. There he set up a series of loyal Marxist-Leninist single-party states. This made the Soviet Union a superpower. Stalin's policies turned the Soviet Union into a powerful, relatively modern country that was the largest on Earth.

Stalin was known as a brutal leader who was responsible for the deaths of over 20 million people in what was called the Holodomor.

From Simple English Wikipedia, the free encyclopedia

Joseph Vissarionovich Stalin[c] (born **Ioseb Besarionis dze Jughashvili**);[d] (18 December 1878 – 5 March 1953) was a communist revolutionary and politician who led the Soviet Union from 1924 to his death.

In the Soviet Union, Stalin created a totalitarian political system now called Stalinism. He also used Marxism–Leninism and made it the Soviet Union's official political ideology.

After World War II, Stalin gained control over all of Eastern Europe, including part of Germany. There he set up a series of loyal Marxist-Leninist single-party states. This made the Soviet Union a superpower. Stalin's policies turned the Soviet Union into a powerful, relatively modern country that was the largest on Earth.

Stalin was known as a brutal leader who was responsible for the deaths of over 20 million people in what was called the Holodomor.

Name [change | change source]

Stalin was born as **Ioseb Besarionis dze Jughashvili** or **Iosif Dzhugashvili**. He began calling himself "Stalin" in 1912.

Rashi on Genesis 25:20
25:20
בן ארבעים שנה. שֶׁהֲרֵי כְּשֶׁבָּא אַבְרָהָם מֵהַר הַמּוֹרִיָּה נִתְבַּשֵּׂר שֶׁנּוֹלְדָה רִבְקָה, וְיִצְחָק הָיָה בֶּן ל"ז שָׁנָה, שֶׁהֲרֵי בּוֹ בַּפֶּרֶק מֵתָה שָׂרָה, וּמִשֶּׁנּוֹלַד יִצְחָק עַד הָעֲקֵדָה שְׁמוֹנָה שָׁרָה, ל"ז שָׁנָה הָיוּ – כִּי בַּת צ' הָיְתָה כְּשֶׁנּוֹלַד יִצְחָק, וּבַת קכ"ז כְּשֶׁמֵּתָה – שֶׁנֶּאֱמַר וַיִּהְיוּ חֵיֵי שָׂרָה וְגוֹ' הֲרֵי לְיִצְחָק ל"ז שָׁנִים, וּבוֹ בַּפֶּרֶק נוֹלְדָה רִבְקָה; הַמְתִּין לָהּ עַד שֶׁתְּהֵא רְאוּיָה לְבִיאָה ג' שָׁנִים וְנִשְׂאָהּ:
בן ארבעים שנה FORTY YEARS OLD — For when Abraham came from Mount Moriah he received the news that Rebecca was born (22:20). Isaac was then thirty-seven years old, because at that time Sarah died and from the birth of Isaac until the Binding — when Sarah died — there were 37 years since she was 90 years old when Isaac was born and 127 when she died, as it is said, (23:1) "And the life of Sarah was [one hundred and twenty seven years]" — thus Isaac was then 37 years old. At that period Rebecca was born and he waited until she was fit for marriage — 3 years — and then married her (Seder Olam).
בת בתואל מפדן ארם אחות לבן. וְכִי עֲדַיִן לֹא נִכְתַּב שֶׁהִיא בַּת בתואל ואחות לבן ומפדן ארם? אֶלָּא לְהַגִּיד שֶׁבְּחָה, שֶׁהִיתָה בַּת

Two more "facts"?

The tradition takes certain events as happening at the same time. These events are: the binding of Isaac on the altar in Moriah (Genesis 22:9); Abraham informed of Rebekah's birth (Genesis 22:20-23); and Sarah's death aged 127 (Genesis 23:1-2).

If these events *did* all happen at the same time, within just a few weeks, then two more necessary inferences could be added to the six facts above...

- 7. Since Isaac was 37 at his mother's death, he was 37 when Rebekah was born.
- 8. Since Isaac was 40 when he married Rebekah, Rebekah would be 3 when the marriage took place (because 40-37=3)

From Simple English Wikipedia, the free encyclopedia

Joseph Vissarionovich Stalin[c] (born **Ioseb Besarionis dze Jughashvili**);[d] (18 December 1878 – 5 March 1953) was a communist revolutionary and politician who led the Soviet Union from 1924 to his death.

In the Soviet Union, Stalin created a totalitarian political system now called Stalinism. He also used Marxism–Leninism and made it the Soviet Union's official political ideology.

After World War II, Stalin gained control over all of Eastern Europe, including part of Germany. There he set up a series of loyal Marxist-Leninist single-party states. This made the Soviet Union a superpower. Stalin's policies turned the Soviet Union into a powerful, relatively modern country that was the largest on Earth.

Stalin was known as a brutal leader who was responsible for the deaths of over 20 million people in what was called the Holodomor.

In the Soviet Union, Stalin created a totalitarian political system now called Stalinism. He also used Marxism–Leninism and made it the Soviet Union's official political ideology.

After World War II, Stalin gained control over all of Eastern Europe, including part of Germany. There he set up a series of loyal Marxist-Leninist single-party states. This made the Soviet Union a superpower. Stalin's policies turned the Soviet Union into a powerful, relatively modern country that was the largest on Earth.

Stalin was known as a brutal leader who was responsible for the deaths of over 20 million people in what was called the Holodomor.

From Simple English Wikipedia, the free encyclopedia

Joseph Vissarionovich Stalin[c] (born **Ioseb Besarionis dze Jughashvili**);[d] (18 December 1878 – 5 March 1953) was a communist revolutionary and politician who led the Soviet Union from 1924 to his death.

In the Soviet Union, Stalin created a totalitarian political system now called Stalinism. He also used Marxism–Leninism and made it the Soviet Union's official political ideology.

After World War II, Stalin gained control over all of Eastern Europe, including part of Germany. There he set up a series of loyal Marxist-Leninist single-party states. This made the Soviet Union a superpower. Stalin's policies turned the Soviet Union into a powerful, relatively modern country that was the largest on Earth.

Stalin was known as a brutal leader who was responsible for the deaths of over 20 million people in what was called the Holodomor.

Guthrum (died 890) was a leader of a major Danish invasion of Anglo-Saxon England who waged war against the West Saxon king Alfred the Great (reigned 871–899) and later made himself king of East Anglia (reigned 880–890).
Guthrum went to England in the great Danish invasion of 865, and in mid-January 878 he attacked Alfred's kingdom of Wessex. Although all Wessex was overrun, a successful counterattack by Alfred in May brought Guthrum to terms. While negotiations were

From Wikipedia, the free encyclopedia
The Skifa Kahla (Arabic: السفيفة الكحلة), also known as Bab Zoulla,[1] is a fortification of the 10th century, the structure is one of the few remnants of the ancient walls of Mahdia in Tunisia.[2] The building was built by the Fatimids, in which it was used as the main fort to protect the access to the city.[3] The fort is one of the few remnants of the ancient ramparts, as well as being one of the access points to the historic center of Mahdia.[1]

Nabu-rimanni (flourished *c.* 491 BC, Babylonia) was the earliest Babylonian astronomer known by name, who devised the so-called System A, a group of ephemerides, or tables, giving the positions of the Moon, Sun, and planets at any given moment. Based on centuries of observation, these tables were nonetheless somewhat crude and were superseded about a century later by Kidinnu's System B, a refined mathematical method for finding celestial positions more accurately. Both systems were in use simultaneously between 250 and 50 BC. Nabu-rimanni also calculated the length of the synodic month (from New Moon to New Moon) to be 29.530614 days, as compared with the modern value of 29.530596 days.

Article | Talk | Read | Edit | View history | Tools

From Wikipedia, the free encyclopedia

Aristarchus of Samos (/ˌærəˈstɑːrkəs/; Ancient Greek: Ἀρίσταρχος ὁ Σάμιος, *Aristarkhos ho Samios*; c. 310 – c. 230 BC) was an ancient Greek astronomer and mathematician who presented the first known heliocentric model that placed the Sun at the center of the universe, with the Earth revolving around the Sun once a year and rotating about its axis once a day. He also supported the theory of Anaxagoras according to which the Sun was just another star.[2]

He likely moved to Alexandria, and he was a student of Strato of Lampsacus, who later became the third head of the Peripatetic School

Cannibalism in the Americas
Cannibalism in the Americas has been practiced in many places throughout much of the history of North America and South America. The modern term "cannibal" is derived from the name of the island Caribs (Kalinago), who were encountered by Christopher Columbus in The Bahamas. While numerous cultures in the Americas were reported by European explorers and colonizers to have engaged in cannibalism, some of these claims may be unreliable since the Spanish Empire used them to justify conquest.
A scene depicting ritualistic Aztec cannibalism being practiced in the Codex Magliabechiano, folio 77r.
At least some cultures have been physically and archeologically proven beyond any doubt whatsoever to have undertaken institutionalized cannibalism. This includes human bones uncovered

The Wari people and funerary cannibalism
The Wari people of the Amazon, Brazil, are known for practicing compassionate funerary cannibalism as recently as the 1990's. It was their cultural norm for the in-laws of the deceased to consume the body at the funeral. Why did they do this? It was not to do with taking on the essence, knowledge or power of the dead. Nor was it nutritional. Nor was it aggressive. Instead it is to do with radically different way that the West sees the body and a person's identity.

Dear friends of WISH CNY,
You may have noticed the past few weeks that we have been featuring both men and women in our posts. This is because we have changed our membership (and our name) to be non-gendered! We are now "We of Italian and Syracuse and Heritage CNY."
The founding members began this group with the immediate goals of replacing the statue of Christopher Columbus (Cristoffa Corombo) in the city center of Syracuse NY, challenging oppressive patriarchal representations of Italian and Italian-American histories, and supporting healing changes to statue culture in the US. We are embracing the universal need for solidarity.
We are accepting new members regardless of gender orientation- and you don't have to be of Italian ancestry either, but you should have a strong connection to Syracuse, NY and care about Italian culture and history.
Join us for as we continue:
• Engaging in community dialogue and leadership to remove and replace the Columbus

MARTIN ALONSO Spanish navigator and companion of Columbus on his first voyage to the New World, b. at Palos de Moguer, 1441; d. there at the convent of La Rabida, 1493. Sprung from a family of seamen, he became a hardy sailor and skillful pilot. According to Parkman and other historians, he sailed under Cousin, a navigator from Dieppe, to the eastern coast of Africa, whence they were carried far to the southwest. They there discovered an unknown land and a mighty river. Pinzon's conduct on this voyage was so mutinous that Cousin entered a complaint to the admiralty on their return home, and had him dismissed from the maritime service of Dieppe. returning to Spain Pinzon became acquainted with Columbus through Fray Juan Perez de Marchina, prior of the convent of La Rabida, and became an enthusiastic promoter of the scheme of the great navigator. Other historians account differently for the origin of Pinzon's interest in Columbus's project. According to these, he heard

PRESS RELEASE
Former Jail Corrections Officer, Wife Sentenced for Producing Child Pornography
Monday, April 8, 2024
Share
For Immediate Release
U.S. Attorney's Office, Western District of Missouri
JEFFERSON CITY, Mo. – A former corrections officer at the Jefferson City Correctional Center and his wife were sentenced in federal court today to charges related to video recording their sexual assault of a 4-year-old victim.
Paul Emerson Schofield, 35, and his wife, Sara Ellen Schofield, 31, both of Jefferson City, were sentenced in separate appearances before U.S. District Judge Brian C. Wimes. Paul Schofield was sentenced to 40 years in federal prison without parole. Sara Schofield was sentenced to 35 years in federal prison without parole. The court also sentenced the Schofields to spend the rest of their lives on supervised release following incarceration.
On Nov. 7, 2023, the Schofields each pleaded guilty to one count of conspiracy to produce child pornography

Hans Christian Anderson Great Danish story teller and possible cannibal.

So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?

Copenhagen, one of the world's most beautiful and livable cities, was built by cannibals.

The beautiful Queen of Denmark, Her Majesty Margethe. Descendant of Cannibals and possibly one herself.

Denmark is one of the world's finest countries. There are no slums and poverty is non existent. All Danes have health care, good housing, a clean environment to live in, and get good education. The women are beautiful and the streets of Copenhagen are colorful and vibrant.

In July 1998 many newspapers published the results of a poll that measured human ignorance. The poll tested thousands of people on questions like; "What's a molecule?" (Only 11% answered correctly!) The poll discovered that only half of the interviewees knew the earth took a year to revolve around the sun and that early humans did not live at the same time as dinosaurs! These were the results for every country tested except for Denmark. Only the Danes scored lower on the worldwide ignorance scale!

When people think of cannibals they envision vicious barbarians living in remote cultures deep in far away jungles. However, anthropologists and historians, such as Will Durant, believe that, "Cannibalism was at one time practically universal." * We are all probably descendants of people who enjoyed human flesh.

But do not think that this cannibalism existed thousands of years ago in the stone age. Pulitzer Prize winner, and perhaps the 20th century's greatest historian, Will Durant wrote that cannibalism took place in Europe, in Denmark at least as late as the eleventh century.**

So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?

Hans Christian Anderson Great Danish story teller and possible cannibal.

Copenhagen, one of the world's most beautiful and livable cities, was built by cannibals.

Color Climax Corporation

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Color Climax Corporation ApS (**CCC**) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967[3] by the Theander brothers[4] and began with the publication of the porn magazine *ColorClimax*, despite pornography being illegal in Denmark until 1969.[5] It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.

Color Climax

Company type	ApS
Industry	Pornography
Founded	1967; 58 years ago
Founder	Peter Theander[1] Jens Theander[2]
Fate	Defunct (2024)
Headquarters	Copenhagen, Denmark
Products	Pornographic films, pornographic magazines

Films [edit]

In 1969, Denmark legalized the production of all kinds of pornography.[6] In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality,[7] some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.

Child pornography [edit]

Color Climax was the first to produce commercial child pornography films.[6] From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography.[8][9] Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.[9][10]

Between 1971 and 1979, the company produced 10-minute films for its *Lolita* series.[6][10][11] These films featured young girls, mainly with men, but sometimes with women or other children.[6][10][11] The girls were mainly between the ages of 7 and 11 years; however, some were younger.[6][10][11] These movies had titles such as *Incest Family*, *Child Love* and *Pre-Teen Sex*.[6][10]

where are the children used by Jens and Peter Theander

[edit]

They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.

This company [edit]

This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

but didnt they violate other laws like age of consent laws in the process? so even if they themselves couldnt be prosecuted couldnt the males or adults in those videos? — Preceding unsigned comment added by 24.7.51.231 (talk) 08:03, 30 August 2010 (UTC) [reply]

Is there any reference or article which records or logs this TV2 report/s? I feel this is important since CCC are remaining tight lipped about there role in this history of child porn production. Eg who were the producers? Why did CCC not volunteer their names? Can any sites or article be recommended which takes this aspect forward? Very important. To put this in context section 234 of the Danish Criminal code (1969) states that the distribution/sale of porn to people under 16 years old is prohibited.

But the ban on the production and distribution of child pornography in Denmark didnt exist until section 235 of the Danish Criminal Code (1980). So the picture this paints is that for almost 11 years the Danish establishment allowed Child Pornography to be sold and consumed , even though porn couldnt be sold to under 16's. So Denmark in the 1970's had the scenario of adults watching pre-teen children filmed having sex/being raped with/by adults whilst at the same time this porn couldnt be sold to people under 16!! Anyone want to explain this disturbing fact to me?! There is 11 years of Danish history that hasnt been researched or recorded here. Needs a lot of work.

The age of consent in Denmark is 15 years of age. Thus it has never been legal to produce pornographic material in Denmark using children under the age of 15 as models in adult situations.

Denmark is one of the world's finest countries. There are no slums and poverty is non existent. All Danes have health care, good housing, a clean environment to live in, and get good education. The women are beautiful and the streets of Copenhagen are colorful and vibrant.

In July 1998 many newspapers published the results of a poll that measured human ignorance. The poll tested thousands of people on questions like; "What's a molecule?" (Only 11% answered correctly!) The poll discovered that only half of the interviewees knew the earth took a year to revolve around the sun and that early humans did not live at the same time as dinosaurs! These were the results for every country tested except for Denmark. Only the Danes scored lower on the worldwide ignorance scale!

When people think of cannibals they envision vicious barbarians living in remote cultures deep in far away jungles. However, anthropologists and historians, such as Will Durant, believe that, "Cannibalism was at one time practically universal." * We are all probably descendants of people who enjoyed human flesh.

But do not think that this cannibalism existed thousands of years ago in the stone age. Pulitzer Prize winner, and perhaps the 20th century's greatest historian, Will Durant wrote that cannibalism took place in Europe, in Denmark at least as late as the eleventh century.**

So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?

Hans Christian Anderson Great Danish story teller and possible cannibal.

Copenhagen, one of the world's most beautiful and livable cities, was built by cannibals.

The beautiful Queen of Denmark, Her Majesty Margethe. Descendant of Cannibals and possibly one herself.

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Color Climax Corporation ApS (**CCC**) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967[3] by the Theander brothers[4] and began with the publication of the porn magazine *ColorClimax*, despite pornography being illegal in Denmark until 1969.[5] It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.

Color Climax

Company type	ApS
Industry	Pornography
Founded	1967; 58 years ago
Founder	Peter Theander[1] Jens Theander[2]
Fate	Defunct (2024)
Headquarters	Copenhagen, Denmark
Products	Pornographic films, pornographic magazines

Films [edit]

In 1969, Denmark legalized the production of all kinds of pornography.[6] In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality,[7] some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.

Child pornography [edit]

Color Climax was the first to produce commercial child pornography films.[6] From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography.[8][9] Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.[9][10]

Between 1971 and 1979, the company produced 10-minute films for its *Lolita* series.[6][10][11] These films featured young girls, mainly with men, but sometimes with women or other children.[6][10][11] The girls were mainly between the ages of 7 and 11 years; however, some were younger.[6][10][11] These movies had titles such as *Incest Family*, *Child Love* and *Pre-Teen Sex*.[6][10]

Private Mohammed Kahn: Civil War Soldier
June 23, 2017 By Matthew Schaefer, Posted In Catalog, Crowdsourcing, DC-Area Researchers, Digitization, Innovation Hub, Uncategorized
Today's post comes from Kate Mersiovsky, National Archives Technician
Since I've become an archives technician in the Innovation Hub Scanning Room at the National Archives, I've seen my fair share of interesting records. Researchers have digitized the pension of presidential widow Lucretia Garfield, the pension of Harriet Tubman, and the Supreme Court cases In Re Gault and U.S. v. Edith Windsor. Recently one of my fellow technicians, Jesse Wilinski, found another unique record- the pension file for Mohammed Kahn, a Muslim soldier who served in the Civil War.
It is rare to find records of Muslim Civil War soldiers in our holdings. So far, Jesse has only encountered two pensions, and historians know of only about 250 Muslim Civil War soldiers in all. This record, therefore, sheds light on a unique perspective that is often overlooked. As a

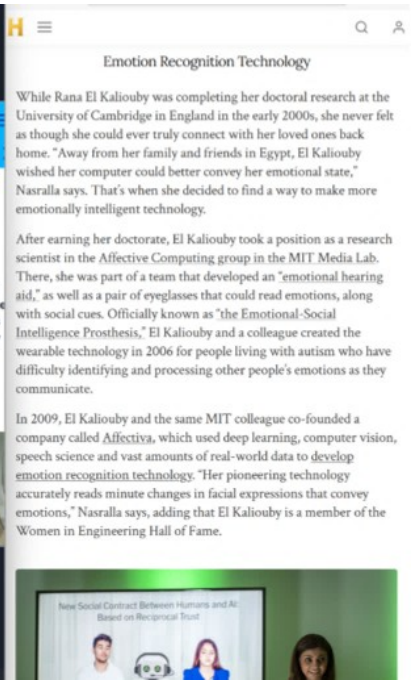
In the Moroccan city of Fez, Fatima al-Fihri founded a mosque which developed into the famous al-Qarawiyyin university. Today it is recognized as the oldest existing university in the world.



Emotion Recognition Technology

While Rana El Kaliouby was completing her doctoral research at the University of Cambridge in England in the early 2000s, she never felt as though she could ever truly connect with her loved ones back home. "Away from her family and friends in Egypt, El Kaliouby wished her computer could better convey her emotional state," Nasralla says. That's when she decided to find a way to make more emotionally intelligent technology.

After earning her doctorate, El Kaliouby took a position as a research scientist in the Affective Computing group in the MIT Media Lab. There, she was part of a team that developed an "emotional hearing aid," as well as a pair of eyeglasses that could read emotions, along with social cues. Officially known as "the Emotional-Social Intelligence Prosthesis," El Kaliouby and a colleague created the wearable technology in 2006 for people living with autism who have difficulty identifying and processing other people's emotions as they communicate.

In 2009, El Kaliouby and the same MIT colleague co-founded a company called Affectiva, which used deep learning, computer vision, speech science and vast amounts of real-world data to develop emotion recognition technology. "Her pioneering technology accurately reads minute changes in facial expressions that convey emotions," Nasralla says, adding that El Kaliouby is a member of the Women in Engineering Hall of Fame.

BJJ.Tips
Mitsuyo Maeda
The Father of Brazilian Jiu-Jitsu
Name: Mitsuyo Maeda
Notable Achievements:
7th Dan Red and Black Belt in Judo
Known for pioneering the art of Judo and Brazilian jiu-jitsu in various countries.
Traveled the world, taking on and defeating numerous challengers in "no-rules" fights.
Played a pivotal role in the development of Brazilian jiu-jitsu, training and sharing knowledge with the Gracie family.
Considered one of the founding figures of modern Brazilian jiu-jitsu.
Lineage: Kano Jigoro --> Mitsuyo Maeda
Mitsuyo Maeda, often called the "Count of Combat," was a true martial arts pioneer who helped spread the arts of Judo and Brazilian jiu-jitsu to different corners of the world. His extensive travels and challenge matches contributed to the development and popularity of these arts, particularly in Brazil, where he played a crucial role in shaping the future of Brazilian jiu-jitsu.
From Wikipedia, the free encyclopedia
The Mahdi (Arabic: ٱلْمَهْدِيّ, romanized: al-Mahdī, lit. 'the Guided') is a figure in Islamic eschatology who is believed to appear at the End of Times to rid the world of evil and injustice. He is said to be a descendant of Muhammad, and will appear shortly before Jesus.
Al-Ma'idah (Arabic: ٱلْمَائِدَة, romanized: al-Mā'idah; lit. 'The Table [Spread with Food]') is the fifth chapter of the Quran, containing 120 verses.

From Wikipedia, the free encyclopedia
Mitsuyo Maeda (前田 光世, Maeda Mitsuyo, November 18, 1878 – November 28, 1941) naturalized as Otávio Maeda (Portuguese pronunciation: [o ˈtavju ma ˈedɐ]),[1] was a Japanese-born judōka and prizefighter in no holds barred competitions. He was known as Count Combat or Conde Koma in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]
Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]
Biography [edit]
Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]
Formative years at the Kodokan [edit]
Arriving in the Kodokan, Maeda, who was 164 centimetres (5 ft 4½ in) tall and weighed 64 kilograms (141 lb; 10 st 1 lb), was confused with a delivery boy due to his country manners and demeanor. He was spoted by judo's founder Kano Jigoro, and assigned to Tsunejiro Tomita (4th dan at the time), the smallest of the teachers of the Kodokan's "Four Heavenly Kings" (Shitennō), to illustrate that in judo size is not important.[1] Tomita was the first Kodokan jucoka and a close friend of Kano. According to Koyasu Masao (9th dan):
Among the four Kodokan shiten-no, it was Tomita who received the greatest amount of teachings from Kano Jigoro sensei ... as a fighter he wasn't so successful as Saigo, Yamashita and Yokoyama, but was exceptional in applied studies and was also fluent in the English language ...[1]
Although the weakest of Kodokan Shitennō, Tomita was able to defeat the great jujutsu champion of that time, Hansuke Nakamura.[1]
With Soishiro Satake, Maeda formed the head of the second generation of Kodokan judoka, which had replaced the first by the beginning of the 20th century.[5] Satake, at 175 cm and 80 kg, was unmatched in amateur sumo but admitted that he himself was not able to match Maeda in judo.[5] Satake would later travel to South America with Maeda and settle in Manaus, Amazonas State, while Maeda continued traveling. Satake would become the founder, in 1914, of the first historically registered judo academy in Brazil. He and Maeda are considered the pioneers of judo in Brazil.[5]
Mitsuyo Maeda
Maeda c. 1910
Born: November 18, 1878, Funazawa Village, Hirosaki, Aomori, Japan
Died: November 28, 1941 (aged 63), Belém, Pará, Brazil, Kidney disease
Other names: Otávio Maeda

BJJ.Tips
Mitsuyo Maeda
The Father of Brazilian Jiu-Jitsu
Name: Mitsuyo Maeda
Notable Achievements:
7th Dan Red and Black Belt in Judo
Known for pioneering the art of Judo and Brazilian jiu-jitsu in various countries.
Traveled the world, taking on and defeating numerous challengers in "no-rules" fights.
Played a pivotal role in the development of Brazilian jiu-jitsu, training and sharing knowledge with the Gracie family.
Considered one of the founding figures of modern Brazilian jiu-jitsu.
Lineage: Kano Jigoro --> Mitsuyo Maeda
Mitsuyo Maeda, often called the "Count of Combat," was a true martial arts pioneer who helped spread the arts of Judo and Brazilian jiu-jitsu to different corners of the world. His extensive travels and challenge matches contributed to the development and popularity of these arts, particularly in Brazil, where he played a crucial role in shaping the future of Brazilian jiu-jitsu.
From Wikipedia, the free encyclopedia
The Mahdi (Arabic: ٱلْمَهْدِيّ, romanized: al-Mahdī, lit. 'the Guided') is a figure in Islamic eschatology who is believed to appear at the End of Times to rid the world of evil and injustice. He is said to be a descendant of Muhammad, and will appear shortly before Jesus.
Al-Ma'idah (Arabic: ٱلْمَائِدَة, romanized: al-Mā'idah; lit. 'The Table [Spread with Food]') is the fifth chapter of the Quran, containing 120 verses.

From Wikipedia, the free encyclopedia
The Skifa Kahla (Arabic: السقيفة الكحلة), also known as Bab Zoula,[1] is a fortification of the 10th century, the structure is one of the few remnants of the ancient walls of Mahdia in Tunisia.[2] The building was built by the Fatimids, in which it was used as the main fort to protect the access to the city.[3] The fort is one of the few remnants of the ancient ramparts, as well as being one of the access points to the historic center of Mahdia.[1]

Ahmed Bllalshb Kahle
INTERNET HALL of FAME
sion to provide "universal access to all
is founder and director of the Internet Archive,
ives World Wide Web documents and makes
Chronicling over 85 billion pieces of deep Web geology (on his Wayback Machine you can view pages as they actually appeared in web antiquity), Kahle has created a veritable history of the Internet's formation, and through his work on the Electronic Frontier Foundation's Board of Directors, he has been instrumental in helping keep such information free and reachable.
After graduating from MIT in 1982, Kahle helped start Thinking Machines, a supercomputer company that built systems for searching large text collections. In 1989, he invented the Internet's first publishing and distributed search system, WAIS (Wide Area Information Server). WAIS Inc. created the online presence for many of the world's largest publishers, and was purchased by America Online in 1995. In 1996, Brewster co-founded Alexa Internet, which provides search and discovery services included in more than 90 percent of web browsers, and was purchased by Amazon in 1999.
Kahle is a key supporter of the Open Content Alliance and has been elected a fellow of the American Academy of Arts and Sciences.

Aylar Lie
Aylar Dianati Lie (Persian: آیلار دیاتی لی; born 12 February 1984)[1] is an Iranian-Norwegian actress, model, singer and former pornographic actress. She has worked as a music video actress and singer, appearing in several of Swedish musician Basshunter's music videos. She became famous after participating in the Norwegian Big Brother.
Early life
Aylar Dianati Lie was born in 1984 in Tehran.She moved to Norway when she was 3 years old. After arriving in Norway, her parents separated and Aylar was placed in the custody of the Child Protective Services. After a few years she was taken into the foster care system. Aylar had moved eighteen times before she began elementary school, and until finally she found foster parents. Her biological mother moved to the United States, while her father remained in constant struggle with the Norwegian authorities.[2]

Tim Berners-Lee
Article Talk
From Wikipedia, the free encyclopedia
Sir Timothy John Berners-Lee (born 8 June 1955),[1] also known as TimBL, is an English computer scientist best known as the inventor of the World Wide Web, the HTML markup language, the URL system, and HTTP. He is a professorial research fellow at the University of Oxford[2] and a professor emeritus at the Massachusetts Institute of Technology (MIT).[3][4]
Berners-Lee proposed an information management system on 12 March 1989[5][6] and implemented the first successful communication between a Hypertext Transfer Protocol (HTTP) client and server via the Internet in mid-November.[7][8][9][10][11] He devised and implemented the first Web browser and Web server and helped foster the Web's subsequent explosive development. He is the founder and emeritus director of the World Wide Web Consortium (W3C), which oversees the continued development of the Web. He co-founded (with Rosemary Leith) the World Wide Web Foundation. In April 2009, he was elected as Foreign Associate of the National Academy of Sciences.[12][13]
Berners-Lee was previously a senior researcher and holder of the 3Com founder's chair at the MIT Computer Science and Artificial Intelligence Laboratory (CSAIL).[14] He is a director of the Web Science Research Initiative

Hatim Zaghloul is the inventor of the well-known daily-used Wi-Fi's WIMAX's and LTE's WOFDM! He is renowned in the field and known among global companies in the field of telecommunications and technology. Hatim decided that he couldn't be stingy with the amount of information he has; so, he contributed to developing the Internet service to increase its speed and using it on mobile phones. In 1989, he joined a Canadian telecom company after he emigrated from Egypt in 1983. There, he established his invention in cooperation with his companion Dr. Micheal Fattoush. What a miraculous career he has.

WiLAN is a technology development and intellectual property licensing company with headquarters in Ottawa, Ontario, Canada.[1] In addition to collaborating with other patent portfolio owners, WiLan licenses its own portfolio of patents. Modern wireless communication methods are continuously researched and developed by WiLAN Labs. A publicly traded company on the Toronto Stock Exchange, Quarterhill Inc.'s principal subsidiary is WiLAN..

Wi-LAN Inc.

Company type	Subsidiary
Industry	Patent monetization
Founded	1992
Founder	Hatim Zaghloul, Michel Fattouche
Headquarters	Ottawa, Ontario, Canada
Area served	Worldwide
Key people	Michael B. Vladescu, President and CEO
Products	Bluetooth, LTE, WiMAX, WiFi, CDMA, DOCSIS
Parent	Quarterhill Inc.
Website	wilan.com

History

In 1992, Hatim Zaghloul and Michel Fattouche co-founded WiLAN[2] after they developed together the Wideband Orthogonal Frequency Division Multiplexing (WOFDM),[3][non-primary source needed] and Multi-code Direct-sequence Spread Spectrum (MCDSSS).[4][non-primary source needed] Through WiLAN's efforts, the Federal Communications Commission (FCC) has allowed OFDM technology over the 2.4 GHz unlicensed ISM band for the Institute of Electrical and Electronics Engineers (IEEE) 802.11 standards. MC DSSS (MultiCode-Direct-sequence Spread Spectrum) is central to high speed CDMA applications, the main technology currently used by many cellphone networks.

In March 1998, WiLAN had its initial public offering.[5]

In November 1999, WiLAN and Philips invited companies to attend a meeting to form an alliance to promote the OFDM technology and its applications.[6] WiLAN was a founding member of the WiMAX Forum together with Ensemble, CossSpan, Harris, and Nokia.

From its founding in 1992 to 2000, WiLAN had success as interest and investment in the tech industry grew. However, in 2000, when the world's first tech bubble collapsed.

According to Dr. Peter Gendelman and Muhammad Hatar, directors of the excavation for the Israel Antiquities Authority, the treasure was probably hidden during one of the more dramatic occurrences in Caesarea's long history – the conquest of Caesarea by the crusaders in the year 1101. Therefore, the coins are estimated to be about 900 years old. It is probable that their owners were killed or sold as slaves and never returned to claim their goods.

Color Climax Corporation ApS (**CCC**) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967[1] by the Theander brothers[2] and began with the publication of the porn magazine *ColorClimax*, despite pornography being illegal in Denmark until 1969.[3] It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.

Color Climax

Company type	ApS
Industry	Pornography
Founded	1967; 58 years ago
Founder	Peter Theander[1] Jens Theander[2]
Fate	Defunct (2024)
Headquarters	Copenhagen, Denmark
Products	Pornographic films, pornographic magazines

Films [edit]

In 1969, Denmark legalized the production of all kinds of pornography.[4] In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality,[7] some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.

Child pornography [edit]

Color Climax was the first to produce commercial child pornography films.[8] From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography.[9][10] Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.[9][10]

Between 1971 and 1979, the company produced 10-minute films for its *Lolita* series.[8][10][11] These films featured young girls, mainly with men, but sometimes with women or other children.[8][10][11] The girls were mainly between the ages of 7 and 11 years; however, some were younger.[8][10][11] These movies had titles such as *Incest Family*, *Child Love* and *Pre-Teen Sex*.[8][10]

(Redirected from Caesar Takeshi)
Tomofumi Murata (村田 友文, Murata Tomofumi) (born August 17, 1955), better known by his ring name Takeshi Caesar (シーザー武志, Shīzā Takeshi), is a Japanese actor, retired kickboxer and the founder of shoot boxing.[1][2][3]
Takeshi Caesar
Born Tomofumi Murata
17 August 1955 (age 69)
Yamaguchi, Japan
Other names Caesar
Nationality Japanese
Division Welterweight
Style Shoot boxing
Career [edit]
Murata started competing in kickboxing at age of 16, being trained in the Nishio Gym. He adopted the name of Takeshi Caesar and won the Asia Pacific Kickboxing Federation Welterweight Championship, making a name for himself. In 1984, he became interested in professional wrestling and was introduced to Satoru Sayama, who trained him in shoot-style at his Super Tiger Gym. Caesar then was contacted by Karl Gotch and Akira Maeda and was part of the Universal Wrestling Federation. After the fall of UWF, his experiences with its wrestling style induced him to creating a similarly mixed style of kickboxing, which he called shootboxing. His company had his first event in 1985, and had working agreements with Newborn UWF and later with Fighting Network RINGS and Pancrase.

Satoru Sayama (佐山 聡, Sayama Satoru) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names Sammy Lee, and masked Super Tiger, Tiger King, Tiger Mask and The Mask of Tiger. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]
He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, one of the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate, and grappling from Wrestling, Judo, and Sambo. The curriculum would help produce the first well rounded fighters of MMA several years before the first UFC event.[4] He is also the founder of the martial art Seikendo and professional wrestling promotion Real Japan Pro Wrestling.

JOURNAL

OF THE

FIRST VOYAGE OF COLUMBUS.

This is the first voyage and the routes and direction taken by the Admiral Don Cristobal Colon when he discovered the Indies, summarized; except the prologue made for the Sovereigns, which is given word for word and commences in this manner.

In the name of our Lord Jesus Christ.

BECAUSE, O most Christian, and very high, very excellent, and puissant Princes, King and Queen of the Spains and of the islands of the Sea, our Lords, in this present year of 1492, after your Highnesses had given an end to the war with the Moors who reigned in Europe, and had finished it in the very great city of Granada, where in this present year, on the second day of the month of January, by force of arms, I saw the royal banners of your Highnesses placed on the towers of Alfambra, which is the fortress of that city, and I saw the Moorish King come forth from the gates of the city and kiss the royal hands of your Highnesses, and of the Prince my Lord, and presently in

This work is in the public domain.

Thursday, 9 August. The Admiral did not succeed in reaching the island of Gomera till Sunday night. Martin Alonzo remained at Grand Canary by command of the Admiral, he being unable to keep the other vessels company. The Admiral afterwards returned to Grand Canary, and there with much labor repaired the Pinta, being assisted by Martin Alonzo and the others; finally they sailed to Gomera. They saw a great eruption of names from the Peak of Teneriffe, a lofty mountain. The Pinta, which before had carried latine sails, they altered and made her square-rigged. Returned to Gomera, Sunday, 2 September, with the Pinta repaired.

The Admiral says that he was assured by many respectable Spaniards, inhabitants of the island of Ferro, who were at Gomera with Dona Inez Peraza, mother of Guillen Peraza, afterwards first Count of Gomera, that every year they saw land to the west of the Canaries; and others of Gomera affirmed the same with the like assurances. The Admiral here says that he remembers, while he was in Portugal, in 1484, there came a person to the King from the island of Madeira, soliciting for a vessel to go in quest of land, which he affirmed he saw every year, and always of the same appearance. He also says that he remembers the same was said by the inhabitants of the Azores and described as in a similar direction, and of the same shape and size. Having taken in food, water, meat and other provisions, which had been provided by the men which he left ashore on departing for Grand Canary to repair the Pinta, the Admiral took his final departure from Gomera with the three vessels on Thursday, 6 September.

* * * * *

Sunday, 9 September. Sailed this day nineteen leagues, and determined to count less than the true number, that the crew might not be dismayed if the voyage should prove long. In the night sailed one hundred and twenty miles, at the rate of ten miles an hour, which make thirty leagues. The sailors steered badly, causing the vessels to fall to leeward toward the northeast, for which the Admiral reprimanded them repeatedly.

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.

Tuesday, 11 September. Steered their course west and sailed above twenty leagues; saw a large fragment of the mast of a vessel, apparently of a hundred and twenty tons, but could not pick it up. In the night sailed about twenty leagues, and reckoned only sixteen, for the cause above stated.

The Mother of Radiation: Marie Curie
Wed, Nov 7, 2018, 7:57AM | ANS Nuclear Cafe | Kaitlyn Butler

The start of Marie Curie's story isn't like most of the other scientists that had made a name for themselves throughout history, mostly because she was a grown woman by the start of the 20th century. But she was the first woman to do a lot of things, including getting a Ph.D. from a university in France, and winning a Nobel Prize. She was also the first person ever to win a Nobel Prize in two different fields of science. To say she pushed the societal and scientific boundaries of her era is an understatement.

Scranton Man Sentenced to 180 Months in Federal Prison for Producing Child Pornography

U.S. Attorney's Office
August 25, 2011

Middle District of Pennsylvania
(717) 221-4482

The United States Attorney's Office for the Middle District of Pennsylvania announced today that Nicholas Pinto, age 30, was sentenced today by Senior United States District Court Judge Edwin M. Kosik to a 180-month term of imprisonment for production of child pornography. Judge Kosik further ordered that Pinto serve a lifetime of supervised release following his release from prison and pay a $1,000 fine.

According to United States Attorney Peter J. Smith, Pinto was indicted on September 2, 2008, following a joint investigation by the Federal Bureau of Investigation and the Scranton Police Department into the production of child pornography. During the course of the investigation, Pinto was identified by several minor victims who reported that Pinto had video taped them on separate occasions engaging in sexually explicit conduct that depicted images of bondage.

A forensic examination was conducted on two digital cameras and a video camera that were seized from Pinto. The examination revealed over 180 sadomasochistic videos involving minor victims, some as young as 4 years old.

On May 12, 2010, Pinto pleaded guilty to production of child pornography.

This case is part of the Project Safe Childhood initiative. In February 2006, the Department of Justice created Project Safe Childhood, a nationwide initiative designed to protect children from online exploitation and abuse. Led by the United States Attorneys Offices, Project Safe Childhood marshals federal, state and local resources to better locate, apprehend, and prosecute individuals who exploit children via the Internet, as well as identify and rescue victims. For more information about Project Safe Childhood, please visit www.projectsafechildhood.gov/.

Assistant United States Attorney Michelle Olshefski prosecuted the case.

From Wikipedia, the free encyclopedia

Yoshiyahu Yosef Pinto (Hebrew: יאשיהו יוסף פינטו, Arabic: يُوشياهو يوسف بينتو; born September 27, 1973)[1] is an Israeli-Moroccan Orthodox rabbi who leads a global organization called Mosdot Shuva Israel [he]. Based in Ashdod and New York City, he is a Kabbalist.[2] *Globes* business journal named him in 2012 as one of the ten wealthiest rabbis in Israel.[3]

As part of a series of legal issues, he pleaded guilty in September 2014 to bribing a high-ranking Israeli police officer. He was sentenced on May 12, 2015, to one year in prison, and to pay a fine of 1 million shekels.[4] He began serving his prison sentence on February 13, 2016.[5] After his release, he became the Chief Rabbi of Morocco in 2019.[6]

Trump pardons accused child pornographer in North Carolina

Mint Hill man is just one of several men that Trump pardoned who have been accused or convicted of sexual abuse.

THOMAS MILLS
JAN 27, 2025

80 22 22 Share

Just a day after taking office, Donald Trump pardoned David Paul Daniel, 37, of Mint Hill. Daniel is accused of manufacturing and possessing child pornography. According to accusations, Dale had sexual relations with two minors and took explicit photos of them. The photos were found on his phone after Daniel was arrested for assaulting Capitol police officers during the January 6 assault on Washington.

According to Law and Crime News and WBTV, a victim accused Daniel of sexually assaulting her multiple times between 2015 and 2019. She also said that Daniel photographed her naked and forced her to take showers with him. Daniel is also being investigated for statutory rape in Forsyth County. That victim's mother says Daniel was sexually active with her minor daughter in the summer of 2022.

Scranton Man Sentenced to 180 Months in Federal Prison for Producing Child Pornography
U.S. Attorney's Office
August 25, 2011
Middle District of Pennsylvania
(717) 221-4482
The United States Attorney's Office for the Middle District of Pennsylvania announced today that Nicholas Pinto, age 30, was sentenced today by Senior United States District Court Judge Edwin M. Kosik to a 180-month term of imprisonment for production of child pornography. Judge Kosik further ordered that Pinto serve a lifetime of supervised release following his release from prison and pay a $1,000 fine.
According to United States Attorney Peter J. Smith, Pinto was indicted on September 2, 2008, following a joint investigation by the Federal Bureau of Investigation and the Scranton Police Department into the production of child pornography. During the course of the investigation, Pinto was identified by several minor victims who reported that Pinto had video taped them on separate occasions engaging in sexually explicit conduct that depicted images of bondage.
A forensic examination was conducted on two digital cameras and a video camera that were seized from Pinto. The examination revealed over 180 sadomasochistic videos involving minor victims, some as young as 4 years old.
On May 12, 2010, Pinto pleaded guilty to production of child pornography.
This case is part of the Project Safe Childhood initiative. In February 2006, the Department of Justice created Project Safe Childhood, a nationwide initiative designed to protect children from online exploitation and abuse. Led by the United States Attorneys Offices, Project Safe Childhood marshals federal, state and local resources to better locate, apprehend, and prosecute individuals who exploit children via the Internet, as well as identify and rescue victims. For more information about Project Safe Childhood, please visit www.projectsafechildhood.gov/.
Assistant United States Attorney Michelle Olshefski prosecuted the case.

Trump pardons accused child pornographer in North Carolina
Mint Hill man is just one of several men that Trump pardoned who have been accused or convicted of sexual abuse.
THOMAS MILLS
Just a day after taking office, Donald Trump pardoned David Paul Daniel, 37, of Mint Hill. Daniel is accused of manufacturing and possessing child pornography. According to accusations, Dale had sexual relations with two minors and took explicit photos of them. The photos were found on his phone after Daniel was arrested for assaulting Capitol police officers during the January 6 assault on Washington.
According to Law and Crime News and WBTV, a victim accused Daniel of sexually assaulting her multiple times between 2015 and 2019. She also said that Daniel photographed her naked and forced her to take showers with him. Daniel is also being investigated for statutory rape in Forsyth County. That victim's mother says Daniel was sexually active with her minor daughter in the summer of 2022.

From Wikipedia, the free encyclopedia

Yoshiyahu Yosef Pinto (Hebrew: יאשיהו יוסף פינטו, Arabic: يوشياهو يوسف بينتو; born September 27, 1973)[1] is an Israeli-Moroccan Orthodox rabbi who leads a global organization called Mosdot Shuva Israel [he]. Based in Ashdod and New York City, he is a Kabbalist.[2] *Globes* business journal named him in 2012 as one of the ten wealthiest rabbis in Israel.[3]

As part of a series of legal issues, he pleaded guilty in September 2014 to bribing a high-ranking Israeli police officer. He was sentenced on May 12, 2015, to one year in prison, and to pay a fine of 1 million shekels.[4] He began serving his prison sentence on February 16, 2016.[5] After his release, he became the Chief Rabbi of Morocco in 2019.[6]

Mitsuyo Maeda
Mitsuyo Maeda (前田 光世, Maeda Mitsuyo, November 18, 1878 – November 28, 1941) naturalized as Otávio Maeda (Portuguese pronunciation: [o ˈtavju ma ˈede]),[1] was a Japanese-born judōka and prizefighter in no holds barred competitions. He was known as Count Combat or Conde Koma in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]
Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]
Biography [edit]
Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenagar, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]
Formative years at the Kodokan [edit]
Arriving in the Kodokan, Maeda, who was 164 centimetres (5 ft 4½ in) tall and weighed 64 kilograms (141 lb; 10 st 1 lb), was confused with a delivery boy due to his country
Maeda c. 1910
Born November 18, 1878 Funazawa Village, Hirosaki, Aomori, Japan
Died November 28, 1941 (aged 63) Belém, Pará, Brazil
Kidney disease
Other names Otávio Maeda

Justice Everywhere
Behind the paywall
In 2011, the 22-year-old Kazakhstani graduate student Alexandra Elbakyan created the well-known site Sci-Hub, in partnership with Library Genesis, known as LibGen. This created a de facto global and free-to-access online scientific library. By making much of the global scientific literature available through a few "clicks" on either one of the platform, Elbakyan radically changed the ability of researchers and the public to access scientific knowledge. Her work was done largely in response to a growing concern that access to scientific research had become prohibitively expensive for many in the global scientific community; Sci-Hub took this research and made it freely accessible to anyone interested in consulting it from anywhere in the world, independently of one's affiliation with a specific higher education institution.
Efforts have been made to counter the publishers' hegemonic economic grip on research by other actors too. In September 2018, the EU made opening access to scientific publications a top priority. Unlike Elbakyan, the EU aims to open access to scientific knowledge through legal means and strategies, complying with publishers' copyright regulations.
However, not everyone agrees that this is appropriate. According to Robert-Jan Smits, the EU's outgoing director-general for research, science, and innovation,
At the moment we are putting a lot of public money at the national, European and global level into science. But we don't

< Professionalism

Sci-Hub is a website established by Alexandra Elbakyan in 2011 that allows users to have free open access to scholarly articles. Elbakyan described the site as "The first pirate website in the world to provide mass and public access to tens of millions of research papers."[1] The website provides access to 85.2% of paywalled articles through the use of institutional networks to gain subscription access to publications.[1] Sci-Hub has been found to provide access to more articles than alternative access websites, including PubMed, ResearchGate, and Google Scholar.[2] While a portion of the institutional credentials is donated to Sci-Hub, others are potentially obtained through hacking or phishing.[3][4] While Sci-Hub has received support in some academic circles for its open access to articles and its opposition to the status quo in publishing, it has also received criticism for its illegality and alleged lack of academic integrity.

Justice Everywhere

Behind the paywall

In 2011, the 22-year-old Kazakhstani graduate student Alexandra Elbakyan created the well-known site Sci-Hub, in partnership with Library Genesis, known as LibGen. This created a *de facto* global and free-to-access online scientific library. By making much of the global scientific literature available through a few "clicks" on either one of the platforms, Elbakyan radically changed the ability of researchers and the public to access scientific knowledge. Her work was done largely in response to a growing concern that access to scientific research had become prohibitively expensive for many in the global scientific community; Sci-Hub took this research and made it freely accessible to anyone interested in consulting it from anywhere in the world, independently of one's affiliation with a specific higher education institution.

Efforts have been made to counter the publishers' hegemonic economic grip on research by other actors too. In September 2018, the EU made opening access to scientific publications a top priority. Unlike Elbakyan, the EU aims to open access to scientific knowledge through legal means and strategies, complying with publishers' copyright regulations.

However, not everyone agrees that this is appropriate. According to Robert-Jan Smits, the EU's outgoing director-general for research, science, and innovation,

Nabu-rimanni (flourished c. 491 BC, Babylonia) was the earliest Babylonian astronomer known by name, who devised the so-called System A, a group of ephemerides, or tables, giving the positions of the Moon, Sun, and planets at any given moment. Based on centuries of observation, these tables were nonetheless somewhat crude and were superseded about a century later by Kidinnu's System B, a refined mathematical method for finding celestial positions more

Aristarchus of Samos
(/ˌærəˈstɑːrkəs/; Ancient Greek: Ἀρίσταρχος ὁ Σάμιος, *Aristarkhos ho Samios*; c. 310 – c. 230 BC) was an ancient Greek astronomer and mathematician who presented the first known heliocentric model that placed the Sun at the center of the universe, with the Earth revolving around the Sun once a year and rotating about its axis once a day. He also supported the theory of Anaxagoras according to which the Sun was just another star.[2]

He likely moved to Alexandria, and he was a student of Strato of Lampsacus, who later became the third head of the Peripatetic School

Aristarchus of Samos

Statue of Aristarchus of Samos at the Aristotle University of Thessaloniki

(/ˌærəˈstɑːrkəs/; Ancient Greek: Ἀρίσταρχος ὁ Σάμιος, *Aristarkhos ho Samios*; c. 310 – c. 230 BC) was an ancient Greek astronomer and mathematician who presented the first known heliocentric model that placed the Sun at the center of the universe, with the Earth revolving around the Sun once a year and rotating about its axis once a day. He also supported the theory of Anaxagoras according to which the Sun was just another star.[2]

He likely moved to Alexandria, and he was a student of Strato of Lampsacus, who later became the third head of the Peripatetic School

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Cannibalism in the Americas has been practiced in many places throughout much of the history of North America and South America. The modern term "cannibal" is derived from the name of the Island Caribs (Kalinago), who were encountered by Christopher Columbus in The Bahamas. While numerous cultures in the Americas were reported by European explorers and colonizers to have engaged in cannibalism, some of these claims may be unreliable since the Spanish Empire used them to justify conquest.[1]

A scene depicting ritualistic Aztec cannibalism being practiced in the Codex Magliabechiano, folio 73r.

At least some cultures have been physically and archeologically proven beyond any doubt whatsoever to have undertaken institutionalized cannibalism. This includes human bones uncovered

The Wari people and funerary cannibalism

The Wari people of the Amazon, Brazil, are known for practicing compassionate funerary cannibalism as recently as the 1960's. It was their cultural norm for the in-laws of the deceased to consume the body at the funeral. Why did they do this? It was not to do with taking on the essence, knowledge or power of the dead. Nor was it nutritional. Nor was it aggressive. Instead it is to do with radically different way that the Wari see the body and a person's identity.

What the notorious flesh-eating Aghor religion of India is really like

June 16, 2017

Perspective by MayYing Lam and Tamara Merino

On the other side of the Ganges River in Varanasi, India, lies a white sand beach, where Aghors perform rituals during the new moon. Baba Ram Mahesh, on the left, and his disciple Pandi are performing the Puja, a ritual based on chanting mantras and offering alcohol and cannabis to the sacred fire, as their god, Shiva, used to do. (Tamara Merino)

3 The Mai-Mai In The Congo Eat The Dead To Gain Their Knowledge

Photo: AMURI ALEKA,MONUSCO Force / Wikimedia Commons / CC BY 2.0

Congo's Mai-Mai people are essentially community-based militias who are bound together in order to keep their homes from being taken over by a variety of armed groups.

Some are led by warlords, traditional tribal elders, or village heads, but they all take part in the ritual cannibalism of their enemies because they believe it brings them special powers.

Dear friends of WISH CNY,

You may have noticed the past few weeks that we have been featuring both men and women in our posts. This is because we have changed our membership (and our name) to be non-gendered! We are now "**We of Italian and Syracuse and Heritage CNY**."

The founding members began this group with the immediate goals of replacing the statue of Christopher Columbus (Cristoffa Corombo) in the city center of Syracuse NY, challenging oppressive patriarchal representations of Italian and Italian-American histories, and supporting healing changes to statue culture in the US. We are embracing the universal need for solidarity.

We are accepting new members regardless of gender orientation- and you don't have to be of Italian ancestry either, but you should have a strong connection to Syracuse, NY and care about Italian culture and history.

Join us for as we continue:

- Engaging in community dialogue and leadership to remove and replace the Columbus

U.S. Attorney's Office, Western District of Missouri

JEFFERSON CITY, Mo. – A former corrections officer at the Jefferson City Correctional Center and his wife were sentenced in federal court today to charges related to video recording their sexual assault of a 4-year-old victim.

Paul Emerson Schofield, 35, and his wife, Sara Ellen Schofield, 31, both of Jefferson City, were sentenced in separate appearances before U.S. District Judge Brian C. Wimes. Paul Schofield was sentenced to 40 years in federal prison without parole. Sara Schofield was sentenced to 35 years in federal prison without parole. The court also sentenced the Schofields to spend the rest of their lives on supervised release following incarceration.

On Nov. 7, 2023, the Schofields each pleaded guilty to one count of conspiracy to produce child pornography

On Nov. 7, 2023, the Schofields each pleaded guilty to one count of conspiracy to produce child pornography and one count of producing child pornography. The Schofields, who have been in federal custody without bond since their arrests in 2022, admitted they participated in a conspiracy to produce child pornography over a nearly three-year period from July 29, 2019, to June 7, 2022. A 4-year old victim was used to produce child pornography.

Scofield is charged with promoting an obscene sexual performance of a child less than 17, possession of an obscene sexual performance by a child less than 16 and possessing a sexual performance by a child less than 16. State police previously arrested her last October when they say an initial investigation allegedly found her in possession of child pornography.

The Ulster County District Attorney's Office says the couple were found with hundreds of images depicting child sex abuse. They say some of the images were shared to others by text and through social media platforms.

News 12 confirmed with state police that Child Protective Services has been notified in the case.

According to a Times Union report, prosecutors said during their arraignment in City of Kingston Court on Tuesday that some of the images depicted necrophilia, beastiality and bondage - possibly involving children as young as 4 years old. State police have not confirmed that information.

State police say they first began investigating the couple after receiving a tip from the National Center for Missing and Exploited Children that Boyle and Scofield were exchanging indecent material involving minors online.

Boyle and his wife pleaded not guilty. He was ordered to be held at Ulster County Jail on $200,000 bond, which was immediately posted. Online records also show Scofield was not remanded to the facility.

Scofield declined to comment at the couple's residence. Neighbors tell News 12 the couple have two young children and that police were recently seen at their home.

"I saw a bunch of cops and FBI. There were a lot of cops and people in suits," says one neighbor

Hans Christian Anderson Great Danish story teller and possible cannibal.

So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?

Copenhagen, one of the world's most beautiful and livable cities, was built by cannibals.

The beautiful Queen of Denmark, Her Majesty Margethe. Descendant of Cannibals and possibly one herself.

From Wikipedia, the free encyclopedia

"Bob Kahn" redirects here. For the comic artist born "Robert Kahn", see, see Bob Kane.

Robert Elliot Kahn (born December 23, 1938) is an American electrical engineer who, along with Vint Cerf, first proposed the Transmission Control Protocol (TCP) and the Internet Protocol (IP), the fundamental communication protocols at the heart of the Internet.

Robert Kahn

In 2004, Kahn won the Turing Award with Vint Cerf for their work on TCP/IP.[1]

Dr. Vinton Cerf and Dr. Robert Kahn
Medal of Freedom Recipients

Vinton Cerf and Robert Kahn designed the software code that is used to transmit data over the Internet. Dr. Cerf and Dr. Kahn have been at the forefront of a digital revolution that has transformed global commerce, communication, and entertainment.

Dr. Vinton G. Cerf
Vice President and Chief Internet Evangelist, Google

Vinton G. Cerf is vice president and Chief Internet Evangelist for Google. He is responsible for identifying new enabling technologies and applications on the Internet and other platforms for the company. Widely known as a "Father of the Internet," Vint is the co-designer with Robert Kahn of TCP/IP protocols and basic architecture of the Internet.

In 1997, President Clinton recognized their work with the U.S. National Medal of Technology. In 2005, Vint and Bob received the highest civilian honor bestowed in the U.S., the Presidential Medal of Freedom. It recognizes the fact that their work on the software code used to transmit data across the Internet has put them "at the forefront of a digital revolution that has transformed global commerce, communication, and entertainment."

From 1994-2005, Vint served as Senior Vice President at MCI. Prior to that, he was Vice President of the Corporation for National Research Initiatives (CNRI), and from 1982-86 he served as Vice President of MCI. During his tenure with the U.S. Department of Defense's Advanced Research Projects Agency (DARPA) from 1976-1982, Vint played a key role leading the development of Internet and Internet-related data packet and security technologies.

Private Mohammed Kahn: Civil War Soldier

June 23, 2017 By Matthew Schaefer, Posted In Catalog, Crowdsourcing, DC-Area Researchers, Digitization, Innovation Hub, Uncategorized

Today's post comes from Kate Mersiovsky, National Archives Technician

Since I've become an archives technician in the Innovation Hub Scanning Room at the National Archives, I've seen my fair share of interesting records. Researchers have digitized the pension of presidential widow Lucretia Garfield, the pension of Harriet Tubman, and the Supreme Court cases In Re Gault and U.S. v. Edith Windsor. Recently one of my fellow technicians, Jesse Wilinski, found another unique record- the pension file for Mohammed Kahn, a Muslim soldier who served in the Civil War.

It is rare to find records of Muslim Civil War soldiers in our holdings. So far, Jesse has only encountered two pensions, and historians know of only about 250 Muslim Civil War soldiers in all. This record, therefore, sheds light on a unique perspective that is often overlooked. As a

Guthrum (died 890) was a leader of a major Danish invasion of Anglo-Saxon England who waged war against the West Saxon king Alfred the Great (reigned 871–899) and later made himself king of East Anglia (reigned 880–890).
Guthrum went to England in the great Danish invasion of 865, and in mid-January 878 he attacked Alfred's kingdom of Wessex. Although all Wessex was overrun, a successful counterattack by Alfred in May brought Guthrum to terms. While negotiations were

Emotion Recognition Technology

While Rana El Kaliouby was completing her doctoral research at the University of Cambridge in England in the early 2000s, she never felt as though she could ever truly connect with her loved ones back home. "Away from her family and friends in Egypt, El Kaliouby wished her computer could better convey her emotional state," Nasralla says. That's when she decided to find a way to make more emotionally intelligent technology.

After earning her doctorate, El Kaliouby took a position as a research scientist in the Affective Computing group in the MIT Media Lab. There, she was part of a team that developed an "emotional hearing aid," as well as a pair of eyeglasses that could read emotions, along with social cues. Officially known as "the Emotional-Social Intelligence Prosthesis," El Kaliouby and a colleague created the wearable technology in 2006 for people living with autism who have difficulty identifying and processing other people's emotions as they communicate.

In 2009, El Kaliouby and the same MIT colleague co-founded a company called Affectiva, which used deep learning, computer vision, speech science and vast amounts of real-world data to develop emotion recognition technology. "Her pioneering technology accurately reads minute changes in facial expressions that convey emotions," Nasralla says, adding that El Kaliouby is a member of the Women in Engineering Hall of Fame.

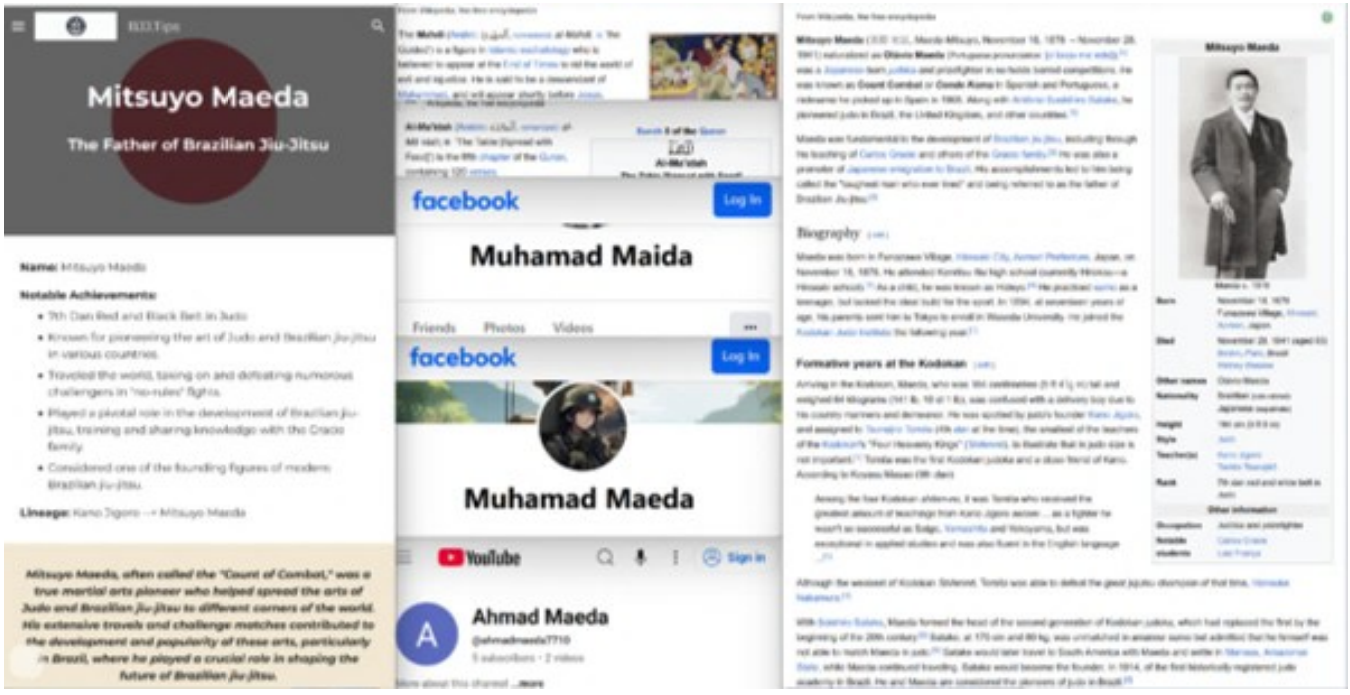
Biography
Formative years at the Kodokan



Mitsuyo Maeda
The Father of Brazilian Jiu-Jitsu
Name: Mitsuyo Maeda
Notable Achievements:
7th Dan Red and Black Belt in Judo
Known for pioneering the art of Judo and Brazilian Jiu-Jitsu in various countries
Traveled the world, taking on and defeating numerous challengers in "no-rules" fights.
Played a pivotal role in the development of Brazilian Jiu-Jitsu, training and sharing knowledge with the Gracie family
Considered one of the founding figures of modern Brazilian Jiu-Jitsu
Lineage: Kano Jigoro → Mitsuyo Maeda
Mitsuyo Maeda, often called the "Count of Combat," was a true martial arts pioneer who helped spread the arts of Judo and Brazilian Jiu-Jitsu to different corners of the world. His extensive travels and challenge matches contributed to the development and popularity of these arts, particularly in Brazil, where he played a crucial role in shaping the future of Brazilian Jiu-Jitsu.

Formative years at the Kodokan

Mitsuyo Maeda

Conde Koma

Treinando a chave de braço, em foto raríssima. Reprodução do livro "Defensa Personal – El Ju Jiutsu al alcance de todos"

5 / 9

Grande mestre Mitsuyo Maeda (1878-1941) aprendeu Jiu-Jitsu no Japão, ganhou o apelido de Conde Koma na Espanha, venceu centenas de utas em Cuba e disseminou seus conhecimentos no Brasil, para alunos promissores como o jovem Carlos Gracie, em Belém do Pará.

Nascido na pequena Aomori, Maeda era conhecido como "Menino Sumô", graças ao seu fascínio pela modalidade ensinada pelo pai. Anos depois, foi estudar em Tóquio, conheceu o Jiu-Jitsu original, treinou com Jigoro Kano e se apaixonou pela arte suave.

Segundo pesquisadores, Mitsuyo Maeda recebeu a faixa-preta aos 20 anos, no dia 25 de dezembro de 1898, na célebre escola Kodokan. Para ser graduado, Maeda precisou vencer 15 oponentes no mesmo dia.

From Wikipedia, the free encyclopedia
Vinton Gray Cerf (/sɜːrf/; born June 23, 1943) is an American Internet pioneer and is recognized as one of "the fathers of the Internet", sharing this title with TCP/IP co-developer Robert Kahn.[2][3][4][5][6][7]
He has received honorary degrees and awards that include the National Medal of Technology,[8] the Turing Award,[11] the Presidential Medal of Freedom,[12] the Marconi Prize, and membership in the National Academy of Engineering.
Life and career [edit]
Vinton Gray Cerf was born in New Haven,
Vinton Cerf in Vilnius, September 2010
Connecticut, on June 23, 1943, the son of Muriel (née Gray) and Vinton Thruston Cerf.[13][14] His mother was born in Canada and was of British, Irish, and French Canadian descent.[15] His paternal ancestors emigrated from Alsace–Lorraine to Kentucky.[16] Cerf attended Van Nuys High School with Steve Crocker and Jon Postel. While in high school, Cerf worked

From Wikipedia, the free encyclopedia
The Skifa Kahla (Arabic: السقيفة الكحلة), also known as Bab Zoulla,[1] is a fortification of the 10th century, the structure is one of the few remnants of the ancient walls of Mahdia in Tunisia.[2] The building was built by the Fatimids, in which it was used as the main fort to protect the access to the city.[3] The fort is one of the few remnants of the ancient ramparts, as well as being one of the access points to the historic center of Mahdia.[1]

is founder and director of the Internet Archive,
ives World Wide Web documents and makes
Chronicling over 85 billion pieces of deep Web geology (on his Wayback Machine you can view pages as they actually appeared in web antiquity), Kahle has created a veritable history of the Internet's formation, and through his work on the Electronic Frontier Foundation's Board of Directors, he has been instrumental in helping keep such information free and reachable.
After graduating from MIT in 1982, Kahle helped start Thinking Machines, a supercomputer company that built systems for searching large text collections. In 1989, he invented the Internet's first publishing and distributed search system, WAIS (Wide Area Information Server). WAIS Inc. created the online presence for many of the world's largest publishers, and was purchased by America Online in 1995. In 1996, Brewster co-founded Alexa Internet, which provides search and discovery services included in more than 90 percent of web browsers, and was purchased by Amazon in 1999.
Kahle is a key supporter of the Open Content Alliance and has been elected a fellow of the American Academy of Arts and Sciences.

Tim Berners-Lee
From Wikipedia, the free encyclopedia
Sir Timothy John Berners-Lee (born 8 June 1955), also known as TimBL, is an English computer scientist best known as the inventor of the World Wide Web, the HTML markup language, the URL system, and HTTP. He is a professorial research fellow at the University of Oxford and a professor emeritus at the Massachusetts Institute of Technology (MIT).
Berners-Lee proposed an information management system on 12 March 1989 and implemented the first successful communication between a Hypertext Transfer Protocol (HTTP) client and server via the Internet in mid-November.
He devised and implemented the first Web browser and Web server and helped foster the Web's subsequent explosive development. He is the founder and emeritus director of the World Wide Web Consortium (W3C), which oversees the continued development of the Web. He co-founded (with Rosemary Leith) the World Wide Web Foundation. In April 2009, he was elected as Foreign Associate of the National Academy of Sciences.
Berners-Lee was previously a senior researcher and holder of the 3Com founder's chair at the MIT Computer Science and Artificial Intelligence Laboratory (CSAIL). He is a director of the Web Science Research Initiative

Aylar Lie
Aylar Dianati Lie (Persian: آیلار دیاتی لی; born 12 February 1984)[1] is an Iranian-Norwegian actress, model, singer and former pornographic actress. She has worked as a music video actress and singer, appearing in several of Swedish musician Basshunter's music videos. She became famous after participating in the Norwegian Big Brother.
Early life
Aylar Dianati Lie was born in 1984 in Tehran.She moved to Norway when she was 3 years old. After arriving in Norway, her parents separated and Aylar was placed in the custody of the Child Protective Services. After a few years she was taken into the foster care system. Aylar had moved eighteen times before she began elementary school, and until finally she found foster parents. Her biological mother moved to the United States, while her father remained in constant struggle with the Norwegian authorities.[2]

Company type	Subsidiary
Industry	Patent monetization
Founded	1992
Founder	Hatim Zaghloul Michel Fattouche
Headquarters	Ottawa, Ontario, Canada
Area served	Worldwide
Key people	Michael B. Vladescu, President and CEO
Products	Bluetooth, LTE, WiMAX, WiFi, CDMA, DOCSIS
Parent	Quarterhill Inc.
Website	wilan.com

History

In 1992, Hatim Zaghloul and Michel Fattouche co-founded WiLAN[2] after they developed together the Wideband Orthogonal Frequency Division Multiplexing (WOFDM),[3][non-primary source needed] and Multi-code Direct-sequence Spread Spectrum (MCDSSS).[4][non-primary source needed] Through WiLAN's efforts, the Federal Communications Commission (FCC) has allowed OFDM technology over the 2.4 GHz unlicensed ISM band for the Institute of Electrical and Electronics Engineers (IEEE) 802.11 standards. MC-DSSS (MultiCode-Direct-sequence Spread Spectrum) is central to high speed CDMA applications, the main technology currently used by many cellphone networks.

In March 1998, WiLAN had its initial public offering.[5]

In November 1999, WiLAN and Philips invited companies to attend a meeting to form an alliance to promote the OFDM technology and its applications.[6] WiLAN was a founding member of the WiMAX Forum together with Ensemble, CossSpan, Harris, and Nokia.

From its founding in 1992 to 2000, WiLAN had success as interest and investment in the tech industry grew. However, in 2000, when the world's first tech bubble collapsed,

Hatim Zaghloul is the inventor of the well-known daily-used Wi-Fi's WiMAX's and LTE's WOFDM! He is renowned in the field and known among global companies in the field of telecommunications and technology. Hatim decided that he couldn't be stingy with the amount of information he has; so, he contributed to developing the Internet service to increase its speed and using it on mobile phones. In 1989, he joined a Canadian telecom company after he emigrated from Egypt in 1983. There, he established his invention in cooperation with his companion Dr. Micheal Fattoush. What a miraculous career he has.

According to Dr. Peter Gendelman and Muhammad Hatar, directors of the excavation for the Israel Antiquities Authority, the treasure was probably hidden during one of the more dramatic occurrences in Caesarea's long history – the conquest of Caesarea by the crusaders in the year 1101. Therefore, the coins are estimated to be about 900 years old. It is probable that their owners were killed or sold as slaves and never returned to claim their goods.

Color Climax Corporation ApS (CCC) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967 by the Theander brothers and began with the publication of the porn magazine ColorClimax, despite pornography being illegal in Denmark until 1969. It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken cown over concerns related to its history of involvement in child pornography.

Company type ApS
Industry Pornography
Founded 1967; 58 years ago
Founder Peter Theander
Jens Theander
Fate Defunct (2024)
Headquarters Copenhagen, Denmark
Products Pornographic films, pornographic magazines
Films [edit]
In 1969, Denmark legalized the production of all kinds of pornography. In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality, some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.
Child pornography [edit]
Color Climax was the first to produce commercial child pornography films. From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography. Danish laws on pornography had been totally repealed since 1569, only punishing with modest fines those making obscene material with children.
Between 1971 and 1979, the company produced 10-minute films for its Lolita series. These films featured young girls, mainly with men, but sometimes with women or other children. The girls were mainly between the ages of 7 and 11 years; howeve; some were younger. These movies had titles such as Incest Family, Child Love and Pre-Teen Sex.

(Redirected from Caesar Takeshi)

Tomofumi Murata (村田 友文, *Murata Tomofumi*) (born August 7, 1955), better known by his ring name **Takeshi Caesar** (シーザー武志, *Shīzā Takeshi*), is a Japanese actor, retired kickboxer and the founder of shoot boxing.[1][2][3]

Takeshi Caesar	
Born	Tomofumi Murata 17 August 1955 (age 69) Yamaguchi, Japan
Other names	Caesar
Nationality	Japanese
Division	Welterweight
Style	Shoot boxing

Career [edit]

Murata started competing in kickboxing at age of 16, being trained in the Nishio Gym. He adopted the name of **Takeshi Caesar** and won the Asia Pacific Kickboxing Federation Welterweight Championship, making a name for himself. In 1984, he became interested in professional wrestling and was introduced to Satoru Sayama, who trained him in shoot-style at his Super Tiger Gym. Caesar then was contacted by Karl Gotch and Akira Maeda and was part of the Universal Wrestling Federation. After the fall of UWF, his experiences with its wrestling style induced him to creating a similarly mixed style of kickboxing, which he called shootboxing. His company had his first event in 1985, and had working agreements with Newborn UWF and later with Fighting Network RINGS and Pancrase.

Championships and accomplishments [edit]

- **Asia Pacific Kickboxing Federation**
  - APKF Welterweight Championship (1 time) [citation needed]
  - APKF Middleweight championship (1 time) [citation needed]
- **Japan Shootboxing Association**
  - JSBA Hawkweight 1st champion (1986) [citation needed]
- **World Shootboxing Association**
  - WSBA Hawkweight 1st champion (1988) [citation needed]

Kickboxing record [edit]

Takeshi Caesar kickboxing record

Date	Result	Opponent	Event	Location	Method	Round	Time	Record

Satoru Sayama (佐山 聡, *Sayama Satoru*) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names **Sammy Lee**, and masked **Super Tiger**, **Tiger King**, **Tiger Mask** and **The Mask of Tiger**. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]

He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, one of the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate, and grappling from Wrestling, Judo, and Sambo. The curriculum would help produce the first well rounded fighters of MMA several years before the first UFC event.[4] He is also the founder of the martial art Seikendo and professional wrestling promotion Real Japan Pro Wrestling.

Professional wrestling and martial arts career [edit]

Early career; New Japan Pro-Wrestling and excursion (1976–1981) [edit]

Sayama debuted in New Japan Pro-Wrestling, against Shoji Kai (Kanji Kitazawa).

Antonio Inoki (アントニオ猪木, *Antonio Inoki*), born **Kanji Inoki** (Japanese: 猪木寛至, Hepburn: *Inoki Kanji*) and later **Muhammad Hussain Inoki** (Arabic: محمد حسين إينوكي, romanized: *Muhamad Husayn Aynwky*); February 20, 1943 – October 1, 2022) was a Japanese professional wrestler, professional wrestling trainer, martial artist, politician, and promoter of professional wrestling and mixed martial arts (MMA). He is best known as the founder and 33-year owner of New Japan Pro-Wrestling (NJPW). He is considered to be one of the most influential professional wrestlers of all time,[7][8][9] and one of the biggest key influences on MMA in Japan and internationally.[10][9] competitions and solidified Inoki's status as a pioneer in the MMA world.

The Mother of Radiation: Marie Curie

Wed, Nov 7, 2018, 7:57AM ANS Nuclear Cafe | Kaitlyn Butler

The start of Marie Curie's story isn't like most of the other scientists that had made a name for themselves throughout history, mostly because she was a grown woman by the start of the 20th century. But she was the first woman to do a lot of things, including getting a Ph.D. from a university in France, and winning a Nobel Prize. She was also the first person ever to win a Nobel Prize in two different fields of science. To say she pushed the societal and scientific boundaries of her era is an understatement.

Scranton Man Sentenced to 180 Months in Federal Prison for Producing Child Pornography

U.S. Attorney's Office
August 25, 2021

Middle District of Pennsylvania

The United States Attorney's Office for the Middle District of Pennsylvania announced today that Nicholas Pinto, age 30, was sentenced today by Senior United States District Court Judge Edwin M. Kosik to a 180-month term of imprisonment for production of child pornography. Judge Kosik further ordered that Pinto serve a lifetime of supervised release following his release from prison and pay a $5,000 fine.

According to United States Attorney Peter J. Smith, Pinto was indicted on September 2, 2008, following a joint investigation by the Federal Bureau of Investigation and the Scranton Police Department into the production of child pornography. During the course of the investigation, Pinto was identified by several minor victims who reported that Pinto had video taped them on separate occasions engaging in sexually explicit conduct that depicted images of bondage.

A forensic examination was conducted on two digital cameras and a video camera that were seized from Pinto. The examination revealed over 180 sadomasochistic videos involving minor victims, some as young as 4 years old.

On May 12, 2010, Pinto pleaded guilty to production of child pornography.

This case is part of the Project Safe Childhood initiative. In February 2006, the Department of Justice created Project Safe Childhood, a nationwide initiative designed to protect children from online exploitation and abuse. Led by the United States Attorneys Offices, Project Safe Childhood marshals federal, state and local resources to better locate, apprehend, and prosecute individuals who exploit children via the Internet, as well as identify and rescue victims. For more information about Project Safe Childhood, please visit www.projectsafechildhood.gov.

Assistant United States Attorney Michelle Olshefski prosecuted the case.

Yoshiyahu Yosef Pinto

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Yoshiyahu Yosef Pinto (Hebrew: יוסף יצחק פינטו, Arabic: يوشياهو يوسف بنتو; born September 27, 1973)[1] is an Israeli-Moroccan Orthodox rabbi who leads a global organization called Mosdot Shuva Israel [he]. Based in Ashdod and New York City, he is a Kabbalist.[2] Globes business journal named him in 2012 as one of the ten wealthiest rabbis in Israel.[3]

As part of a series of legal issues, he pleaded guilty in September 2014 to bribing a high-ranking Israeli police officer. He was sentenced on May 12, 2015, to one year in prison, and to pay a fine of 1 million shekels.[4] He began serving his prison sentence on February 16, 2016.[5] After his release, he became the Chief Rabbi of Morocco in 2019.[6]

Rabbi Yoshiyahu Yosef Pinto

Biography [edit]

Yoshiyahu Yosef Pinto was born in Israel to Moroccan parents.[7] On his father's side, he is the great-grandson of Chaim Pinto, a Moroccan sage;[7][8][unreliable source?] on his mother's side, he is the great-grandson of Rabbi Yisrael Abuhatzeira, also known as the Baba Sali.[9][10]

Pinto graduated from Ashkenazi Lithuanian yeshivas, and studied under Ashkenazi and Hassidic rabbis.[7][11] Pinto was also influenced by Satmar Hassidism and its teachings.[12]

Trump pardons accused child pornographer in North Carolina

Mint Hill man is just one of several men that Trump pardoned who have been accused or convicted of sexual abuse.

THOMAS MILLS

Just a day after taking office, Donald Trump pardoned David Paul Daniel, 37, of Mint Hill. Daniel is accused of manufacturing and possessing child pornography. According to accusations, Dale had sexual relations with two minors and took explicit photos of them. The photos were found on his phone after Daniel was arrested for assaulting Capitol police officers during the January 6 assault on Washington.

According to Law and Crime News and WBTV, a victim accused Daniel of sexually assaulting her multiple times between 2015 and 2019. She also said that Daniel photographed her naked and forced her to take showers with him. Daniel is also being investigated for statutory rape in Forsyth County. That victim's mother says Daniel was sexually active with her minor daughter in the summer of 2022.

Buzz Aldrin- 2005 Horatio Alger Award
Edwin Eugene "Buzz" Aldrin Jr. was born in 1930 in Montclair, New Jersey, the youngest of three children and the only boy. His father, an aviation pioneer in the U.S. Army Air Corps, entered the reserves in the late 1920s and became an aviation fuel expert for Standard Oil Company. His father's skills as a World War II pilot led young Aldrin to dream of becoming a pilot.
During Aldrin's childhood, his father was called back into wartime service. His father's visits home were always short, and Aldrin felt that although his father was interested in him, his father was often emotionally remote. Aldrin's mother suffered from periodic depression and a dependency on alcohol. In the often-closed society that was suburban postwar America, people rarely discussed such afflictions openly. Aldrin's early adulthood became marked and scarred by his mother's withdrawal and her inability to provide emotional support. Aldrin inherited his mother's shyness, but he had an inquisitive nature. His ability to focus his attention on a problem until he found a solution developed his creativity

Aldrin, Buzz
Person
Dates
Existence: January 20, 1930-
Biographical Information
Edwin Eugene (Buzz) Aldrin, Jr. was born on January 20, 1930 in Montclair, New Jersey. He was nicknamed "Buzz" by his sister. His mother, Marion Moon, was the daughter of an army chapain. His father, Air Force Colonel Edwin Eugene Aldrin, Sr., was a former student of rocket scientist Robert Goddard, and an aviation pioneer in his own right.
Aldrin graduated from the United States Military Academy at West Point in 1951, ranking third in his graduating class. After graduation, Aldrin was as an officer in the Air Force. A year later he was sent to Korea as a fighter pilot. He completed 66 fighter missions during the Korean War, and was awarded the Distinguished Flying Cross. He then served as an Air Force instructor in Nevada before being assigned to the Air Force Academy as an aide and later a flight instructor. In 1956, he became a flight commander for a squadron in West Germany.
In 1959, Aldrin became interested in the developing U.S. space program. He enrolled in an engineering program at the Massachusetts Institute of Technology and graduated in 1963 with a Doctor of Science degree in Orbital Mechanics; his thesis dealt with the piloting and rendezvous of two spacecraft in orbit.
Aldrin was selected to be in NASA's third group of astronauts in October of 1963. Aldrin was the first astronaut to hold a doctoral degree and the only astronaut who was not a test pilot. Aldrin's first space mission was Gemini 12, which was with Jim Lovell, Jr. in November of 1966. During this flight, Aldrin established a new record for extra vehicular activity.
Following completion of the Gemini missions, the race was on between the United States and Russia to see who would reach the moon first. Aldrin completed many more hours of training to prepare for his role in different Apollo spaceflights. In 1969, Neil Armstrong, Michael Collins and Aldrin were chosen as the Apollo 11 crew. The United States was ready to launch a lunar landing flight. On July 20th, 1969, at 4:17 p.m., the Eagle landed on the Moon.
Aldrin resigned from NASA in 1971. Shortly afterwards he retired from the Air Force.

He then served as an Air Force instructor in Nevada before being assigned to the Air Force Academy as an aide and later a flight instructor. In 1956, he became a flight commander for a squadron in West Germany.
In 1959, Aldrin became interested in the developing U.S. space program. He enrolled in an engineering program at the Massachusetts Institute of Technology and graduated in 1963 with a Doctor of Science degree in Orbital Mechanics; his thesis dealt with the piloting and rendezvous of two spacecraft in orbit.
Aldrin was selected to be in NASA's third group of astronauts in October of 1963. Aldrin was the first astronaut to hold a doctoral degree and the only astronaut who was not a test pilot. Aldrin's first space mission was Gemini 12, which was with Jim Lovell, Jr. in November of 1966. During this flight, Aldrin established a new record for extra vehicular activity.
Following completion of the Gemini missions, the race was on between the United States and Russia to see who would reach the moon first. Aldrin completed many more hours of training to prepare for his role in different Apollo spaceflights. In 1969, Neil Armstrong, Michael Collins and Aldrin were chosen as the Apollo 11 crew. The United States was ready to launch a lunar landing flight. On July 20th, 1969, at 4:17 p.m., the Eagle landed on the Moon.
Aldrin resigned from NASA in 1971. Shortly afterwards he retired from the Air Force.

Buzz Aldrin- 2005 Horatio Alger Award
Edwin Eugene "Buzz" Aldrin Jr. was born in 1930 in Montclair, New Jersey, the youngest of three children and the only boy. His father, an aviation pioneer in the U.S. Army Air Corps, entered the reserves in the late 1920s and became an aviation fuel expert for Standard Oil Company. His father's skills as a World War II pilot led young Aldrin to dream of becoming a pilot.
During Aldrin's childhood, his father was called back into wartime service. His father's visits home were always short, and Aldrin felt that although his father was interested in him, his father was often emotionally remote. Aldrin's mother suffered from periodic depression and a dependency on alcohol. In the often-closed society that was suburban postwar America, people rarely discussed such afflictions openly. Aldrin's early adulthood became marked and scarred by his mother's withdrawal and her inability to provide emotional support. Aldrin inherited his mother's shyness, but he had an inquisitive nature. His ability to focus his attention on a problem until he found a solution developed his creativity

Biographical Information
Edwin Eugene (Buzz) Aldrin, Jr. was born on January 20, 1930 in Montclair, New Jersey. He was nicknamed "Buzz" by his sister. His mother, Marion Moon, was the daughter of an army chaplain. His father, Air Force Colonel Edwin Eugene Aldrin, Sr., was a former student of rocket scientist Robert Goddard, and an aviation pioneer in his own right.
Aldrin graduated from the United States Military Academy at West Point in 1951, ranking third in his graduating class. After graduation, Aldrin was as an officer in the Air Force. A year later he was sent to Korea as a fighter pilot. He completed 66 fighter missions during the Korean War, and was awarded the Distinguished Flying Cross. He then served as an Air Force instructor in Nevada before being assigned to the Air Force Academy as an aide and later a flight instructor. In 1956, he became a flight commander for a squadron in West Germany.
In 1959, Aldrin became interested in the developing U.S. space program. He enrolled in an engineering program at the Massachusetts Institute of Technology and graduated in 1963 with a Doctor of Science degree in Orbital Mechanics; his thesis dealt with the piloting and rendezvous of two spacecraft in orbit.
Aldrin was selected to be in NASA's third group of astronauts in October of 1963. Aldrin was the first astronaut to hold a doctoral degree and the only astronaut who was not a test pilot. < Professionalism
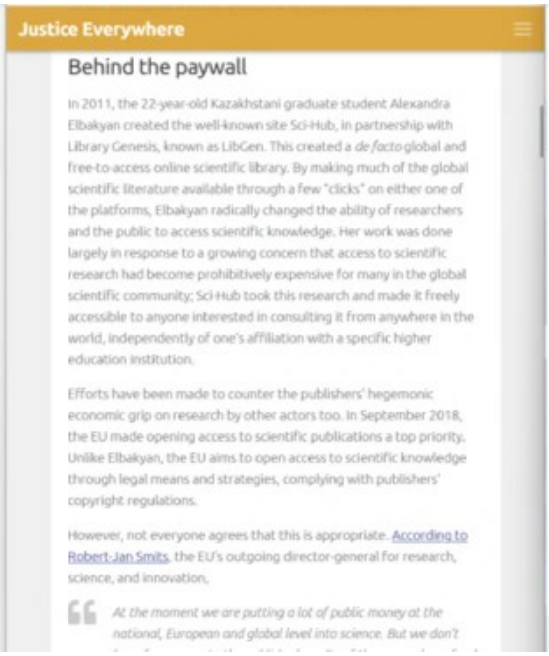
Sci-Hub is a website established by Alexandra Elbakyan in 2011 that allows users to have free open access to scholarly articles. Elbakyan described the site as "The first pirate website in the world to provide mass and public access to tens of millions of research papers."[1] The website provides access to 85.2% of paywalled articles through the use of institutional networks to gain subscription access to publications.[1] Sci-Hub has been found to provide access to more articles than alternative access websites, including PubMed, ResearchGate, and Google Scholar.[2] While a portion of the institutional credentials is donated to Sci-Hub, others are potentially obtained through hacking or phishing.[3][4] While Sci-Hub has received support in some academic circles for its open access to articles and its opposition to the status quo in publishing, it has also received criticism for its illegality and alleged lack of academic integrity.



Justice Everywhere
Behind the paywall
In 2011, the 22-year-old Kazakhstani graduate student Alexandra Elbakyan created the well-known site Sci-Hub, in partnership with Library Genesis, known as LibGen. This created a de facto global and free-to-access online scientific library. By making much of the global scientific literature available through a few "clicks" on either one of the platforms, Elbakyan radically changed the ability of researchers and the public to access scientific knowledge. Her work was done largely in response to a growing concern that access to scientific research had become prohibitively expensive for many in the global scientific community; Sci-Hub took this research and made it freely accessible to anyone interested in consulting it from anywhere in the world, independently of one's affiliation with a specific higher education institution.
Efforts have been made to counter the publishers' hegemonic economic grip on research by other actors too. In September 2018, the EU made opening access to scientific publications a top priority. Unlike Elbakyan, the EU aims to open access to scientific knowledge through legal means and strategies, complying with publishers' copyright regulations.
However, not everyone agrees that this is appropriate. According to Robert-Jan Smits, the EU's outgoing director-general for research, science, and innovation,
At the moment we are putting a lot of public money at the national, European and global level into science. But we don't

BIG THINK
Meet the Robin Hood of Science, Alexandra Elbakyan
How one researcher created a pirate bay for science more powerful than even libraries at top universities.

Deadly Narcosatanist Cult Performed Human Sacrifices For Drug Cartels
Adolfo Constanzo led the Narco-Satanist Palo Mayombe cult in the gruesome torture and murder of college student Mark James Kilroy.
By Benjamin H. Smith | Apr 22, 2020, 3:42 PM ET
They were dubbed "Los Narcosatánicos" by Mexican newspaper El Universal, which, translated into English, means The Narco-Satanists. Others referred to them as "The Matamoros Cult," for the border town where their compound was located, or simply "Palo Mayombe," the name of the Afro-Cuban religion they warped to their own bloody ends.
Shepherded by charismatic cult leader Adolfo Constanzo and his "witch," Sara Aldrete, they are responsible for 15 murders, maybe more. Their victims were tortured then ritualistically slain. Human sacrifices, they believed, bestowed supernatural powers upon them and their associates

BELIEFS AS A CRIMINOGENIC FACTOR
Thursday, April 28, 2016
The "Narco-Satanist" Serafín Hernández speaks out 25 years after the Matamoros case.
Serafín Hernández García was about to turn 21 in 1989 when he was arrested, he says, at the home of his uncle Elio Hernández Rivera, although the police version contradicts this since they were detained when they passed a checkpoint near the Santa Elena ranch, which was the temple of sacrifices of the gang known as the Narcosatánicos.
It was the year 1999, ten years had passed since the events at the Santa Elena ranch in Matamoros, Tamaulipas, where the bodies of 15 people were found murdered and dismembered in satanic rites and two involved sentenced to 67 years in prison in the first instance, Serafín Hernández García and Sergio Martínez Salinas, agreed to be interviewed by Hora Cero at the Social Readaptation Center (Cereso) in Ciudad Victoria where they were transferred in 1993.
On April 9, 1989, agents of the State Judicial Police and the Federal Judicial Police, with the support of Mexican preventive agents and investigators from the United States, arrested four people (later more were involved), including those interviewed, for the kidnapping of 21-year-old American citizen Mark Kilroy. However, the investigation led to a gang of people who performed satanic rites, killing and dismembering their victims.
The leaders were Cuban Adolfo de Jesús Constanzo, based in Miami, Florida, and Sara Aldrete Villarreal, originally from Matamoros, currently in prison, known as "The

Also spelled: Naburianos, Naburiannuos, Naburiannu, or Naburimannu

Flourished: *c.* 491 BC,, Babylonia

Flourished: c.491 BCE - • Babylonia

See all related content

Nabu-rimanni (flourished *c.* 491 BC, Babylonia) was the earliest Babylonian astronomer known by name, who devised the so-called System A, a group of ephemerides, or tables, giving the positions of the Moon, Sun, and planets at any given moment. Based on centuries of observation, these tables were nonetheless somewhat crude and were superseded about a century later by Kidinnu's System B, a refined mathematical method for finding celestial positions more accurately. Both systems were in use simultaneously between 250 and 50 BC. Nabu-rimanni also calculated the length of the synodic month (from New Moon to New Moon) to be 29.530614 days, as compared with the modern value of 29.530596 days.

From Wikipedia, the free encyclopedia

Aristarchus of Samos (/ˌærəˈstɑːrkəs/; Ancient Greek: Ἀρίσταρχος ὁ Σάμιος, *Aristarkhos ho Samios*; c. 310 – c. 230 BC) was an ancient Greek astronomer and mathematician who presented the first known heliocentric model that placed the Sun at the center of the universe, with the Earth revolving around the Sun once a year and rotating about its axis once a day. He also supported the theory of Anaxagoras according to which the Sun was just another star.[2]

He likely moved to Alexandria, and he was a student of Strato of Lampsacus, who later became the third head of the Peripatetic School

Cannibalism in the Americas

3 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Cannibalism in the Americas has been practiced in many places throughout much of the history of North America and South America. The modern term "cannibal" is derived from the name of the Island Caribs (Kalinago), who were encountered by Christopher Columbus in The Bahamas. While numerous cultures in the Americas were reported by European explorers and colonizers to have engaged in cannibalism, some of these claims may be unreliable since the Spanish Empire used them to justify conquest.[1]

The Wari people and funerary cannibalism

The Wari people of the Amazon, Brazil, are known for practicing compassionate funerary cannibalism as recently as the 1960's. It was their cultural norm for the in-laws of the deceased to consume the body at the funeral. Why did they do this? It was not to do with taking on the essence, knowledge or power of the dead. Nor was it nutritional. Nor was it aggressive. Instead it is to do with radically different way that the Wari see the body and a person's identity.

WISH CNY
Dear friends of WISH CNY,
You may have noticed the past few weeks that we have been featuring both men and women in our posts. This is because we have changed our membership (and our name) to be non-gendered! We are now "We of Italian and Syracuse and Heritage CNY"
The founding members began this group with the immediate goals of replacing the statue of Christopher Columbus (Cristoforo Colombo) in the city center of Syracuse NY, challenging oppressive patriarchal representations of Italian and Italian-American histories, and supporting healing changes to statue culture in the US. We are embracing the universal need for solidarity.
We are accepting new members regardless of gender orientation- and you don't have to be of Italian ancestry either, but you should have a strong connection to Syracuse, NY and care about Italian culture and history.
Join us for as we continue:
• Engaging in community dialogue and leadership to remove and replace the Columbus

MARTIN ALONSO Spanish navigator and companion of Columbus on his first voyage to the New World, b. at Palos de Moguer, 1441; d. there at the convent of La Rabida, 1493. Sprung from a family of seamen, he became a hardy sailor and skillful pilot. According to Parkman and other historians, he sailed under Cousin, a navigator from Dieppe, to the eastern coast of Africa, whence they were carried far to the southwest. They there discovered an unknown land and a mighty river. Pinzon's conduct on this voyage was so mutinous that Cousin entered a complaint to the admiralty on their return home, and had him dismissed from the maritime service of Dieppe. returning to Spain Pinzon became acquainted with Columbus through Fray Juan Perez de Marchina, prior of the convent of La Rabida, and became an enthusiastic promoter of the scheme of the great navigator. Other historians account differently for the origin of Pinzon's interest in Columbus's project. According to these, he heard

U.S. Attorney's Office, Western District of Missouri

JEFFERSON CITY, Mo. – A former corrections officer at the Jefferson City Correctional Center and his wife were sentenced in federal court today to charges related to video recording their sexual assault of a 4-year-old victim.

Paul Emerson Schofield, 35, and his wife, Sara Ellen Schofield, 31, both of Jefferson City, were sentenced in separate appearances before U.S. District Judge Brian C. Wimes. Paul Schofield was sentenced to 40 years in federal prison without parole. Sara Schofield was sentenced to 35 years in federal prison without parole. The court also sentenced the Schofields to spend the rest of their lives on supervised release following incarceration.

On Nov. 7, 2023, the Schofields each pleaded guilty to one count of conspiracy to produce child pornography

Scofield is charged with promoting an obscene sexual performance of a child less than 17, possession of an obscene sexual performance by a child less than 16 and possessing a sexual performance by a child less than 16. State police previously arrested her last October when they say an initial investigation allegedly found her in possession of child pornography.

The Ulster County District Attorney's Office says the couple were found with hundreds of images depicting child sex abuse. They say some of the images were shared to others by text and through social media platforms.

News 12 confirmed with state police that Child Protective Services has been notified in the case.

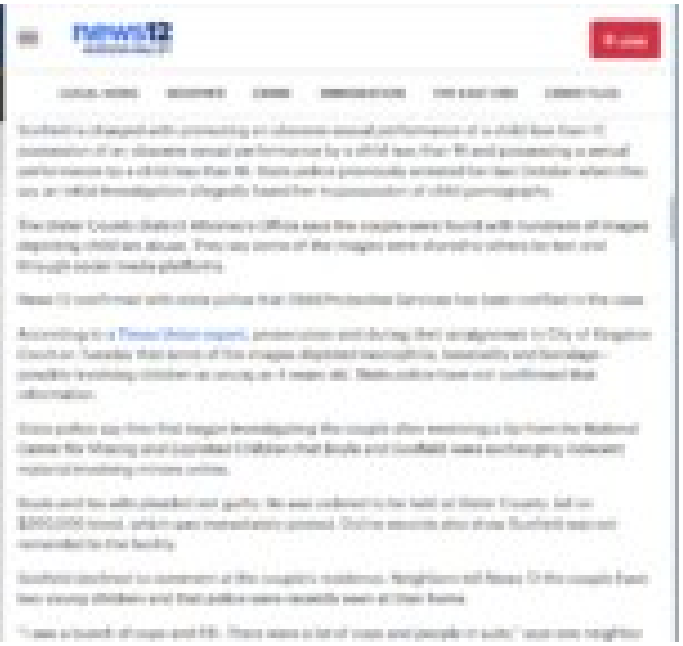
According to a Times Union report, prosecutors said during their arraignment in City of Kingston Court on Tuesday that some of the images depicted necrophilia, beastiality and bondage - possibly involving children as young as 4 years old. State police have not confirmed that information.

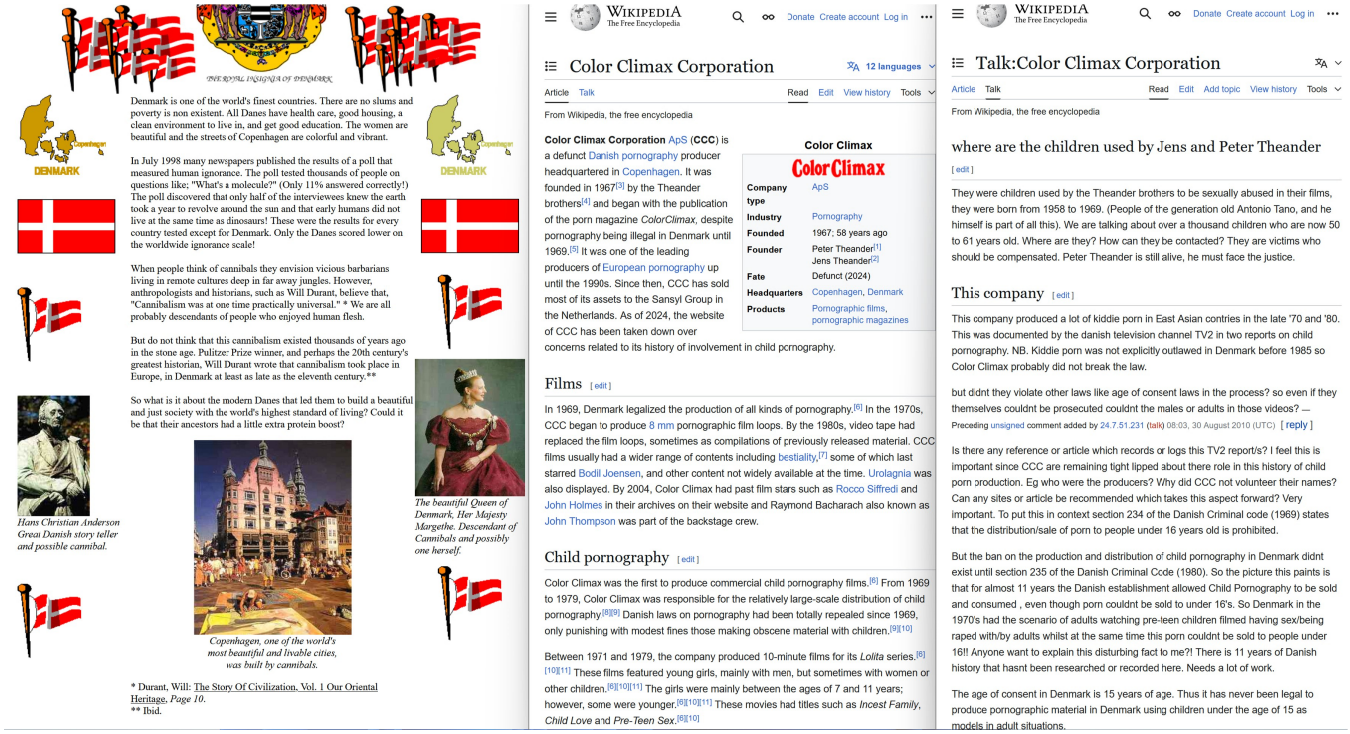
State police say they first began investigating the couple after receiving a tip from the National Center for Missing and Exploited Children that Boyle and Scofield were exchanging indecent material involving minors online.

Boyle and his wife pleaded not guilty. He was ordered to be held at Ulster County Jail on $200,000 bond, which was immediately posted. Online records also show Scofield was not remanded to the facility.

Scofield declined to comment at the couple's residence. Neighbors tell News 12 the couple have two young children and that police were recently seen at their home.

"I saw a bunch of cops and FBI. There were a lot of cops and people in suits," says one neighbor





THE ROYAL INSIGNIA OF DENMARK
DENMARK
DENMARK
Denmark is one of the world's finest countries. There are no slums and poverty is non existent. All Danes have health care, good housing, a clean environment to live in, and get good education. The women are beautiful and the streets of Copenhagen are colorful and vibrant.
In July 1998 many newspapers published the results of a poll that measured human ignorance. The poll tested thousands of people on questions like; "What's a molecule?" (Only 11% answered correctly!) The poll discovered that only half of the interviewees knew the earth took a year to revolve around the sun and that early humans did not live at the same time as dinosaurs! These were the results for every country tested except for Denmark. Only the Danes scored lower on the worldwide ignorance scale!
When people think of cannibals they envision vicious barbarians living in remote cultures deep in far away jungles. However, anthropologists and historians, such as Will Durant, believe that, "Cannibalism was at one time practically universal." * We are all probably descendants of people who enjoyed human flesh.
But do not think that this cannibalism existed thousands of years ago in the stone age. Pulitze: Prize winner, and perhaps the 20th century's greatest historian, Will Durant wrote that cannibalism took place in Europe, in Denmark at least as late as the eleventh century.**
So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?
Hans Christian Anderson
Grea Danish story teller and possible cannibal.
Copenhagen, one of the world's most beautiful and livable cities, was built by cannibals.
The beautiful Queen of Denmark, Her Majesty Margethe. Descendant of Cannibals and possibly one herself.

From Wikipedia, the free encyclopedia
Color Climax Corporation ApS (CCC) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967[3] by the Theander brothers[4] and began with the publication of the porn magazine ColorClimax, despite pornography being illegal in Denmark until 1969.[5] It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.
Color Climax
Color Climax
Company type ApS
Industry Pornography
Founded 1967; 58 years ago
Founder Peter Theander[1] Jens Theander[2]
Fate Defunct (2024)
Headquarters Copenhagen, Denmark
Products Pornographic films, pornographic magazines
Films [edit]
In 1969, Denmark legalized the production of all kinds of pornography.[6] In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality,[7] some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.
Child pornography [edit]
Color Climax was the first to produce commercial child pornography films.[6] From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography.[8][9] Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.[8][10]
Between 1971 and 1979, the company produced 10-minute films for its Lolita series.[6][10][11] These films featured young girls, mainly with men, but sometimes with women or other children.[8][10][11] The girls were mainly between the ages of 7 and 11 years; however, some were younger.[8][10][11] These movies had titles such as Incest Family, Child Love and Pre-Teen Sex.[8][10]

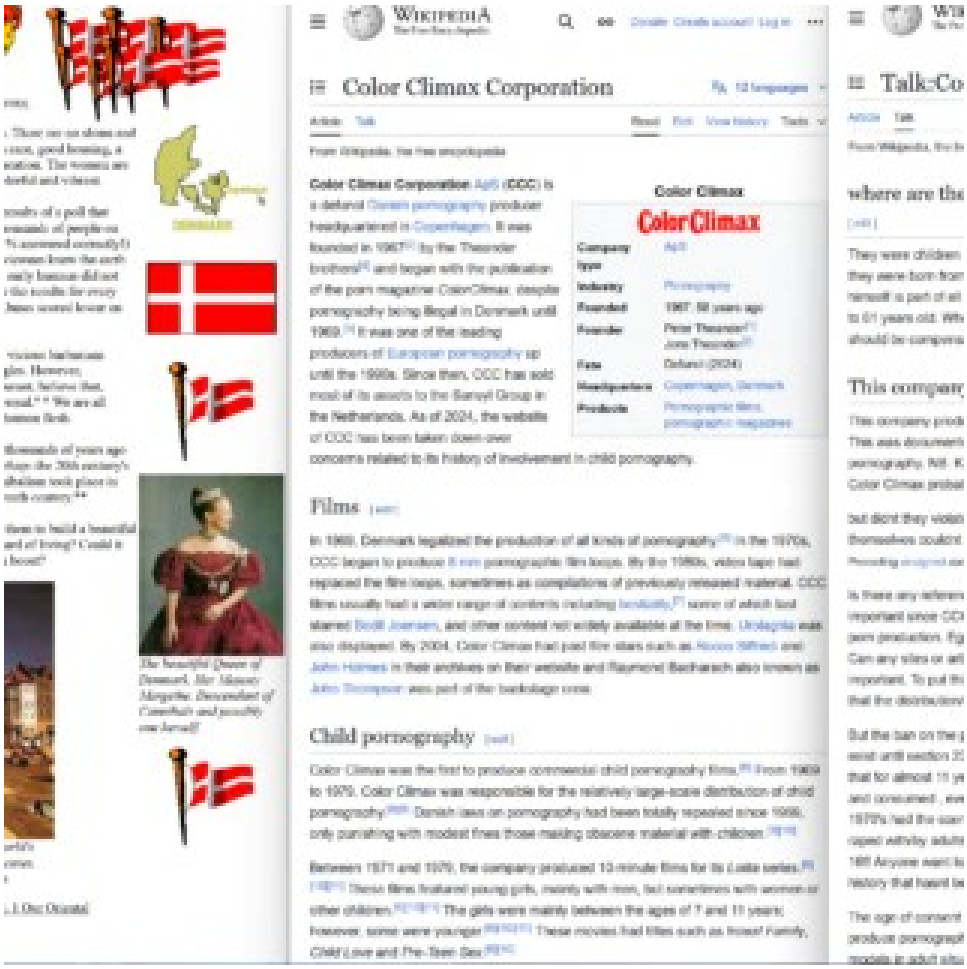
where are the children used by Jens and Peter Theander
[edit]
They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.
This company [edit]
This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.
but didnt they violate other laws like age of consent laws in the process? so even if they themselves couldnt be prosecuted couldnt the males or adults in those videos? — Preceding unsigned comment added by 24.7.51.231 (talk) 08:03, 30 August 2010 (UTC) [reply]
Is there any reference or article which records or logs this TV2 report/s? I feel this is important since CCC are remaining tight lipped about there role in this history of child porn production. Eg who were the producers? Why did CCC not volunteer their names? Can any sites or article be recommended which takes this aspect forward? Very important. To put this in context section 234 of the Danish Criminal code (1969) states that the distribution/sale of porn to people under 16 years old is prohibited.
But the ban on the production and distribution of child pornography in Denmark didnt exist until section 235 of the Danish Criminal Code (1980). So the picture this paints is that for almost 11 years the Danish establishment allowed Child Pornography to be sold and consumed , even though porn couldnt be sold to under 16's. So Denmark in the 1970's had the scenario of adults watching pre-teen children filmed having sex/being raped with/by adults whilst at the same time this porn couldnt be sold to people under 16!! Anyone want to explain this disturbing fact to me?! There is 11 years of Danish history that hasnt been researched or recorded here. Needs a lot of work.
The age of consent in Denmark is 15 years of age. Thus it has never been legal to produce pornographic material in Denmark using children under the age of 15 as models in adult situations.



Denmark is one of the world's finest countries. There are no slums and poverty is non existent. All Danes have health care, good housing, a clean environment to live in, and get good education. The women are beautiful and the streets of Copenhagen are colorful and vibrant.

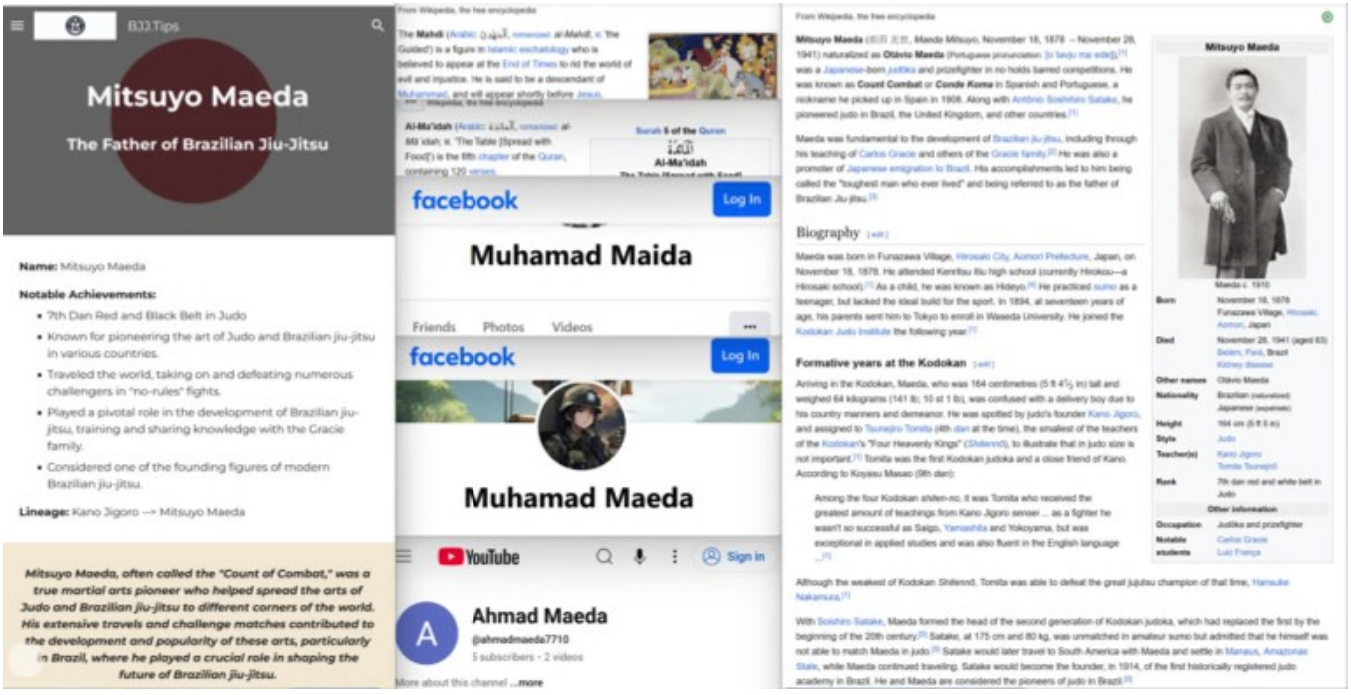
ENCYCLOPEDIA
Martin Alonso
Spanish navigator and companion of Columbus on his first voyage to the New World
Christoffa Corombo (c. 1451 – 1506), better known by the anglicized Christopher Columbus, was an Italian navigator, colonizer and explorer. Originally intending to find a western route to the Indian subcontinent, his voyages across the Atlantic Ocean widely exposed the existence of the Americas to the Europeans and paved the way for the founding of the Spanish Empire.



B33.Tips
Mitsuyo Maeda
The Father of Brazilian Jiu-Jitsu
Name: Mitsuyo Maeda
Notable Achievements:
7th Dan Red and Black Belt in Judo
Known for pioneering the art of Judo and Brazilian jiu-jitsu in various countries.
Traveled the world, taking on and defeating numerous challengers in "no-rules" fights.
Played a pivotal role in the development of Brazilian jiu-jitsu, training and sharing knowledge with the Gracie family.
Considered one of the founding figures of modern Brazilian jiu-jitsu.
Lineage: Kano Jigoro --> Mitsuyo Maeda
Mitsuyo Maeda, often called the "Count of Combat," was a true martial arts pioneer who helped spread the arts of Judo and Brazilian jiu-jitsu to different corners of the world. His extensive travels and challenge matches contributed to the development and popularity of these arts, particularly in Brazil, where he played a crucial role in shaping the future of Brazilian jiu-jitsu.
The Mahdi (Arabic: المهدي, romanized: al-Mahdī, lit. 'the Guided') is a figure in Islamic eschatology who is believed to appear at the End of Times to rid the world of evil and injustice. He is said to be a descendant of Muhammad, and will appear shortly before Jesus.
Al-Ma'idah (Arabic: المائدة, romanized: al-Māʾidah, lit. 'The Table [Spread with Food]') is the fifth chapter of the Quran, containing 120 verses.
Surah 5 of the Quran

Mitsuyo Maeda (前田 光世, Maeda Mitsuyo, November 18, 1878 – November 28, 1941) naturalized as Otávio Maeda (Portuguese pronunciation: [o tavju mai ɛdɐ]),[1] was a Japanese-born judoka and prizefighter in no holds barred competitions. He was known as Count Combat or Conde Koma in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshitaro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]
Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-Jitsu.[3]
Biography
Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itsu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]
Formative years at the Kodokan
Arriving in the Kodokan, Maeda, who was 164 centimetres (5 ft 4½ in) tall and weighed 64 kilograms (141 lb; 10 st 1 lb), was confused with a delivery boy due to his country manners and demeanor. He was spotted by judo's founder Kano Jigoro, and assigned to Tsunejiro Tomita (4th dan at the time), the smallest of the teachers of the Kodokan's "Four Heavenly Kings" (Shitennō), to illustrate that in judo size is not important.[1] Tomita was the first Kodokan judoka and a close friend of Kano. According to Koyasu Masao (9th dan):
Among the four Kodokan shiten-no, it was Tomita who received the greatest amount of teachings from Kano Jigoro sensei ... as a fighter he wasn't so successful as Saigo, Yamashita and Yokoyama, but was exceptional in applied studies and was also fluent in the English language ...[1]
Although the weakest of Kodokan Shitennō, Tomita was able to defeat the great jujutsu champion of that time, Hansuke Nakamura.[1]
With Soshitaro Satake, Maeda formed the head of the second generation of Kodokan judoka, which had replaced the first by the beginning of the 20th century.[5] Satake, at 175 cm and 80 kg, was unmatched in amateur sumo but admitted that he himself was not able to match Maeda in judo.[5] Satake would later travel to South America with Maeda and settle in Manaus, Amazonas State, while Maeda continued traveling. Satake would become the founder, in 1914, of the first historically registered judo academy in Brazil. He and Maeda are considered the pioneers of judo in Brazil.[5]
Mitsuyo Maeda
Maeda c. 1910
Born November 18, 1878 Funazawa Village, Hirosaki, Aomori, Japan
Died November 28, 1941 (aged 63) Belém, Pará, Brazil
Kidney disease
Other names Otávio Maeda
Nationality Brazilian (naturalized) Japanese (expatriate)
Height 164 cm (5 ft 5 in)
Style Judo
Teacher(s) Kano Jigoro, Tomita Tsunejirō
Rank 7th dan red and white belt in Judo
Other information
Occupation Judoka and prizefighter
Notable students Carlos Gracie, Luiz França

Mitsuyo Maeda

Conde Koma

Grande mestre Mitsuyo Maeda (1878-1941) aprendeu Jiu-Jitsu no Japão, ganhou o apelido de Conde Koma na Espanha, venceu centenas de lutas em Cuba e disseminou seus conhecimentos no Brasil, para alunos promissores como o jovem Carlos Gracie, em Belém do Pará.

Nascido na pequena Aomori, Maeda era conhecido como "Menino Sumô", graças ao seu fascínio pela modalidade ensinada pelo pai. Anos depois, foi estudar em Tóquio, conheceu o Jiu-Jitsu original, treinou com Jigoro Kano e se apaixonou pela arte suave.

Segundo pesquisadores, Mitsuyo Maeda recebeu a faixa-preta aos 20 anos, no dia 25 de dezembro de 1898, na célebre escola Kodokan. Para ser graduado, Maeda precisou vencer 15 oponentes no mesmo dia.

Margrethe P. Rask (1930 – 12 December 1977), better known as Grethe Rask, was a Danish physician and surgeon in Zaire, now the Democratic Republic of the Congo. After setting up her own hospital in the village of Abumombazi in 1972,[2] she transferred to Danish Red Cross Hospital in Kinshasa in 1975. She returned to Denmark in 1977 after developing symptoms of an unknown infectious disease, which was later discovered to be AIDS. In June 1981, the Centers for Disease Control recognized AIDS. Rask was one of the first non-Africans, along with Arvid Noe and Robert Rayford, and first woman known to have died of AIDS-related causes.[3]
Margrethe P. Rask
Born 1930 Thisted, Denmark
Died 12 December 1977 (aged 46–47) Copenhagen, Denmark[1]
Cause of death AIDS-related complications
Years active 1964–1977
Known for One of the first non-Africans to die of HIV/AIDS

Aylar Lie
Aylar Dianati Lie (Persian: آیلار دیاتی لی; born 12 February 1984)[1] is an Iranian-Norwegian actress, model, singer and former pornographic actress. She has worked as a music video actress and singer, appearing in several of Swedish musician Basshunter's music videos. She became famous after participating in the Norwegian Big Brother.
Early life [edit]
Aylar Dianati Lie was born in 1984 in Tehran.She moved to Norway when she was 3 years old. After arriving in Norway, her parents separated and Aylar was placed in the custody of the Child Protective Services. After a few years she was taken into the foster care system. Aylar had moved eighteen times before she began elementary school, and until finally she found foster parents. Her biological mother moved to the United States, while her father remained in constant struggle with the Norwegian authorities.[2]

Tim Berners-Lee
Sir Timothy John Berners-Lee (born 8 June 1955), also known as TimBL, is an English computer scientist best known as the inventor of the World Wide Web, the HTML markup language, the URL system, and HTTP. He is a professorial research fellow at the University of Oxford and a professor emeritus at the Massachusetts Institute of Technology (MIT).
Berners-Lee proposed an information management system on 12 March 1989 and implemented the first successful communication between a Hypertext Transfer Protocol (HTTP) client and server via the Internet in mid-November. He devised and implemented the first Web browser and Web server and helped foster the Web's subsequent explosive development. He is the founder and emeritus director of the World Wide Web Consortium (W3C), which oversees the continued development of the Web. He co-founded (with Rosemary Leith) the World Wide Web Foundation. In April 2009, he was elected as Foreign Associate of the National Academy of Sciences.
Berners-Lee was previously a senior researcher and holder of the 3Com founder's chair at the MIT Computer Science and Artificial Intelligence Laboratory (CSAIL). He is a director of the Web Science Research Initiative

WiLAN is a technology development and intellectual property licensing company with headquarters in Ottawa, Ontario, Canada.[1] In addition to collaborating with other patent portfolio owners, WiLan licenses its own portfolio of patents. Modern wireless communication methods are continuously researched and developed by WiLAN Labs. A publicly traded company on the Toronto Stock Exchange, Quarterhill Inc.'s principal subsidiary is WiLAN..

Wi-LAN Inc.

Company type	Subsidiary
Industry	Patent monetization
Founded	1992
Founder	Hatim Zaghloul Michel Fattouche
Headquarters	Ottawa, Ontario, Canada
Area served	Worldwide
Key people	Michael B. Vladescu, President and CEO
Products	Bluetooth, LTE, WiMAX, WiFi, CDMA, DOCSIS
Parent	Quarterhill Inc.
Website	wilan.com

History

In 1992, Hatim Zaghloul and Michel Fattouche co-founded WiLAN[2] after they developed together the Wideband Orthogonal Frequency Division Multiplexing (WOFDM),[3][non-primary source needed] and Multi-code Direct-sequence Spread Spectrum (MCDSSS).[4][non-primary source needed] Through WiLAN's efforts, the Federal Communications Commission (FCC) has allowed OFDM technology over the 2.4 GHz unlicensed ISM band for the Institute of Electrical and Electronics Engineers (IEEE) 802.11 standards. MC-DSSS (MultiCode-Direct-sequence Spread Spectrum) is central to high speed CDMA applications, the main technology currently used by many cellphone networks.

In March 1998, WiLAN had its initial public offering.[5]

In November 1999, WiLAN and Philips invited companies to attend a meeting to form an alliance to promote the OFDM technology and its applications.[6] WiLAN was a founding member of the WiMAX Forum together with Ensemble, CossSpan, Harris, and Nokia.

From its founding in 1992 to 2000, WiLAN had success as interest and investment in the tech industry grew. However, in 2000, when the world's first tech bubble collapsed,

Hatim Zaghloul is the inventor of the well-known daily-used Wi-FI's WiMAX's and LTE's WOFDM! He is renowned in the field and known among global companies in the field of telecommunications and technology. Hatim decided that he couldn't be stingy with the amount of information he has; so, he contributed to developing the Internet service to increase its speed and using it on mobile phones. In 1989, he joined a Canadian telecom company after he emigrated from Egypt in 1983. There, he established his invention in cooperation with his companion Dr. Micheal Fattoush. What a miraculous career he has.

According to Dr. Peter Gendelman and Muhammad Hatar, directors of the excavation for the Israel Antiquities Authority, the treasure was probably hidden during one of the more dramatic occurrences in Caesarea's long history – the conquest of Caesarea by the crusaders in the year 1101. Therefore, the coins are estimated to be about 900 years old. It is probable that their owners were killed or sold as slaves and never returned to claim their goods.

Color Climax Corporation ApS (CCC) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967 by the Theander brothers and began with the publication of the porn magazine ColorClimax, despite pornography being illegal in Denmark until 1969. It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.

Founded 1967; 58 years ago
Founder Peter Theander Jens Theander
Fate Defunct (2024)
Headquarters Copenhagen, Denmark
Products Pornographic films, pornographic magazines
Films
In 1969, Denmark legalized the production of all kinds of pornography. In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality, some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.
Child pornography
Color Climax was the first to produce commercial child pornography films. From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography. Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.
Between 1971 and 1979, the company produced 10-minute films for its Lolita series. These films featured young girls, mainly with men, but sometimes with women or other children. The girls were mainly between the ages of 7 and 11 years; however, some were younger. These movies had titles such as Incest Family, Child Love and Pre-Teen Sex.

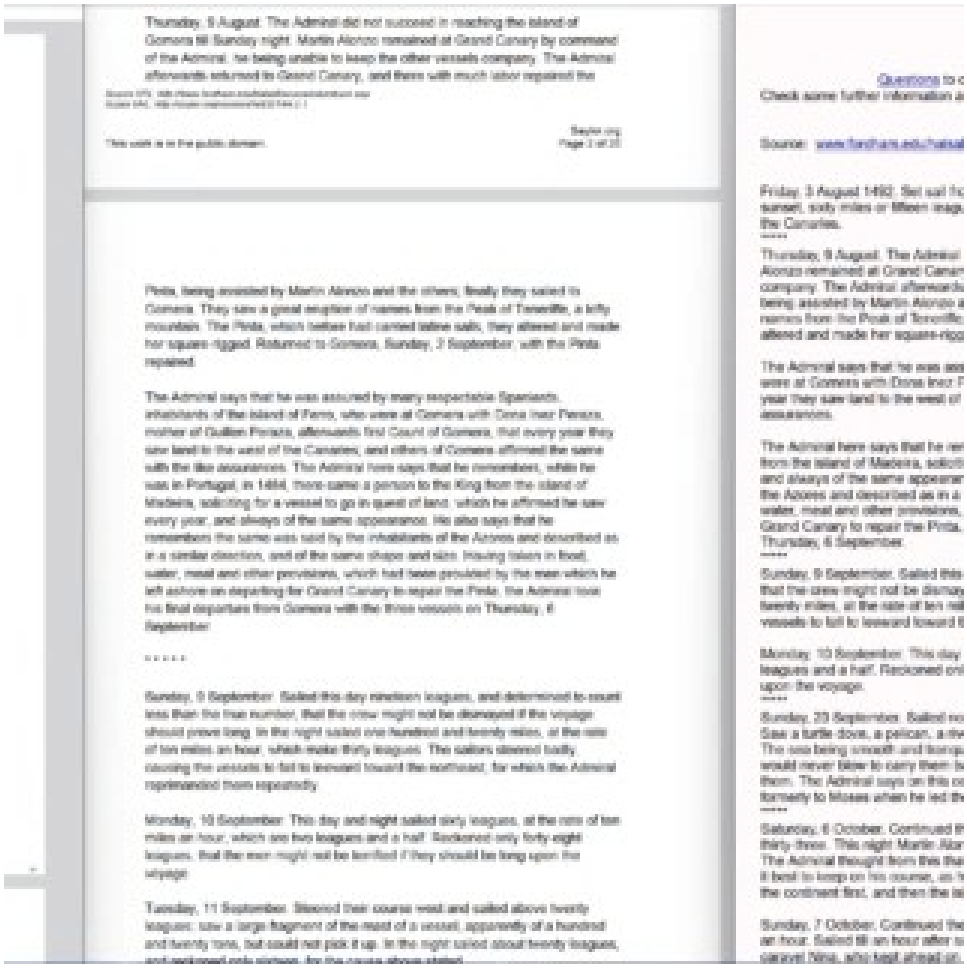
The global porn superpower with headquarters on Luxembourg's Boulevard Royal has changed its name from MindGeek to Aylo, hoping for a fresh start after its sale earlier this year and ongoing legal claims in the US that it profited from child pornography.



Thursday, 5 August. The Admiral did not succeed in reaching the island of Gomera till Sunday night. Martin Alonzo remained at Grand Canary by command of the Admiral, he being unable to keep the other vessels company. The Admiral afterwards returned to Grand Canary, and there with much labor repaired the

Pinta, being assisted by Martin Alonzo and the others; finally they sailed to Gomera. They saw a great eruption of names from the Peak of Teneriffe, a lofty mountain. The Pinta, which hitherto had carried latine sails, they altered and made her square-rigged. Returned to Gomera, Sunday, 2 September, with the Pinta repaired.

The Admiral says that he was assured by many respectable Spaniards, inhabitants of the island of Ferro, who were at Gomera with Doña Inez Peraza, mother of Guillen Peraza, afterwards first Count of Gomera, that every year they saw land to the west of the Canaries, and others of Gomera affirmed the same with the like assurances. The Admiral here says that he remembers, while he was in Portugal, in 1484, more same a person to the King from the island of Madeira, soliciting for a vessel to go in quest of land, which he affirmed he saw every year, and always of the same appearance. He also says that he remembers the same was said by the inhabitants of the Azores and described as in a similar direction, and of the same shape and size. Having taken in food, water, meat and other provisions, which had been provided by the men which he left ashore on departing for Grand Canary to repair the Pinta, the Admiral took his final departure from Gomera with the three vessels on Thursday, 6 September.

Sunday, 9 September. Sailed this day nineteen leagues, and determined to count less than the true number, that the crew might not be dismayed if the voyage should prove long. In the night sailed one hundred and twenty miles, at the rate of ten miles an hour, which make thirty leagues. The sailors steered badly, causing the vessels to fall to leeward toward the northeast, for which the Admiral reprimanded them repeatedly.

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.

Tuesday, 11 September. Steered their course west and sailed above twenty leagues; saw a large fragment of the mast of a vessel, apparently of a hundred and twenty tons, but could not pick it up. In the night sailed about twenty leagues,

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.

* * * * *

Sunday, 23 September. Sailed northwest and northwest by north and at times west nearly twenty-two leagues. Saw a turtle dove, a pelican, a river bird, and other white fowl;--weeds in abundance with crabs among them. The sea being smooth and tranquil, the sailors murmured, saying that they had got into smooth water, where it would never blow to carry them back to Spain; but afterwards the sea rose without wind, which astonished them. The Admiral says on this occasion "the rising of the sea was very favorable to me, as it happened formerly to Moses when he led the Jews from Egypt."

* * * * *

Saturday, 6 October. Continued their course west and sailed forty leagues day and night; reckoned to the crew thirty-three. This night Martin Alonzo gave it as his opinion that they had better steer from west to southwest. The Admiral thought from this that Martin Alonzo did not wish to proceed onward to Cipango; but he considered it best to keep on his course, as he should probably reach the land sooner in that direction, preferring to visit the continent first, and then the islands.

Sunday, 7 October. Continued their course west and sailed twelve miles an hour, for two hours, then eight miles an hour. Sailed till an hour after sunrise, twenty-three leagues; reckoned to the crew eighteen. At sunrise the caravel Nina, who kept ahead on account of her swiftness in sailing, while all the vessels were striving to outsail

They saw a great eruption of names from the Peak of Teneriffe, a lofty mountain. The Pinta, which before had carried latine sails, they altered and made her square-rigged. Returned to Gomera, Sunday, 2 September, with the Pinta repaired.

The Admiral says that he was assured by many respectable Spaniards, inhabitants of the island of Ferro, who were at Gomera with Dona Inez Peraza, mother of Guillen Peraza, afterwards first Count of Gomera, that every year they saw land to the west of the Canaries; and others of Gomera affirmed the same with the like assurances.

The Admiral here says that he remembers, while he was in Portugal, in 1484, there came a person to the King from the island of Madeira, soliciting for a vessel to go in quest of land, which he affirmed he saw every year, and always of the same appearance. He also says that he remembers the same was said by the inhabitants of the Azores and described as in a similar direction, and of the same shape and size. Having taken in food, water, meat and other provisions, which had been provided by the men which he left ashore on departing for Grand Canary to repair the Pinta, the Admiral took his final departure from Gomera with the three vessels on Thursday, 6 September.
*****

Sunday, 9 September. Sailed this day nineteen leagues, and determined to count less than the true number, that the crew might not be dismayed if the voyage should prove long. In the night sailed one hundred and twenty miles, at the rate of ten miles an hour, which make thirty leagues. The sailors steered badly, causing the vessels to fall to leeward toward the northeast, for which the Admiral reprimanded them repeatedly.

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.
*****

Sunday, 23 September. Sailed northwest and northwest by north and at times west nearly twenty-two leagues. Saw a turtle dove, a pelican, a river bird, and other white fowl;--weeds in abundance with crabs among them. The sea being smooth and tranquil, the sailors murmured, saying that they had got into smooth water, where it would never blow to carry them back to Spain; but afterwards the sea rose without wind, which astonished them. The Admiral says on this occasion "the rising of the sea was very favorable to me, as it happened formerly to Moses when he led the Jews from Egypt."
*****

Saturday, 6 October. Continued their course west and sailed forty leagues day and night; reckoned to the crew thirty-three. This night Martin Alonzo gave it as his opinion that they had better steer from west to southwest. The Admiral thought from this that Martin Alonzo did not wish to proceed onward to Cipango; but he considered it best to keep on his course, as he should probably reach the land sooner in that direction, preferring to visit the continent first, and then the islands.

Sunday, 7 October. Continued their course west and sailed twelve miles an hour, for two hours, then eight miles an hour. Sailed till an hour after sunrise, twenty-three leagues; reckoned to the crew eighteen. At sunrise the caravel Nina, who kept ahead on account of her swiftness in sailing, while all the vessels were striving to outsail

Mira Murati: The Albanian Woman Who Developed ChatGPT
Everyone is talking about ChatGPT, developed by OpenAI. This is such a great tool that has helped to make AI more accessible to a wider audience and has opened up new possibilities for the use of AI in communication. As a result, it has captured the attention and imagination of people from various fields and industries who are excited about the potential of AI to revolutionize the way we live and work.
But who is the brain behind the development of ChatGPT?
Mira Murati is a name that is gaining recognition in the

The Mother of Radiation: Marie Curie
Wed, Nov 7, 2018, 7:57AM ANS Nuclear Cafe Kaitlyn Butler
The start of Marie Curie's story isn't like most of the other scientists that had made a name for themselves throughout history, mostly because she was a grown woman by the start of the 20th century. But she was the first woman to do a lot of things, including getting a Ph.D. from a university in France, and winning a Nobel Prize. She was also the first person ever to win a Nobel Prize in two different fields of science. To say she pushed the societal and scientific boundaries of her era is an understatement.
Rachel Corrie

From Wikipedia, the free encyclopedia
Rachel Aliene Corrie (April 10, 1979 – March 16, 2003) was an American nonviolence activist and diarist.
She was a member of the pro-Palestinian International Solidarity Movement (ISM) and was active throughout the Israeli-occupied Palestinian territories. In 2003, she was in Rafah, a city in the Gaza Strip, where the Israeli military was demolishing Palestinian houses at the height of the Second Intifada. While protesting the demolitions as they were being carried out, she was killed by an Israeli armored bulldozer that crushed her.
Corrie was born in Olympia, Washington, the United States in 1979. After graduating from Capital High School, she went on to attend Evergreen State College. She took

Aldrin, Buzz
Person
Dates
Existence: January 20, 1930-
Biographical Information
Edwin Eugene (Buzz) Aldrin, Jr. was born on January 20, 1930 in Montclair, New Jersey. He was nicknamed "Buzz" by his sister. His mother, Marion Moon, was the daughter of an army chaplain. His father, Air Force Colonel Edwin Eugene Aldrin, Sr., was a former student of rocket scientist Robert Goddard, and an aviation pioneer in his own right.
Aldrin graduated from the United States Military Academy at West Point in 1951, ranking third in his graduating class. After graduation, Aldrin was as an officer in the Air Force. A year later he was sent to Korea as a fighter pilot. He completed 66 fighter missions during the Korean War, and was awarded the Distinguished Flying Cross. He then served as an Air Force instructor in Nevada before being assigned to the Air Force Academy as an aide and later a flight instructor. In 1956, he became a flight commander for a squadron in West Germany.
In 1959, Aldrin became interested in the developing U.S. space program. He enrolled in an engineering program at the Massachusetts Institute of Technology and graduated in 1963 with a Doctor of Science degree in Orbital Mechanics; his thesis dealt with the piloting and rendezvous of two spacecraft in orbit.
Aldrin was selected to be in NASA's third group of astronauts in October of 1963. Aldrin was the first astronaut to hold a doctoral degree and the only astronaut who was not a test pilot. Aldrin's first space mission was Gemini 12, which was with Jim Lovell, Jr. in November of 1966. During this flight, Aldrin established a new record for extra vehicular activity.
Following completion of the Gemini missions, the race was on between the United States and Russia to see who would reach the moon first. Aldrin completed many more hours of training to prepare for his role in different Apollo spaceflights. In 1969, Neil Armstrong, Michael Collins and Aldrin were chosen as the Apollo 11 crew. The United States was ready to launch a lunar landing flight. On July 20th, 1969, at 4:17 p.m., the Eagle landed on the Moon.
Aldrin resigned from NASA in 1971. Shortly afterwards he retired from the Air Force.

"Shoot for the moon 'you might get there!"
Edwin Eugene "Buzz" Aldrin Jr. was born in 1930 in Montclair, New Jersey, the youngest of three children and the only boy. His father, an aviation pioneer in the U.S. Army Air Corps, entered the reserves in the late 1920s and became an aviation fuel expert for Standard Oil Company. His father's skills as a World War II pilot led young Aldrin to dream of becoming a pilot.
Buzz Aldrin- 2005 Horatio Alger Award
During Aldrin's childhood, his father was called back into wartime service. His father's visits home were always short, and Aldrin felt that although his father was interested in him, his father was often emotionally remote. Aldrin's mother suffered from periodic depression and a dependency on alcohol. In the often-closed society that was suburban postwar America, people rarely discussed such afflictions openly. Aldrin's early adulthood became marked and scarred by his mother's withdrawal and her inability to provide emotional support. Aldrin inherited his mother's shyness, but he had an inquisitive nature. His ability to focus his attention on a problem until he found a solution developed his creativity

Professionalism/ Alexandra Elbakyan and Sci-Hub

Add languages

Book Discussion Tools

< Professionalism

Sci-Hub is a website established by Alexandra Elbakyan in 2011 that allows users to have free open access to scholarly articles. Elbakyan described the site as "The first pirate website in the world to provide mass and public access to tens of millions of research papers."[1] The website provides access to 85.2% of paywalled articles through the use of institutional networks to gain subscription access to publications.[1] Sci-Hub has been found to provide access to more articles than alternative access websites, including PubMed, ResearchGate, and Google Scholar.[2] While a portion of the institutional credentials is donated to Sci-Hub, others are potentially obtained through hacking or phishing.[3][4] While Sci-Hub has received support in some academic circles for its open access to articles and its opposition to the status quo in publishing, it has also received criticism for its illegality and alleged lack of academic integrity.

Justice Everywhere

Behind the paywall

In 2011, the 22-year-old Kazakhstani graduate student Alexandra Elbakyan created the well-known site Sci-Hub, in partnership with Library Genesis, known as LibGen. This created a *de facto* global and free-to-access online scientific library. By making much of the global scientific literature available through a few "clicks" on either one of the platforms, Elbakyan radically changed the ability of researchers and the public to access scientific knowledge. Her work was done largely in response to a growing concern that access to scientific research had become prohibitively expensive for many in the global scientific community; Sci-Hub took this research and made it freely accessible to anyone interested in consulting it from anywhere in the world, independently of one's affiliation with a specific higher education institution.

Efforts have been made to counter the publishers' hegemonic economic grip on research by other actors too. In September 2018, the EU made opening access to scientific publications a top priority. Unlike Elbakyan, the EU aims to open access to scientific knowledge through legal means and strategies, complying with publishers' copyright regulations.

However, not everyone agrees that this is appropriate. According to Robert-Jan Smits, the EU's outgoing director-general for research, science, and innovation,

> *At the moment we are putting a lot of public money at the national, European and global level into science. But we don't*

Deadly Narcosatanist Cult Performed Human Sacrifices For Drug Cartels

Adolfo Constanzo led the Narco-Satanist Palo Mayombe cult in the gruesome torture and murder of college student Mark James Kilroy.

By Benjamin H. Smith | Apr 22, 2020, 3:42 PM ET

They were dubbed "Los Narcosatánicos" by Mexican newspaper El Universal, which, translated into English, means The Narco-Satanists. Others referred to them as "The Matamoros Cult," for the border town where their compound was located, or simply "Palo Mayombe," the name of the Afro-Cuban religion they warped to their own bloody ends.

Shepherded by charismatic cult leader Adolfo Constanzo and his "witch," Sara Aldrete, they are responsible for 15 murders, maybe more. Their victims were tortured then ritualistically slain. Human sacrifices, they believed, bestowed supernatural powers upon them and their associates

The "Narco-Satanist" Serefín Hernández speaks out 25 years after the Matamoros case.

APR 11 1989

Serafín Hernández García was about to turn 21 in 1989 when he was arrested, he says, at the home of his uncle Elío Hernández Rivera, although the police version contradicts this since they were detained when they passed a checkpoint near the Santa Elena ranch, which was the temple of sacrifices of the gang known as the Narcosatánicos.

It was the year 1999, ten years had passed since the events at the Santa Elena ranch in Matamoros, Tamaulipas, where the bodies of 15 people were found murdered and dismembered in satanic rites and two involved sentenced to 67 years in prison in the first instance, Serafín Hernández García and Sergio Martínez Salinas, agreed to be interviewed by Hora Cero at the Social Readaptation Center (Cereso) in Ciudad Victoria where they were transferred in 1993.

On April 9, 1989, agents of the State Judicial Police and the Federal Judicial Police, with the support of Mexican preventive agents and investigators from the United States, arrested four people (later more were involved), including those interviewed, for the kidnapping of 21-year-old American citizen Mark Kilroy. However, the investigation led to a gang of people who performed satanic rites, killing and dismembering their victims.

The leaders were Cuban Adolfo de Jesús Constanzo, based in Miami, Florida, and Sara Aldrete Villarreal, originally from Matamoros, currently in prison, known as "The

(*b.* Vladimir, Russia. 10 August 1839; *d.* Moscow, Russia, 27 May 1896)

Stoletov came from a merchant family that had been exiled to Vladimir for sedition by Ivan the Terrible. His father, Grigory, owned a small grocery store and a tannery.

In 1856 Stoletov entered the Faculty of Physics and Mathematics at Moscow University as one of the first students from the merchant class to receive a government scholarship. His instructors in physics were M. F. Spassky and N. A. Lyubimov; and he received solid mathematical preparation under N. E. Zernov and N. D. Brashman. After graduating in 1860, he remained in the physics department to prepare for an academic career.

Nabu-rimanni (flourished *c.* 491 BC, Babylonia) was the earliest Babylonian astronomer known by name, who devised the so-called System A, a group of ephemerides, or tables, giving the positions of the Moon, Sun, and planets at any given moment. Based on centuries of observation, these tables were nonetheless somewhat crude and were superseded about a century later by Kidinnu's System B, a refined mathematical method for finding celestial positions more accurately. Both systems were in use simultaneously between 250 and 50 BC. Nabu-rimanni also calculated the length of the synodic month (from New Moon to New Moon) to be 29.530614 days, as compared with the modern value of 29.530596 days.

Cannibalism in the Americas

3 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Cannibalism in the Americas has been practiced in many places throughout much of the history of North America and South America. The modern term "cannibal" is derived from the name of the Island Caribs (Kalinago), who were encountered by Christopher Columbus in The Bahamas. While numerous cultures in the Americas were reported by European explorers and colonizers to have engaged in cannibalism, some of these claims may be unreliable since the Spanish Empire used them to justify conquest.[1]

A scene depicting ritualistic Aztec cannibalism being practiced in the Codex Magliabechiano, folio 73r.

At least some cultures have been physically and archeologically proven beyond any doubt whatsoever to have undertaken institutionalized cannibalism. This includes human bones uncovered

NOVEMBER 15, 2016

The Wari people and funerary cannibalism

The Wari people of the Amazon, Brazil, are known for practicing compassionate funerary cannibalism as recently as the 1960's. It was their cultural norm for the in-laws of the deceased to consume the body at the funeral. Why did they do this? It was not to do with taking on the essence, knowledge or power of the dead. Nor was it nutritional. Nor was it aggressive. Instead it is to do with radically different way that the Wari see the body and a person's identity.

Congo's Mai-Mai people are essentially community-based militias who are bound together in order to keep their homes from being taken over by a variety of armed groups.

Some are led by warlords, traditional tribal elders, or village heads, but they all take part in the ritual cannibalism of their enemies because they believe it brings them special powers.

Keep In Touch

Dear friends of WISH CNY,

You may have noticed the past few weeks that we have been featuring both men and women in our posts. This is because we have changed our membership (and our name) to be non-gendered! We are now "**We of Italian and Syracuse and Heritage CNY**."

The founding members began this group with the immediate goals of replacing the statue of Christopher Columbus (Cristoffa Corombo) in the city center of Syracuse NY, challenging oppressive patriarchal representations of Italian and Italian-American histories, and supporting healing changes to statue culture in the US. We are embracing the universal need for solidarity.

We are accepting new members regardless of gender orientation- and you don't have to be of Italian ancestry either, but you should have a strong connection to Syracuse, NY and care about Italian culture and history.

Join us for as we continue:

- Engaging in community dialogue and leadership to remove and replace the Columbus

MARTIN ALONSO Spanish navigator and companion of Columbus on his first voyage to the New World, b. at Palos de Moguer, 1441; d. there at the convent of La Rabida, 1493. Sprung from a family of seamen, he became a hardy sailor and skillful pilot. According to Parkman and other historians, he sailed under Cousin, a navigator from Dieppe, to the eastern coast of Africa, whence they were carried far to the southwest. They there discovered an unknown land and a mighty river. Pinzon's conduct on this voyage was so mutinous that Cousin entered a complaint to the admiralty on their return home, and had him dismissed from the maritime service of Dieppe. returning to Spain Pinzon became acquainted with Columbus through Fray Juan Perez de Marchina, prior of the convent of La Rabida, and became an enthusiastic promoter of the scheme of the great navigator. Other historians account differently for the origin of Pinzon's interest in Columbus's project. According to these, he heard

PRESS RELEASE

Former Jail Corrections Officer, Wife Sentenced for Producing Child Pornography

Monday, April 8, 2024

Share

For Immediate Release

U.S. Attorney's Office, Western District of Missouri

JEFFERSON CITY, Mo. – A former corrections officer at the Jefferson City Correctional Center and his wife were sentenced in federal court today to charges related to video recording their sexual assault of a 4-year-old victim.

Paul Emerson Schofield, 35, and his wife, Sara Ellen Schofield, 31, both of Jefferson City, were sentenced in separate appearances before U.S. District Judge Brian C. Wimes. Paul Schofield was sentenced to 40 years in federal prison without parole. Sara Schofield was sentenced to 35 years in federal prison without parole. The court also sentenced the Schofields to spend the rest of their lives on supervised release following incarceration.

On Nov. 7, 2023, the Schofields each pleaded guilty to one count of conspiracy to produce child pornography

Dr. Vinton Cerf and Dr. Robert Kahn
Medal of Freedom Recipients

Vinton Cerf and Robert Kahn designed the software code that is used to transmit data over the Internet. Dr. Cerf and Dr. Kahn have been at the forefront of a digital revolution that has transformed global commerce, communication, and entertainment.

Dr. Vinton G. Cerf
Vice President and Chief Internet Evangelist, Google

Vinton G. Cerf is vice president and Chief Internet Evangelist for Google. He is responsible for identifying new enabling technologies and applications on the Internet and other platforms for the company. Widely known as a "Father of the Internet," Vint is the co-designer with Robert Kahn of TCP/IP protocols and basic architecture of the Internet.

In 1997, President Clinton recognized their work with the U.S. National Medal of Technology. In 2005, Vint and Bob received the highest civilian honor bestowed in the U.S., the Presidential Medal of Freedom. It recognizes the fact that their work on the software code used to transmit data across the Internet has put them "at the forefront of a digital revolution that has transformed global commerce, communication, and entertainment."

From 1994-2005, Vint served as Senior Vice President at MCI. Prior to that, he was Vice President of the Corporation for National Research Initiatives (CNRI), and from 1982-86 he served as Vice President of MCI. During his tenure with the U.S. Department of Defense's Advanced Research Projects Agency (DARPA) from 1976-1982, Vint played a key role leading the development of Internet and Internet-related data packet and security technologies.

Private Mohammed Kahn: Civil War Soldier

June 23, 2017 By Matthew Schaefer, Posted In Catalog, Crowdsourcing, DC-Area Researchers, Digitization, Innovation Hub, Uncategorized

Today's post comes from Kate Mersiovsky, National Archives Technician

Since I've become an archives technician in the Innovation Hub Scanning Room at the National Archives, I've seen my fair share of interesting records. Researchers have digitized the pension of presidential widow Lucretia Garfield, the pension of Harriet Tubman, and the Supreme Court cases In Re Gault and U.S. v. Edith Windsor. Recently one of my fellow technicians, Jesse Wilinski, found another unique record- the pension file for Mohammed Kahn, a Muslim soldier who served in the Civil War.

It is rare to find records of Muslim Civil War soldiers in our holdings. So far, Jesse has only encountered two pensions, and historians know of only about 250 Muslim Civil War soldiers in all. This record, therefore, sheds light on a unique perspective that is often overlooked. As a

Emotion Recognition Technology
While Rana El Kaliouby was completing her doctoral research at the University of Cambridge in England in the early 2000s, she never felt as though she could ever truly connect with her loved ones back home. "Away from her family and friends in Egypt, El Kaliouby wished her computer could better convey her emotional state," Nasralla says. That's when she decided to find a way to make more emotionally intelligent technology.
After earning her doctorate, El Kaliouby took a position as a research scientist in the Affective Computing group in the MIT Media Lab. There, she was part of a team that developed an "emotional hearing aid," as well as a pair of eyeglasses that could read emotions, along with social cues. Officially known as "the Emotional-Social Intelligence Prosthesis," El Kaliouby and a colleague created the wearable technology in 2006 for people living with autism who have difficulty identifying and processing other people's emotions as they communicate.
In 2009, El Kaliouby and the same MIT colleague co-founded a company called Affectiva, which used deep learning, computer vision, speech science and vast amounts of real-world data to develop emotion recognition technology. "Her pioneering technology accurately reads minute changes in facial expressions that convey emotions," Nasralla says, adding that El Kaliouby is a member of the Women in Engineering Hall of Fame.

Mitsuyo Maeda
The Father of Brazilian Jiu-Jitsu
Name: Mitsuyo Maeda
Notable Achievements:
7th Dan Red and Black Belt in Judo
Known for pioneering the art of Judo and Brazilian jiu-jitsu in various countries.
Traveled the world, taking on and defeating numerous challengers in "no-rules" fights.
Played a pivotal role in the development of Brazilian jiu-jitsu, training and sharing knowledge with the Gracie family.
Considered one of the founding figures of modern Brazilian jiu-jitsu.
Lineage: Kano Jigoro --> Mitsuyo Maeda
Mitsuyo Maeda, often called the "Count of Combat," was a true martial arts pioneer who helped spread the arts of Judo and Brazilian jiu-jitsu to different corners of the world. His extensive travels and challenge matches contributed to the development and popularity of these arts, particularly in Brazil, where he played a crucial role in shaping the future of Brazilian jiu-jitsu.
From Wikipedia, the free encyclopedia
The Mahdi (Arabic: المهدي, romanized: al-Mahdī, lit. 'the Guided') is a figure in Islamic eschatology who is believed to appear at the End of Times to rid the world of evil and injustice. He is said to be a descendant of Muhammad, and will appear shortly before Jesus.
Al-Ma'idah (Arabic: المائدة, romanized: al-Mā'idah; lit. 'The Table [Spread with Food]') is the fifth chapter of the Quran, containing 120 verses.

From Wikipedia, the free encyclopedia
Mitsuyo Maeda (前田 光世, Maeda Mitsuyo, November 18, 1878 – November 28, 1941) naturalized as Otávio Maeda (Portuguese pronunciation: [o tavju ma'ede]),[1] was a Japanese-born judōka and prizefighter in no holds barred competitions. He was known as Count Combat or Conde Koma in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]
Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-Jitsu.[3]
Biography [edit]
Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]
Formative years at the Kodokan [edit]
Arriving in the Kodokan, Maeda, who was 164 centimetres (5 ft 4½ in) tall and weighed 64 kilograms (141 lb; 10 st 1 lb), was confused with a delivery boy due to his country manners and demeanor. He was spotted by judo's founder Kano Jigoro, and assigned to Tsunejiro Tomita (4th dan at the time), the smallest of the teachers of the Kodokan's "Four Heavenly Kings" (Shitennō), to illustrate that in judo size is not important.[1] Tomita was the first Kodokan judoka and a close friend of Kano. According to Koyasu Masao (9th dan):
Among the four Kodokan shiten-no, it was Tomita who received the greatest amount of teachings from Kano Jigoro sensei ... as a fighter he wasn't so successful as Saigo, Yamashita and Yokoyama, but was exceptional in applied studies and was also fluent in the English language ...[1]
Although the weakest of Kodokan Shitennō, Tomita was able to defeat the great jujutsu champion of that time, Hansuke Nakamura.[1]
With Soishiro Satake, Maeda formed the head of the second generation of Kodokan judoka, which had replaced the first by the beginning of the 20th century.[5] Satake, at 175 cm and 80 kg, was unmatched in amateur sumo but admitted that he himself was not able to match Maeda in judo.[5] Satake would later travel to South America with Maeda and settle in Manaus, Amazonas State, while Maeda continued traveling. Satake would become the founder, in 1914, of the first historically registered judo academy in Brazil. He and Maeda are considered the pioneers of judo in Brazil.[5]
Mitsuyo Maeda

Margrethe P. Rask (1930 – 12 December 1977), better known as Grethe Rask, was a Danish physician and surgeon in Zaire, now the Democratic Republic of the Congo. After setting up her own hospital in the village of Abumombazi in 1972,[2] she transferred to Danish Red Cross Hospital in Kinshasa in 1975. She returned to Denmark in 1977 after developing symptoms of an unknown infectious disease, which was later discovered to be AIDS. In June 1981, the Centers for Disease Control recognized AIDS. Rask was one of the first non-Africans, along with Arvid Noe and Robert Rayford, and first woman known to have died of AIDS-related
Margrethe P. Rask
Born 1930 Thisted, Denmark
Died 12 December 1977 (aged 46–47) Copenhagen, Denmark[1]
Cause of death AIDS-related complications
Years active 1964–1977
Known for One of the first non-Africans to die of HIV/AIDS
Medical career
Profession Surgeon

Aylar Lie
From Wikipedia, the free encyclopedia
Aylar Dianati Lie (Persian: آیلار دیاتی لی; born 12 February 1984)[1] is an Iranian-Norwegian actress, model, singer and former pornographic actress. She has worked as a music video actress and singer, appearing in several of Swedish musician Basshunter's music videos. She became famous after participating in the Norwegian Big Brother.
Early life
Aylar Dianati Lie was born in 1984 in Tehran.She moved to Norway when she was 3 years old. After arriving in Norway, her parents separated and Aylar was placed in the custody of the Child Protective Services. After a few years she was taken into the foster care system. Aylar had moved eighteen times before she began elementary school, and until finally she found foster parents. Her biological mother moved to the United States, while her father remained in constant struggle with the Norwegian authorities.[2]

WiLAN is a technology development and intellectual property licensing company with headquarters in Ottawa, Ontario, Canada.[1] In addition to collaborating with other patent portfolio owners, WiLan licenses its own portfolio of patents. Modern wireless communication methods are continuously researched and developed by WiLAN Labs. A publicly traded company on the Toronto Stock Exchange, Quarterhill Inc.'s principal subsidiary is WiLAN..

Wi-LAN Inc.

Company type	Subsidiary
Industry	Patent monetization
Founded	1992
Founder	Hatim Zaghloul Michel Fattouche
Headquarters	Ottawa, Ontario, Canada
Area served	Worldwide
Key people	Michael B. Vladescu, President and CEO
Products	Bluetooth, LTE, WiMAX, WiFi, CDMA, DOCSIS
Parent	Quarterhill Inc.
Website	wilan.com

History [edit]

In 1992, Hatim Zaghloul and Michel Fattouche co-founded WiLAN[2] after they developed together the Wideband Orthogonal Frequency Division Multiplexing (WOFDM),[3][non-primary source needed] and Multi-code Direct-sequence Spread Spectrum (MCDSSS).[4][non-primary source needed] Through WiLAN's efforts, the Federal Communications Commission (FCC) has allowed OFDM technology over the 2.4 GHz unlicensed ISM band for the Institute of Electrical and Electronics Engineers (IEEE) 802.11 standards. MC-DSSS (MultiCode-Direct-sequence Spread Ssectrum) is central to high speed CDMA applications, the main technology currently used by many cellphone networks.

In March 1998, WiLAN had its initial public offering.[5]

In November 1999, WiLAN and Philips invited companies to attend a meeting to form an alliance to promote the OFDM technology and its applications.[6] WiLAN was a founding member of the WiMAX Forum together with Ensemble, CossSpan, Harris, and Nokia.

From its founding in 1992 to 2000, WiLAN had success as interest and investment in the tech industry grew. However, in 2000, when the world's first tech bubble collapsed,

Talk details

Hatim Zaghloul is the inventor of the well-known daily-used Wi-FI's WiMAX's and LTE's WOFDM! He is renowned in the field and known among global companies in the field of telecommunications and technology. Hatim decided that he couldn't be stingy with the amount of information he has; so, he contributed to developing the Internet service to increase its speed and using it on mobile phones. In 1989, he joined a Canadian telecom company after he emigrated from Egypt in 1983. There, he established his invention in cooperation with his companion Dr. Micheal Fattoush. What a miraculous career he has.

According to Dr. Peter Gendelman and Muhammad Hatar, directors of the excavation for the Israel Antiquities Authority, the treasure was probably hidden during one of the more dramatic occurrences in Caesarea's long history – the conquest of Caesarea by the crusaders in the year 1101. Therefore, the coins are estimated to be about 900 years old. It is probable that their owners were killed or sold as slaves and never returned to claim their goods.

Color Climax Corporation ApS (CCC) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967 by the Theander brothers and began with the publication of the porn magazine ColorClimax, despite pornography being illegal in Denmark until 1969. It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.
Color Climax
Company type ApS
Industry Pornography
Founded 1967; 58 years ago
Founder Peter Theander Jens Theander
Fate Defunct (2024)
Headquarters Copenhagen, Denmark
Products Pornographic films, pornographic magazines
Films
In 1969, Denmark legalized the production of all kinds of pornography. In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality, some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.
Child pornography
Color Climax was the first to produce commercial child pornography films. From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography. Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.
Between 1971 and 1979, the company produced 10-minute films for its Lolita series. These films featured young girls, mainly with men, but sometimes with women or other children. The girls were mainly between the ages of 7 and 11 years; however, some were younger. These movies had titles such as Incest Family, Child Love and Pre-Teen Sex.

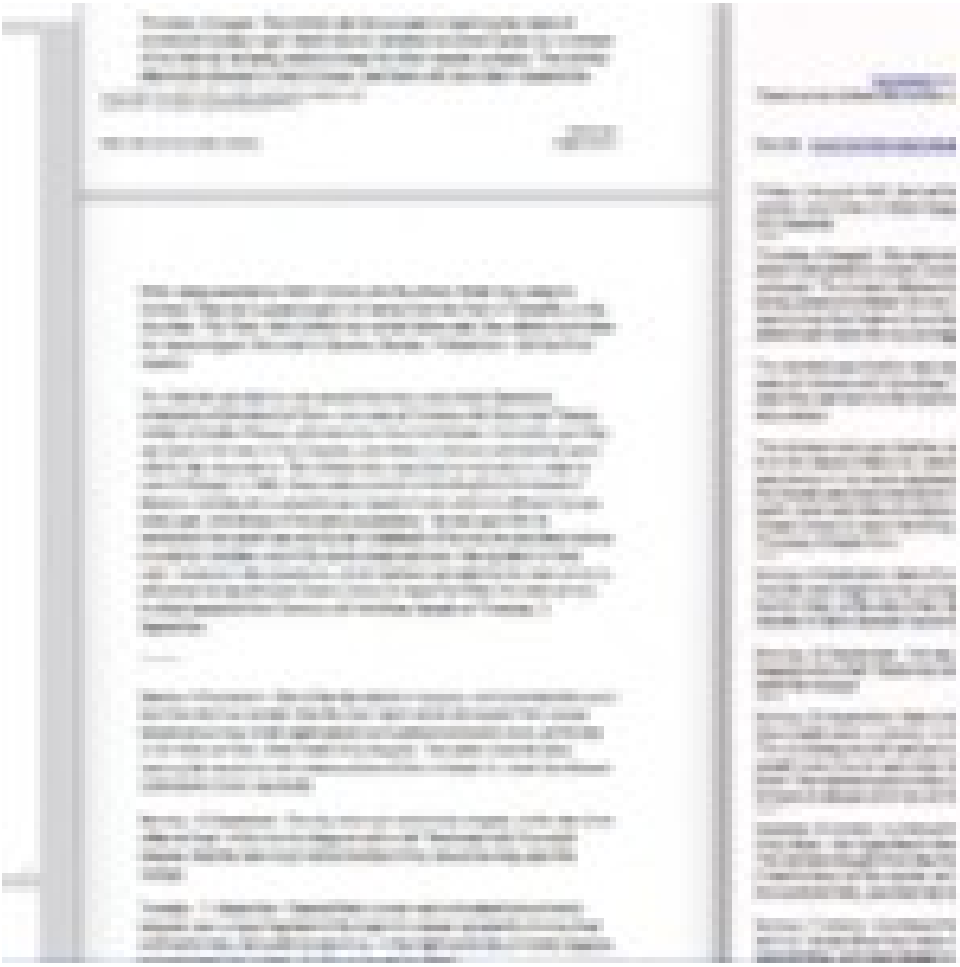
The global porn superpower with headquarters on Luxembourg's Boulevard Royal has changed its name from MindGeek to Aylo, hoping for a fresh start after its sale earlier this year and ongoing legal claims in the US that it profited from child pornography.



JOURNAL

OF THE

FIRST VOYAGE OF COLUMBUS.

This is the first voyage and the routes and direction taken by the Admiral Don Cristobal Colon when he discovered the Indies, summarized; except the prologue made for the Sovereigns, which is given word for word and commences in this manner.

In the name of our Lord Jesus Christ.

BECAUSE, O most Christian, and very high, very excellent, and puissant Princes, King and Queen of the Spains and of the islands of the Sea, our Lords, in this present year of 1492, after your Highnesses had given an end to the war with the Moors who reigned in Europe, and had finished it in the very great city of Granada, where in this present year, on the second day of the month of January, by force of arms, I saw the royal banners of your Highnesses placed on the towers of Alfambra, which is the fortress of that city, and I saw the Moorish King come forth from the gates of the city and kiss the royal hands of your Highnesses, and of the Prince my Lord, and presently in

Thursday, 9 August. The Admiral did not succeed in reaching the island of Gomera till Sunday night. Pinta, being assisted by Martin Alonzo and the others; finally they sailed to Gomera. They saw a great eruption of names from the Peak of Teneriffe, a lofty mountain. The Pinta, which before had carried latine sails, they altered and made her square-rigged. Returned to Gomera, Sunday, 2 September, with the Pinta repaired.

The Admiral says that he was assured by many respectable Spaniards, inhabitants of the island of Ferro, who were at Gomera with Dona Inez Peraza, mother of Guillen Peraza, afterwards first Count of Gomera, that every year they saw land to the west of the Canaries; and others of Gomera affirmed the same with the like assurances. The Admiral here says that he remembers, while he was in Portugal, in 1484, there came a person to the King from the island of Madeira, soliciting for a vessel to go in quest of land, which he affirmed he saw every year, and always of the same appearance. He also says that he remembers the same was said by the inhabitants of the Azores and described as in a similar direction, and of the same shape and size. Having taken in food, water, meat and other provisions, which had been provided by the men which he left ashore on departing for Grand Canary to repair the Pinta, the Admiral took his final departure from Gomera with the three vessels on Thursday, 6 September.

* * * * *

Sunday, 9 September. Sailed this day nineteen leagues, and determined to count less than the true number, that the crew might not be dismayed if the voyage should prove long. In the night sailed one hundred and twenty miles, at the rate of ten miles an hour, which make thirty leagues. The sailors steered badly, causing the vessels to fall to leeward toward the northeast, for which the Admiral reprimanded them repeatedly.

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.

Tuesday, 11 September. Steered their course west and sailed above twenty leagues; saw a large fragment of the mast of a vessel, apparently of a hundred and twenty tons, but could not pick it up. In the night sailed about twenty leagues, and reckoned only sixteen, for the cause above stated.

Friday, 3 August 1492. Set sail from the bar of Saltes at 8 o'clock, and proceeded with a strong breeze till sunset, sixty miles or fifteen leagues south, afterwards southwest and south by west, which is the direction of the Canaries.
*****

Thursday, 9 August. The Admiral did not succeed in reaching the island of Gomera till Sunday night. Martin Alonzo remained at Grand Canary by command of the Admiral, he being unable to keep the other vessels company. The Admiral afterwards returned to Grand Canary, and there with much labor repaired the Pinta, being assisted by Martin Alonzo and the others; finally they sailed to Gomera. They saw a great eruption of names from the Peak of Teneriffe, a lofty mountain. The Pinta, which before had carried latine sails, they altered and made her square-rigged. Returned to Gomera, Sunday, 2 September, with the Pinta repaired.

The Admiral says that he was assured by many respectable Spaniards, inhabitants of the island of Ferro, who were at Gomera with Dona Inez Peraza, mother of Guillen Peraza, afterwards first Count of Gomera, that every year they saw land to the west of the Canaries; and others of Gomera affirmed the same with the like assurances.

The Admiral here says that he remembers, while he was in Portugal, in 1484, there came a person to the King from the island of Madeira, soliciting for a vessel to go in quest of land, which he affirmed he saw every year, and always of the same appearance. He also says that he remembers the same was said by the inhabitants of the Azores and described as in a similar direction, and of the same shape and size. Having taken in food, water, meat and other provisions, which had been provided by the men which he left ashore on departing for Grand Canary to repair the Pinta, the Admiral took his final departure from Gomera with the three vessels on Thursday, 6 September.
*****

Sunday, 9 September. Sailed this day nineteen leagues, and determined to count less than the true number, that the crew might not be dismayed if the voyage should prove long. In the night sailed one hundred and twenty miles, at the rate of ten miles an hour, which make thirty leagues. The sailors steered badly, causing the vessels to fall to leeward toward the northeast, for which the Admiral reprimanded them repeatedly.

Monday, 10 September. This day and night sailed sixty leagues, at the rate of ten miles an hour, which are two leagues and a half. Reckoned only forty-eight leagues, that the men might not be terrified if they should be long upon the voyage.
*****

Sunday, 23 September. Sailed northwest and northwest by north and at times west nearly twenty-two leagues. Saw a turtle dove, a pelican, a river bird, and other white fowl;--weeds in abundance with crabs among them. The sea being smooth and tranquil, the sailors murmured, saying that they had got into smooth water, where it would never blow to carry them back to Spain; but afterwards the sea rose without wind, which astonished them. The Admiral says on this occasion "the rising of the sea was very favorable to me, as it happened formerly to Moses when he led the Jews from Egypt."
*****

Saturday, 6 October. Continued their course west and sailed forty leagues day and night; reckoned to the crew thirty-three. This night Martin Alonzo gave it as his opinion that they had better steer from west to southwest. The Admiral thought from this that Martin Alonzo did not wish to proceed onward to Cipango; but he considered it best to keep on his course, as he should probably reach the land sooner in that direction, preferring to visit the continent first, and then the islands.

Sunday, 7 October. Continued their course west and sailed twelve miles an hour, for two hours, then eight miles an hour. Sailed till an hour after sunrise, twenty-three leagues; reckoned to the crew eighteen. At sunrise the caravel Nina, who kept ahead on account of her swiftness in sailing, while all the vessels were striving to outsail

Rachel Corrie

Rachel Aliene Corrie (April 10, 1979 – March 16, 2003) was an American nonviolence activist and diarist.[1][2] She was a member of the pro-Palestinian International Solidarity Movement (ISM)[3] and was active throughout the Israeli-occupied Palestinian territories. In 2003, she was in Rafah, a city in the Gaza Strip, where the Israeli military was demolishing Palestinian houses at the height of the Second Intifada. While protesting the demolitions as they were being carried out, she was killed by an Israeli armored bulldozer that crushed her.[4][2][5][6]

Corrie was born in Olympia, Washington, the United States in 1979. After graduating from Capital High School, she went on to

Scranton Man Sentenced to 180 Months in Federal Prison for Producing Child Pornography

U.S. Attorney's Office
August 25, 2011

Middle District of Pennsylvania
(717) 221-4482

The United States Attorney's Office for the Middle District of Pennsylvania announced today that Nicholas Pinto, age 30, was sentenced today by Senior United States District Court Judge Edwin M. Kosik to a 180-month term of imprisonment for production of child pornography. Judge Kosik further ordered that Pinto serve a lifetime of supervised release following his release from prison and pay a $1,000 fine.

According to United States Attorney Peter J. Smith, Pinto was indicted on September 2, 2008, following a joint investigation by the Federal Bureau of Investigation and the Scranton Police Department into the production of child pornography. During the course of the investigation, Pinto was identified by several minor victims who reported that Pinto had video taped them on separate occasions engaging in sexually explicit conduct that depicted images of bondage.

A forensic examination was conducted on two digital cameras and a video camera that were seized from Pinto. The examination revealed over 180 sadomasochistic videos involving minor victims, some as young as 4 years old.

On May 12, 2010, Pinto pleaded guilty to production of child pornography.

This case is part of the Project Safe Childhood initiative. In February 2006, the Department of Justice created Project Safe Childhood, a nationwide initiative designed to protect children from online exploitation and abuse. Led by the United States Attorneys Offices, Project Safe Childhood marshals federal, state and local resources to better locate, apprehend, and prosecute individuals who exploit children via the Internet, as well as identify and rescue victims. For more information about Project Safe Childhood, please visit www.projectsafechildhood.gov/.

Assistant United States Attorney Michelle Olshefski prosecuted the case.

Yoshiyahu Yosef Pinto

From Wikipedia, the free encyclopedia

Yoshiyahu Yosef Pinto (Hebrew: יאשיהו יוסף פינטו, Arabic: يوشياهو يوسف بينتو; born September 27, 1973)[1] is an Israeli-Moroccan Orthodox rabbi who leads a global organization called Mosdot Shuva Israel [he]. Based in Ashdod and New York City, he is a Kabbalist.[2] *Globes* business journal named him in 2012 as one of the ten wealthiest rabbis in Israel.[3]

As part of a series of legal issues, he pleaded guilty in September 2014 to bribing a high-ranking Israeli police officer. He was sentenced on May 12, 2015, to one year in prison, and to pay a fine of 1 million shekels.[4] He began serving his prison sentence on February 16, 2016.[5] After his release, he became the Chief Rabbi of Morocco in 2019.[6]

Biography [edit]

Yoshiyahu Yosef Pinto was born in Israel to Moroccan parents.[2] On his father's side, he is the great-grandson of Chaim Pinto, a Moroccan sage;[7][8][unreliable source?] on his mother's side, he is the great-grandson of Rabbi Yisrael Abuhatzeira, also known as the Baba Sali.[9][10]

Pinto graduated from Ashkenazi Lithuanian yeshivas, and studied under Ashkenazi and Hassidic rabbis.[7][9] Pinto was also influenced by Satmar Hassidism and its teachings.[6]

Trump pardons accused child pornographer in North Carolina

Mint Hill man is just one of several men that Trump pardoned who have been accused or convicted of sexual abuse.

THOMAS MILLS
JAN 27, 2025

Just a day after taking office, Donald Trump pardoned David Paul Daniel, 37, of Mint Hill. Daniel is accused of manufacturing and possessing child pornography. According to accusations, Dale had sexual relations with two minors and took explicit photos of them. The photos were found on his phone after Daniel was arrested for assaulting Capitol police officers during the January 6 assault on Washington.

According to Law and Crime News and WBTV, a victim accused Daniel of sexually assaulting her multiple times between 2015 and 2019. She also said that Daniel photographed her naked and forced her to take showers with him. Daniel is also being investigated for statutory rape in Forsyth County. That victim's mother says Daniel was sexually active with her minor daughter in the summer of 2022.

(34) Chapter: The appearance of the Mahdi

(34) باب خُرُوجِ الْمَهْدِيِّ

It was narrated from Abu Sa'eed Al-Khudri that the Prophet (ﷺ) said:

"The Mahdi will be among my nation. If he lives for a short period, it will be seven, and if he lives for a long period, it will be nine, during which my nation will enjoy a time of ease such as it has never enjoyed. The land will bring forth its yield and will not hold back anything, and wealth at that time will be piled up. A man will stand up and say: 'O Mahdi, give me!' He will say: 'Take.'"

حَدَّثَنَا نَصْرُ بْنُ عَلِيٍّ الْجَهْضَمِيُّ، حَدَّثَنَا مُحَمَّدُ بْنُ مَرْوَانَ الْعُقَيْلِيُّ، حَدَّثَنَا عُمَارَةُ بْنُ أَبِي حَفْصَةَ، عَنْ زَيْدٍ الْعَمِّيِّ، عَنْ أَبِي صِدِّيقٍ النَّاجِيِّ، عَنْ أَبِي سَعِيدٍ الْخُدْرِيِّ، أَنَّ النَّبِيَّ ـ صلى الله عليه وسلم ـ قَالَ " يَكُونُ فِي أُمَّتِي الْمَهْدِيُّ إِنْ قُصِرَ فَسَبْعٌ وَإِلاَّ فَتِسْعٌ فَتَنْعَمُ فِيهِ أُمَّتِي نَعْمَةً لَمْ يَنْعَمُوا مِثْلَهَا قَطُّ تُؤْتِي أُكُلَهَا وَلاَ تَدَّخِرُ مِنْهُمْ شَيْئًا وَالْمَالُ يَوْمَئِذٍ كُدُوسٌ فَيَقُومُ الرَّجُلُ فَيَقُولُ يَا مَهْدِيُّ أَعْطِنِي فَيَقُولُ خُذْ ".

Mitsuyo Maeda (前田 光世, *Maeda Mitsuyo*, November 18, 1878 – November 28, 1941) naturalized as **Otávio Maeda** (Portuguese pronunciation: [o ˈtavju maˈedɐ]),[1] was a Japanese-born judōka and prizefighter in no holds barred competitions. He was known as **Count Combat** or ***Conde Koma*** in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshiharo Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]

Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]

Biography [edit]

Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]

Sci-Hub is a website established by Alexandra Elbakyan in 2011 that allows users to have free open access to scholarly articles. Elbakyan described the site as "The first pirate website in the world to provide mass and public access to tens of millions of research papers."[1] The website provides access to 85.2% of paywalled articles through the use of institutional networks to gain subscription access to publications.[1] Sci-Hub has been found to provide access to more articles than alternative access websites, including PubMed, ResearchGate, and Google Scholar.[2] While a portion of the institutional credentials is donated to Sci-Hub, others are potentially obtained through hacking or phishing.[3][4] While Sci-Hub has received support in some academic circles for its open access to articles and its opposition to the status quo in publishing, it has also received criticism for its illegality and alleged lack of academic integrity.

Justice Everywhere

Behind the paywall

In 2011, the 22-year-old Kazakhstani graduate student Alexandra Elbakyan created the well-known site Sci-Hub, in partnership with Library Genesis, known as LibGen. This created a *de facto* global and free-to-access online scientific library. By making much of the global scientific literature available through a few "clicks" on either one of the platforms, Elbakyan radically changed the ability of researchers and the public to access scientific knowledge. Her work was done largely in response to a growing concern that access to scientific research had become prohibitively expensive for many in the global scientific community; Sci-Hub took this research and made it freely accessible to anyone interested in consulting it from anywhere in the world, independently of one's affiliation with a specific higher education institution.

Efforts have been made to counter the publishers' hegemonic economic grip on research by other actors too. In September 2018, the EU made opening access to scientific publications a top priority. Unlike Elbakyan, the EU aims to open access to scientific knowledge through legal means and strategies, complying with publishers' copyright regulations.

However, not everyone agrees that this is appropriate. According to Robert-Jan Smits, the EU's outgoing director-general for research, science, and innovation,

> *At the moment we are putting a lot of public money at the national, European and global level into science. But we don't*

OXYGEN TRUE CRIME
Cult Week
Deadly Cults
Deadly Narcosatanist Cult Performed Human Sacrifices For Drug Cartels
Adolfo Constanzo led the Narco-Satanist Palo Mayombe cult in the gruesome torture and murder of college student Mark James Kilroy.
By Benjamin H. Smith | Apr 22, 2020, 3:42 PM ET
They were dubbed "Los Narcosatánicos" by Mexican newspaper El Universal, which, translated into English, means The Narco-Satanists. Others referred to them as "The Matamoros Cult," for the border town where their compound was located, or simply "Palo Mayombe," the name of the Afro-Cuban religion they warped to their own bloody ends.
Shepherded by charismatic cult leader Adolfo Constanzo and his "witch," Sara Aldrete, they are responsible for 15 murders, maybe more. Their victims were tortured then ritualistically slain. Human sacrifices, they believed, bestowed supernatural powers upon them and their associates

THE CRIME FILE
BELIEFS AS A CRIMINOGENETIC FACTOR
Thursday, April 28, 2016
The "Narco-Satanist" Serafín Hernández speaks out 25 years after the Matamoros case.
Serafin Hernández Garcia was about to turn 21 in 1989 when he was arrested, he says, at the home of his uncle Elio Hernández Rivera, although the police version contradicts this since they were detained when they passed a checkpoint near the Santa Elena ranch, which was the temple of sacrifices of the gang known as the Narcosatánicos.
It was the year 1999, ten years had passed since the events at the Santa Elena ranch in Matamoros, Tamaulipas, where the bodies of 15 people were found murdered and dismembered in satanic rites and two involved sentenced to 67 years in prison in the first instance, Serafín Hernández Garcia and Sergio Martínez Salinas, agreed to be interviewed by Hora Cero at the Social Readaptation Center (Cereso) in Ciudad Victoria where they were transferred in 1993.
On April 9, 1989, agents of the State Judicial Police and the Federal Judicial Police, with the support of Mexican preventive agents and investigators from the United States, arrested four people (later more were involved), including those interviewed, for the kidnapping of 21-year-old American citizen Mark Kilroy. However, the investigation led to a gang of people who performed satanic rites, killing and dismembering their victims.
The leaders were Cuban Adolfo de Jesús Constanzo, based in Miami, Florida, and Sara Aldrete Villarreal, originally from Matamoros, currently in prison, known as "The

Denmark is one of the world's finest countries. There are no slums and poverty is non existent. All Danes have health care, good housing, a clean environment to live in, and get good education. The women are beautiful and the streets of Copenhagen are colorful and vibrant.

In July 1998 many newspapers published the results of a poll that measured human ignorance. The poll tested thousands of people on questions like; "What's a molecule?" (Only 11% answered correctly!) The poll discovered that only half of the interviewees knew the earth took a year to revolve around the sun and that early humans did not live at the same time as dinosaurs! These were the results for every country tested except for Denmark. Only the Danes scored lower on the worldwide ignorance scale!

When people think of cannibals they envision vicious barbarians living in remote cultures deep in far away jungles. However, anthropologists and historians, such as Will Durant, believe that, "Cannibalism was at one time practically universal." * We are all probably descendants of people who enjoyed human flesh.

But do not think that this cannibalism existed thousands of years ago in the stone age. Pulitzer Prize winner, and perhaps the 20th century's greatest historian, Will Durant wrote that cannibalism took place in Europe, in Denmark at least as late as the eleventh century.**

So what is it about the modern Danes that led them to build a beautiful and just society with the world's highest standard of living? Could it be that their ancestors had a little extra protein boost?

* Durant, Will: The Story Of Civilization, Vol. 1 Our Oriental Heritage, *Page 10*.

Color Climax Corporation

Article Talk — Read Edit View history Tools — 12 languages

From Wikipedia, the free encyclopedia

Color Climax Corporation ApS (**CCC**) is a defunct Danish pornography producer headquartered in Copenhagen. It was founded in 1967[1] by the Theander brothers[2] and began with the publication of the porn magazine *ColorClimax*, despite pornography being illegal in Denmark until 1969.[3] It was one of the leading producers of European pornography up until the 1990s. Since then, CCC has sold most of its assets to the Sansyl Group in the Netherlands. As of 2024, the website of CCC has been taken down over concerns related to its history of involvement in child pornography.

Color Climax

Company type	ApS
Industry	Pornography
Founded	1967; 58 years ago
Founder	Peter Theander[1] Jens Theander[2]
Fate	Defunct (2024)
Headquarters	Copenhagen, Denmark
Products	Pornographic films, pornographic magazines

Films [edit]

In 1969, Denmark legalized the production of all kinds of pornography.[5] In the 1970s, CCC began to produce 8 mm pornographic film loops. By the 1980s, video tape had replaced the film loops, sometimes as compilations of previously released material. CCC films usually had a wider range of contents including bestiality,[7] some of which last starred Bodil Joensen, and other content not widely available at the time. Urolagnia was also displayed. By 2004, Color Climax had past film stars such as Rocco Siffredi and John Holmes in their archives on their website and Raymond Bacharach also known as John Thompson was part of the backstage crew.

Child pornography [edit]

Color Climax was the first to produce commercial child pornography films.[6] From 1969 to 1979, Color Climax was responsible for the relatively large-scale distribution of child pornography.[8][9] Danish laws on pornography had been totally repealed since 1969, only punishing with modest fines those making obscene material with children.[9][10]

Between 1971 and 1979, the company produced 10-minute films for its *Lolita* series.[6][10][11] These films featured young girls, mainly with men, but sometimes with women or other children.[6][10][11] The girls were mainly between the ages of 7 and 11 years; however, some were younger.[6][10][11] These movies had titles such as *Incest Family*, *Child Love* and *Pre-Teen Sex*.[6][10]

where are the children used by Jens and Peter Theander

[edit]

They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.

This company [edit]

This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

but didnt they violate other laws like age of consent laws in the process? so even if they themselves couldnt be prosecuted couldnt the males or adults in those videos? — Preceding unsigned comment added by 24.7.51.231 (talk) 08:03, 30 August 2010 (UTC) [reply]

Is there any reference or article which records or logs this TV2 report/s? I feel this is important since CCC are remaining tight lipped about there role in this history of child porn production. Eg who were the producers? Why did CCC not volunteer their names? Can any sites or article be recommended which takes this aspect forward? Very important. To put this in context section 234 of the Danish Criminal code (1969) states that the distribution/sale of porn to people under 16 years old is prohibited.

But the ban on the production and distribution of child pornography in Denmark didnt exist until section 235 of the Danish Criminal Code (1980). So the picture this paints is that for almost 11 years the Danish establishment allowed Child Pornography to be sold and consumed , even though porn couldnt be sold to under 16's. So Denmark in the 1970's had the scenario of adults watching pre-teen children filmed having sex/being raped with/by adults whilst at the same time this porn couldnt be sold to people under 16!! Anyone want to explain this disturbing fact to me?! There is 11 years of Danish history that hasnt been researched or recorded here. Needs a lot of work.

The age of consent in Denmark is 15 years of age. Thus it has never been legal to produce pornographic material in Denmark using children under the age of 15 as models in adult situations.

About Me

Ronald Willy, M D.

Kabul, Afghanistan

I'm a US Navy physician deployed for one year to Kabul, Afghanistan. The reports, opinions and musings posted here are my own. This is NOT a US Department of Defense website, and the posts do not necessarily represent the official views or policies of the US Department of Defense.

Sunday, May 11, 2008

Afghan's TALLERBAN knows nothing about basketball

Photograph: It's not a cut-out figure. It's Afghanistan's tallest man standing next to me.

From a distance I saw him entering the hospital and the other Afghans, whose average height approximates that of Americans, looking at him in amazement. Two physicians who had taken photographs of him with their cell phones looked at me, recognized that I, too, was shocked by the man's height, and said "The tallest man in Afghanistan!"

I did what any reasonable person would do: I rushed into the hospital to get a photograph with him. I found him just off the main lobby waiting for the elevator; and when I asked Abdul Mutalib by voice and gesticulation if he would pose with me for a photograph, he smiled and said yes. (I know very little about the Afghans as a people, but I am sure of this: They will abort any activity to be subject of a photograph, no matter what their height.) While Abdul's companion took photographs with my camera, two dozen other Afghans gathered in front of us to marvel at Abdul's height and take snap shots of us with their cell phones cameras.

Although Abdul speaks very limited English, I asked him the question that I'm sure was forefront in the minds of everyone gathered there: Do you play basketball? He looked puzzled by my inquiry, but even more confused when I pantomimed a jump shot. (Two young boys present both giggled, clearly unimpressed with my limited vertical leap.) Abdul did understand my Dari when I asked him his name, and he then told me, in broken English, that he was at the hospital for his feet which give him all kinds of problems. He then ducked into the elevator, which has a ceiling height of about six feet -- which was at least 1 ½ feet too low for Abdul. (I should have photographed Abdul as he folded himself into the elevator car, but I was distracted again by the two young boys who now where not only giggling at me, but pantomiming jump shots themselves. I must say, their form showed promise.)

Abdul impressed me immediately for two reasons. First, although he was extraordinarily tall, he had a symmetric physique. Some "giants" suffer from acromegaly, which is a disease of increased growth hormone and usually leaves the hands and facial bones disproportionately large. Think of the motivational speaker Anthony Robbins. Other extremely tall people sometimes have a condition called Marfan Syndrome that produces abnormally long, thin limbs. Speculation holds that Abraham Lincoln was a victim; and some people believe that Osama bin Laden has Marfan Syndrome. (I'll not be journeying to the Afghan-Pakistan border on a medical mission to confirm that diagnosis.)

The second observation of Abdul that impressed me tremendously was the fit of his suit. Even though he towered more than seven feet tall, he was a rare Afghan picture of sartorial splendor. I haven't noticed any Big & Tall shops in Afghanistan, but even those odd-sized specialists wouldn't have anything in stock for Abdul. I'm upset that I didn't get the name of Abdul's tailor, as a nice suit of clothing for my 5' 10" frame would be a simple project for a man able to convert an acre of wool gabardine into an impeccable outfit for a seven-footer.

An Afghan interpreter, after seeing the photograph above, recalled a television interview of Abdul. He is a farmer from southern Afghanistan. I would like to see Abdul's tools, as he surely possesses the world's longest garden hoe and spade shovel. The television show also proclaimed him the world's second-tallest man. I'm not sure where the world's tallest man resides, but I recommend he come to Afghanistan and visit Abdul's tailor when he needs a new suit.

"Black Peter" redirects here. For other uses, see Black Peter (disambiguation).

Not to be confused with Piet Zwart.

Zwarte Piet (Dutch: [ˈzʋɑrtə ˈpit]; Luxembourgish: *Schwaarze Péiter*; West Frisian: *Swarte Pyt*; Indonesian: *Pit Hitam*), also known in English by the translated name **Black Pete**, is the companion of Saint Nicholas (Dutch: *Sinterklaas*; French: *Saint-Nicolas*; West Frisian: *Sinteklaas*; Luxembourgish: *Kleeschen*) in the folklore of the Low Countries. Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.[1][2]

The depiction of Zwarte Piet has gone through several changes since the mid 19th century. The earliest known illustration of the character comes from an 1850 book by Amsterdam schoolteacher Jan Schenkman and portrays him as a black Moor. This became the dominant representation of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character, since deemed a racial stereotype, usually put on blackface and colourful Renaissance attire in addition to curly wigs and bright red lipstick.[3]

This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed.[2] Alternatives later debuted, among them multicolored Piets. By 2021 a revised version, dubbed **Sooty Piet** (Dutch: *Roetveegpiet*), had become more common than the traditional variant at public events and in television specials, films, social media, and advertising.[4] Sooty Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

Traditions [edit]

The Zwarte Piet character is part of the annual Feast of St. Nicholas that is celebrated on the evening of 5 December (*Sinterklaasavond*, which is known as St. Nicholas' Eve in English) in the Netherlands, Curaçao and Aruba. This is when presents and sweets are traditionally distributed to

Zwarte Piet

From Wikipedia, the free encyclopedia

Zwarte Piet (Dutch: [ˈzʋɑrtə ˈpit]; Indonesian: Pete Hitam; literally: Black Pete) is the companion of Sinterklaas (Dutch: Sinterklaas; French: Saint-Nicolas; West Frisian: Sinteklaas; Luxembourgish: Kleeschen) in the folklore of the Low Countries. Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.[1][2]

The depiction of Zwarte Piet has gone through several changes since the mid-19th century. The earliest known illustration of the character comes from an 1850 book by amsterdam schoolteacher Jan Schenkman and portrays him as a moor slave. This became the dominant depiction of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character wore blackface, stereotypical visuals put on like Afro and colourful Renaissance attire in addition to curly wigs and bright red lipstick.[3]

The version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed.[4] Many citizens later debunked, among them Quirijn Peels. By 2021 a revised version, dubbed Roetveegpiet (Dutch: Roetveegpiet), had become more common than the traditional variant at public events and in television broadcasts. Also, in most media and advertising.[5] Roetveegpiet features the costume and look of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

Light skin

9 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Light skin is a human skin color that has a low level of eumelanin pigmentation as an adaptation to environments of low UV radiation.[1][2] Due to migrations of people in recent centuries, light-skinned populations today are found all over the world.[2][3] Light skin is most commonly found amongst the native populations of Europe, East Asia,[4][5][6] West Asia, Central Asia, Siberia, and North Africa as measured through skin reflectance.[7] People with light skin pigmentation are often referred to as "white"[8][9] although these usages can be ambiguous in some countries where they are used to refer specifically to certain ethnic groups or populations.[10]

Ethnic groups such as Norwegians (top left), Russians (top right), and Koreans (bottom), are examples of people around the world who have light skin

Humans with light skin pigmentation have skin with low amounts of eumelanin, and possess fewer melanosomes than humans with dark skin pigmentation. Light skin provides better absorption qualities of ultraviolet radiation, which helps the body to synthesize higher amounts of vitamin D for bodily processes such as calcium development.[2][11] On the other hand, light-skinned people who live near the equator, where there is abundant sunlight, are at an increased risk of folate depletion. As a consequence of folate depletion, they are at a higher risk of DNA damage, birth defects, and numerous types of cancers, especially skin cancer.[12] Humans with darker skin who live further from the tropics may have lower vitamin D levels, which can also lead to health complications, both physical and mental, including a greater risk of developing schizophrenia.[13] These two observations form the "vitamin D–folate hypothesis", which attempts to explain why populations that migrated away from the tropics into areas of low UV radiation[14] evolved to have light skin pigmentation.[2][15][16]

The distribution of light-skinned populations is highly correlated with the low ultraviolet radiation levels of the regions inhabited by them. Historically, light-skinned populations almost exclusively lived far from the equator, in high latitude areas with low sunlight intensity.[17]

From Wikipedia, the free encyclopedia

Light skin is a human skin color that has a low level of eumelanin pigmentation as an adaptation to environments of low UV radiation.[1][2] Due to migrations of people in recent centuries, light-skinned populations today are found all over the world.[3][4] Light skin is most commonly found amongst the native populations of Europe, East Asia,[5][6][7] West Asia, Central Asia, Siberia, and North Africa as measured through skin reflectance.[7] People with light skin pigmentation are often referred to as "white"[8][9] although those usages can be ambiguous in some countries where they are used to refer specifically to certain ethnic groups or populations.[10]

Ethnic groups such as Norwegians (top left), Russians (top right), and Koreans (bottom) are examples of people around the world who have light skin

Humans with light skin pigmentation have skin with low amounts of eumelanin, and possess fewer melanosomes than humans with dark skin pigmentation. **Light skin provides better absorption qualities of ultraviolet radiation, which helps the body to synthesize higher amounts of vitamin D for bodily processes such as calcium development.[2][11] On the other hand, light-skinned people who live near the equator, where there is abundant sunlight, are at an increased risk of folate depletion.** As a consequence of folate depletion, they are at a higher risk of DNA damage, birth defects, and numerous types of cancers, especially skin cancer.[12] Humans with darker skin who live further from the tropics may have low vitamin D levels, which can also lead to health complications, both physical and mental, including a greater risk of developing schizophrenia.[13] These two observations form the "vitamin D–folate hypothesis", which attempts to explain why populations that migrated away from the tropics into areas of low UV radiation[14] evolved to have light skin pigmentation.[2][15][16]

Afghan's TALLERBAN knows nothing about basketball

Photograph: It's not a cut-out figure. It's Afghanistan's tallest man standing next to me.

From a distance I saw him entering the hospital and the other Afghans, whose average height approximates that of Americans, looking at him in amazement. Two physicians who had taken photographs of him with their cell phones looked at me, recognized that I, too, was shocked by the man's height, and said "The tallest man in Afghanistan!"

I did what any reasonable person would do: I rushed into the hospital to get a photograph with him. I found him just off the main lobby waiting for the elevator; and when I asked Abdul Mutalib by voice and gesticulation if he would pose with me for a photograph, he smiled and said yes. (I know very little about the Afghans as a people, but I am sure of this: They will abort any activity to be subject of a photograph, no matter what their height.) While Abdul's companion took photographs with my camera, two dozen other Afghans gathered in front of us to marvel at Abdul's height and take snap shots of us with their cell phones cameras.

Although Abdul speaks very limited English, I asked him the question that I'm sure was forefront in the minds of everyone gathered there: Do you play basketball? He looked puzzled by my inquiry, but even more confused when I pantomimed a jump shot. (Two young boys present both giggled, clearly unimpressed with my limited vertical leap.) Abdul did understand my Dari when I asked him his name, and he then told me, in broken English, that he was at the hospital for his feet which give him all kinds of problems. He then ducked into the elevator, which has a ceiling height of about six feet -- which was at least 1 ½ feet too low for Abdul. (I should have photographed Abdul as he folded himself into the elevator car, but I was distracted again by the two young boys who now where not only giggling at me, but pantomiming jump shots themselves. I must say, their form showed promise.)

Abdul impressed me immediately for two reasons. First, although he was extraordinarily tall, he had a symmetric physique. Some "giants" suffer from acromegaly, which is a disease of increased growth hormone and usually leaves the hands and facial bones disproportionately large. Think of the motivational speaker Anthony Robbins. Other extremely tall people sometimes have a condition called Marfan Syndrome that produces abnormally long, thin limbs. Speculation holds that Abraham Lincoln was a victim; and some people believe that Osama bin Laden has Marfan Syndrome. (I'll not be journeying to the Afghan-Pakistan border on a medical mission to confirm that diagnosis.)

The second observation of Abdul that impressed me tremendously was the fit of his suit. Even though he towered more than seven feet tall, he was a rare Afghan picture of sartorial splendor. I haven't noticed any Big & Tall shops in Afghanistan, but even those odd-sized specialists wouldn't have anything in stock for Abdul. I'm upset that I didn't get the name of Abdul's tailor, as a nice suit of clothing for my 5' 10" frame would be a simple project for a man able to convert an acre of wool gabardine into an impeccable outfit for a seven-footer.

An Afghan interpreter, after seeing the photograph above, recalled a television interview of Abdul. He is a farmer from southern Afghanistan. I would like to see Abdul's tools, as he surely possesses the world's longest garden hoe and spade shovel. The television show also proclaimed him the world's second-tallest man. I'm not sure where the world's tallest man resides, but I recommend he come to Afghanistan and visit Abdul's tailor when he needs a new suit.

Afghan's TALLERBAN knows nothing about basketball

Photograph: It's not a cut-out figure. It's Afghanistan's tallest man standing next to me.

From a distance I saw him entering the hospital and the other Afghans, whose average height approximates that of Americans, looking at him in amazement. Two physicians who had taken photographs of him with their cell phones looked at me, recognized that I, too, was shocked by the man's height, and said "The tallest man in Afghanistan!"

I did what any reasonable person would do: I rushed into the hospital to get a photograph with him. I found him just off the main lobby waiting for the elevator; and when I asked Abdul Mutalib by voice and gesticulation if he would pose with me for a photograph, he smiled and said yes. (I know very little about the Afghans as a people, but I am sure of this: They will abort any activity to be subject of a photograph, no matter what their height.) While Abdul's companion took photographs with my camera, two dozen other Afghans gathered in front of us to marvel at Abdul's height and take snap shots of us with their cell phones cameras.

Although Abdul speaks very limited English, I asked him the question that I'm sure was forefront in the minds of everyone gathered there: Do you play basketball? He looked puzzled by my inquiry, but even more confused when I pantomimed a jump shot. (Two young boys present both giggled, clearly unimpressed with my limited vertical leap.) Abdul did understand my Dari when I asked him his name, and he then told me, in broken English, that he was at the hospital for his feet which give him all kinds of problems. He then ducked into the elevator, which has a ceiling height of about six feet -- which was at least 1 ½ feet too low for Abdul. (I should have photographed Abdul as he folded himself into the elevator car, but I was distracted again by the two young boys who now where not only giggling at me, but pantomiming jump shots themselves. I must say, their form showed promise.)

Abdul impressed me immediately for two reasons. First, although he was extraordinarily tall, he had a symmetric physique. Some "giants" suffer from acromegaly, which is a disease of increased growth hormone and usually leaves the hands and facial bones disproportionately large. Think of the motivational speaker Anthony Robbins. Other extremely tall people sometimes have a condition called Marfan Syndrome that produces abnormally long, thin limbs. Speculation holds that Abraham Lincoln was a victim; and some people believe that Osama bin Laden has Marfan Syndrome. (I'll not be journeying to the Afghan-Pakistan border on a medical mission to confirm that diagnosis.)

The second observation of Abdul that impressed me tremendously was the fit of his suit. Even though he towered more than seven feet tall, he was a rare Afghan picture of sartorial splendor. Joel

Greenberg

Politician

Joel Micah Greenberg is an American politician and former tax collector of Seminole County, Florida. In 2020, Greenberg was arrested and charged with multiple federal offenses. He was indicted on 33 criminal counts: theft, stalking, sex trafficking, cryptocurrency fraud, and Small Business Administration loan fraud. **Wikipedia**

Born: February 04, 1984, Altamonte Springs, Florida, U.S.

Political party: Republican

Children: 2

after the event, according to two witnesses.

The Florida congressman's one-time wingman, Joel Greenberg, will identify that escort to investigators as one of more than 15 young women Gaetz paid for sex, according to a source familiar with the investigation.

But what distinguishes this woman, Megan Zalonka, is that she turned her relationship with Greenberg into a taxpayer-funded no-show job that earned her an estimated $7,000 to $17,500, according to three sources and corresponding government records obtained by The Daily Beast.

On Oct. 26, 2019, Gaetz attended the "Trump Defender Gala" fundraiser as the featured speaker at the Westgate Lake Resort in Orlando. Two witnesses present recalled friends reconvening at Gaetz's hotel room for an after-party, where Zalonka prepared lines of cocaine on the

Phoenix 'sex church' leader found guilty

Tracy Elise charged with money laundering, prostitution.

We're here to listen

By: Associated Press

Posted 5:44 PM, Mar 02, 2016

and last updated 6:48 PM, Mar 02, 2016

The leader of the Phoenix Goddess Temple that offered spiritual and touch-based healing services in exchange for donations has been convicted of operating a house of prostitution.

A Maricopa County Superior Court jury found Tracy Elise guilty Wednesday on all 22 counts including 12 of money laundering.

True Erotic Crime Story: A Notorious Sex Temple and Its Ruling Pimp Priestess

By Jim Walsh **May 12, 2016, 11:30am**

Share:

Tracy Elise, often garbed in gauzy dresses, jewel-hued scarves, and traditional bindi glued over her third eye, was known as the Mystic Mother to the priestesses of her coven. A 55-year-old mother of three, Elise would invite men and women to her temple to heal them through sensual massage and therapeutic tantric sex sessions. She considers herself a priestess and healer; a jury in Arizona just

Merrick

Posted by APOLLA13 *on* APRIL 1, 2019

Merrick comes from a Welsh surname, a variant of **Meurig** which is the Welsh form of **Maurice** which comes from Late Latin **Mauritius**, a Roman name which is a derivative of **Maurus** meaning "dark-skinned", in reference to someone who came from the country of Mauritania or who was of Moorish descent. It derives from Ancient Greek *mauros* (black, dark). As an English surname, it derives from a Norman source meaning "fame power", made up from Germanic elements *meri, mari* (fame) and *ric* (power); as a Scottish surname it comes from a locational name for someone who came from a

The Civil War

Search For Soldiers

The Civil War was the first war in American history in which a substantial proportion of the adult male population participated. Almost every American would have known friends, family members, or neighbors who marched off to war, many never to return. The service records of these men, North and South, are contained in the Civil War Soldiers and Sailors System.

Please note that the Civil War Soldiers and Sailors System contains just an index of the men who served in the Civil War with only rudimentary information from the service records (including name, rank and unit in which they served). The full service records are housed at the National Archives and Records Administration. Learn more about obtaining copies of full service records.

Additionally, all records in this database have been transcribed from the National Archives' original documents; alternate names and/or misspellings are recorded as initially documented.

CULT HORROR I was forced to marry notorious paedophile cult leader David Berg at age three

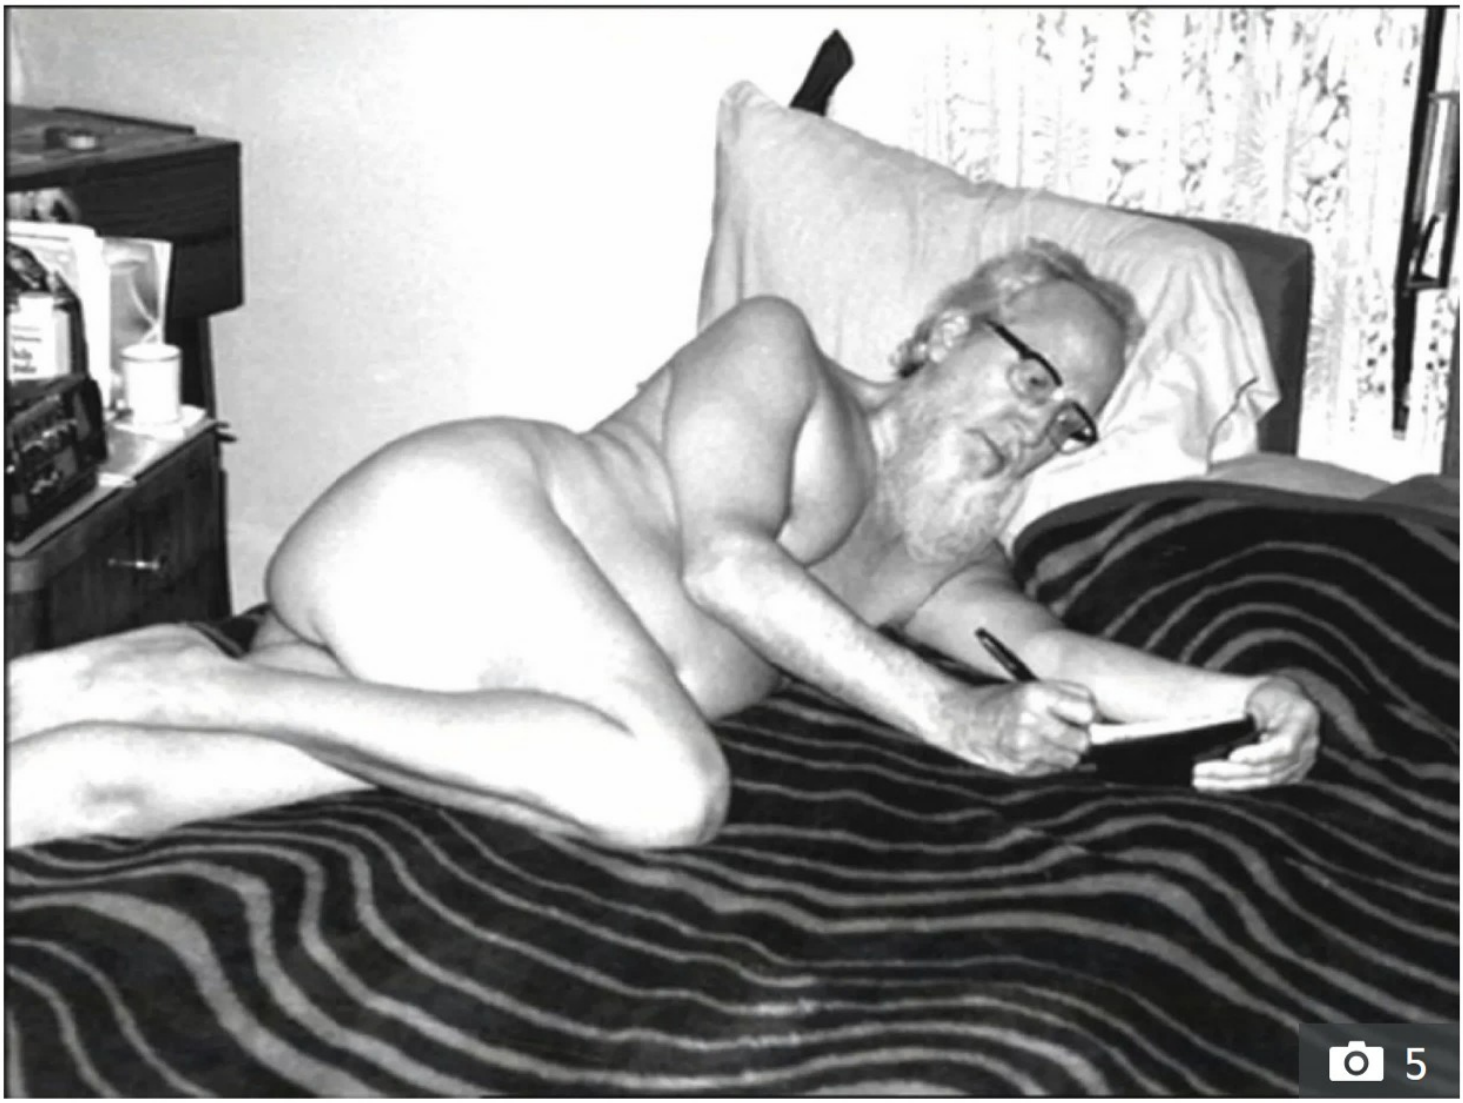
Kate Graham

Published: 19:05 ET, Jul 31 2021 | Updated: 3:22 ET, Aug 1 2021

BORN into one of the world's most notorious cults, Serena Kelley, 38, suffered at the hands of its paedophile leader.

Now a trauma specialist in Houston, Texas, she shares her story of empowerment and hope.

But I was determined to put my past behind me – if anyone asked, I'd lie that I'd grown up abroad because my parents worked for an NGO.



Berg used his position to sexually abuse children

In 2013 I enrolled at university in Austin, Texas, to study corporate communications, but although I came across as confident and happy, I was struggling with anxiety, an eating disorder and depression.

The Israeli military has used Palestinians as human shields in Gaza, soldier and former detainees say

By Mick Krever, Jeremy Diamond and Abeer Salman | Video by Mark Baron and Agne Jurkenaite, CNN

7 minute read

Updated 5:59 AM EDT, Thu October 24, 2024

Jerusalem (CNN) — The Israeli military has forced Palestinians to enter potentially booby-trapped houses and tunnels in Gaza to avoid putting its troops in harm's way, according to an Israel Defense Forces (IDF) soldier and five former detainees who said they were victims of the practice.

The soldier, who said his unit held two Palestinian prisoners for the explicit purpose of using them as human shields to probe dangerous places, said the practice was prevalent among Israeli units in Gaza.

"We told them to enter the building before us," he explained. "If there are any booby traps, they will explode and not us."

It was so common in the Israeli military that it had a name: "mosquito protocol."

HIV and AIDS Rashes and Skin Conditions

Medically Reviewed by Zilpah Sheikh, MD on March 10, 2024 | Written by Stephanie Watson

HIV and Your Skin

Skin changes could be the first sign that you have HIV. About 90% of people with HIV get a rash or other skin condition at some point. The virus weakens the immune system and makes it easier for germs that cause skin problems to get in. Some HIV treatments can cause rashes. But thanks to new medicines, when this happens, you can replace the medicine that caused it with another.

The Sackler Family: An Empire of Misery and a Legacy of Opioids.

The Sackler family, once revered for its wealth and philanthropic endeavours, is now infamous for its central role in one of the most devastating public health crises in modern history—the opioid epidemic. The family, primarily through their ownership of Purdue Pharma, is at the heart of a crisis that has claimed the lives of hundreds of thousands of people across the United States. Purdue's most infamous

Grethe Rask

Grethe Rask

Margrethe (Grethe) P. Rask

Born	1930 Thisted, Denmark
Died	12 December 1977 (aged 47) Copenhagen, Denmark[1]
Years active	1964–1977
Known for	Being one of the first non-Africans to die of HIV/AIDS
Profession	Surgeon

Margrethe P. Rask (1930 – December 12, 1977), better known as **Grethe Rask**, was a Danish physician and surgeon who practiced medicine in what was then known as Zaïre (today the Democratic Republic of the Congo). After setting up her own hospital in a village called Abumombazi in 1972, she transferred to Danish Red Cross Hospital in Kinshasa in 1975 before returning to Denmark in 1977 following symptoms of an unknown disease, which was later discovered to be AIDS. Rask, who died three and a half years prior to AIDS being recognized by the Centers for Disease Control in June 1981, was one of the first non-Africans (along with Arvid Noe) known to have died of AIDS-related causes.

What Does 666 Mean in the Bible? Why Is it the Number of the Beast?

The number 666 is the mark of the beast, as referenced in the Book of Revelation. In apocalyptic end times, the mark of the beast is taken by those who value personal safety over fidelity to Christ. The mark of the beast is the mark of mankind. It is the opposite of the divine plan of salvation.

From Wikipedia, the free encyclopedia

Richard Duane "Ricky" Ray (January 28, 1977 – December 13, 1992), **Robert David Ray** (January 27, 1978 – October 20, 2000), and **Randy Devone Ray** (June 3, 1979 – May 18, 2023) were three hemophiliac brothers who were diagnosed with HIV in 1986 due to HIV-infected infusions of Factor VIII.

Biography [edit]

Ricky, Robert, and Randy were hemophiliacs who contracted HIV from infusions of Factor VIII when they were less than 8 years old. Born to Arcadia, Florida, natives Louise and Clifford Ray, the family was exiled from Arcadia as community members feared contracting the disease. Memorial Elementary School, in DeSoto County, would not allow them to attend school due to their diagnosis. In March 1987, they moved to Bay Minette, Alabama, to stay with Louise's mother. The brothers were enrolled in public school there but their medical records were later revealed. They were put out of school again, and after six weeks, the family returned to Arcadia.[1] As a compromise, the DeSoto County School Board offered the brothers a portable, self-contained classroom on campus away from other students. The family turned the proposition down, and in June 1987, they sued the school system, claiming wrongful segregation.[1] A United States federal court ruled against the DeSoto County School Board and allowed the children to attend public school despite their diagnosis. The Rays were victorious in their legal battle, winning a $1.1 million settlement.[2]

Hector Scott

Man whore Hector Scott was convicted of breaching the prostitution act in Canberra Australia for operating a commercial sex business out of his apartment. According to media reports the health department contacted over 500 people after finding out about his HIV status.

Prostitute admits spreading HIV

6 Feb, 2008 08:50 PM Quick Read

Save Share

KEY POINTS:

•

An HIV-positive male prostitute has admitted to potentially spreading the deadly virus in Canberra.

Hector Scott has pleaded guilty in the ACT Magistrates Court to providing a commercial sexual service while knowing he was infected with a sexually-transmitted disease, and failing to register as a sex worker.

Health officials are now sifting through a list of about 250 people Scott has been in contact with in recent weeks, and trying to determine how many people he may have infected.

An alert was issued in New Zealand after Scott flew here at Christmas, but health authorities say no-one has reported any contact with him here.

Information Source: First hand knowledge(ex: confession)

Timothy Seder

He is very cute, charming and claims his family is rich but he can't keep a job and when he works he spends it all on booze and drugs. He likes young girls that are easy to control. He contracted the STD cheating on his wife with Leslie Olsen and gave it to his wife so she wouldn't leave him. He continues to have sex without protection and doesn't care that he is spreading a disease. This can not be cured!

Charlie Jacobs

The great question we all ask ourselves at some point is: "Why am I here? What is my life's purpose?". I know that question well. In August 2010 – I spent a lot of time trying to figure out the answer …

It has been 10 years since I was diagnosed as HIV positive. A decade during which I had tried to understand what that meant, trying to fight going on ARVs, scared to make a lifetime's commitment to the medication. 10 long years of drugs use and abuse. A whole decade spent hanging out with my good friend "denial". And there I was, August 2010, with a CD4 count of 29, 18 kgs lost (now I know why they call this disease "Slim"). I was so sick, I thought I was going to die. I couldn't walk from the bedroom to the kitchen without wanting to pass out from exhaustion. I was lucky – my best friend's mother took me in, and for three months she nursed me back to health.

Being that sick made me realise I had to make the commitment to life. There was no more room for denial. It was time to go onto ARV treatment, to give up my lifestyle and beloved business in Nelspruit and move back to JHB, to be with my friends. (My family was there too – but I still couldn't bring myself to tell them: I was afraid of the disappointment I thought I would see in their eyes.)
As I lay in that bed I asked God to help me, to give me a purpose and He did. His answer came through a book given to me by a friend, "The Purpose Driven Life". "We are all here to learn as much as we can from each other. To use that knowledge to teach. To give back to those that can benefit from our life experiences."
And I had many of those …
2002 was a perfect storm of bad timing. I was 20, I had just lost my best friend, my mother, in a tragic accident and my first gay relationship of three years had come to an end. Still young and very naive, I went out and had unprotected sex with a good friend, thinking: "HIV is something that only happens to other people".
A few months later a work colleague came to me in tears. She told me that she had unprotected sex with someone she hardly knew, completely out of character for her. She asked me if I would go with her to be tested as she was scared to go on her own. I had only ever been in a monogamous relationship, and had the short fling with my good friend – so I knew I had nothing to worry about. I agreed and off we went. We were thrilled when her result came back negative and shocked beyond belief that mine came back positive.
I can't find words to describe the thoughts, the emotions that ran through my mind, my heart and my soul. I was depressed and confused, broken into pieces that took me nearly ten years to pick up and put together again.
The first person I confided in was my best friend Victoria and she has supported me throughout my journey. I also told my last sex-partner (fling I had after my 3 year relationship), he also got tested, he tested positive. It's so strange how these things happen; if I hadn't gone with my colleague to be tested, I could have spent years without knowing. I think I was lucky to have found out about my

PATHETIC FACTS

Famous music stars died as a result of HIV/AIDS

Here are 50 famous musicians from the world died in HIV/AIDS:

Information Source: Third party

Tasia Evans

Tasia Evans told a mutual friend of her warts and herpes infections in confidence although has not reported this to her sexual partners. She has two kids and she doesn't know who her youngest father is. Adding insult to injury she also uses her child support money to purchase drugs, cigarettes, tattoos, and who knows what else. She reportedly is pregnant with a third child and the father is also a mystery. Avoid this disgusting excuse of a human at all costs otherwise you will get the gift that keeps on giving AND someone thatll leech the life and money from you for the next 18 years. Honestly her presence in anyone's life is worse than any STD around.

Former cop convicted of child sexual abuse material

FMR. BLYTHEVILLE POLICE OFFICER SENTENCED
36 MONTHS FOR CHILD SEXUAL ABUSE MATERIAL POSSESSION
DAVID CROSS
PLEADED GUILTY TO 19 COUNTS

By K8 Newsdesk

Published: Mar. 12, 2024 at 5:43 PM CDT | Updated: Jul. 25, 2024 at 10:20 PM CDT

MISSISSIPPI COUNTY, Ark. (KAIT) – A former Blytheville police officer will spend three years in prison for possession of child sexual abuse material. However, the prosecutor wanted him to serve much more.

Second Judicial Circuit Judge Scott Ellington sentenced 26-year-old David Paul Cross on Thursday to 36 months in the Arkansas Department of Corrections after pleading guilty to 19 counts of distributing, possessing, and/or viewing of materials depicting sexually explicit conduct involving a child.

According to court documents, Prosecuting Attorney Sonia Hagood had argued that Cross be sentenced to 57 years in the ADC.

"The offender knew or reasonably should have known that the victim was particularly vulnerable or incapable of resistance due to extreme youth," Hagood argued in the sentencing memorandum in support of upward departure. "The current offense was a sexual offense and was part of a pattern of criminal

Jonestown: Did Jim Jones have AIDS?

by Nico Bell

(This blogpost was originally published on 24 November 2019.)

Reading the history and records of Jonestown, something stands out in those last few months is the failing health of Temple leader Jim Jones. His long list of physical and mental illnesses can be attributed to his heavy drug use. But there's a few issues noted that lead me to wonder. Even as early as 1978, is it possible that Jim Jones had developed AIDS?

#OnThisDay in 1995, Richard "Rick" Frank - best known for his portrayal of Father Vogler in the 1984 movie Amadeus - died of AIDS-related illness.
Frank had numerous guest appearances on television shows, with a regular role on the sitcom Anything but Love. He also played infamous lawyer Roy Cohn in the first performance of Tony Kushner's play Angels in America.
By 1993, Frank had already gone public with his HIV+ status. In the wake of his public disclosure, Frank was asked to guest-star in the fourth season of Life Goes On. Frank played Chester, the hospital roommate of Jesse McKenna (Chad Lowe), while both were admitted for HIV-related illnesses.
Following his landmark appearance on Life Goes On, Frank's health began a gradual decline, but throughout 1994, he kept up his steady guest turns on series ranging from The Larry Sanders Show to Matlock.
By the beginning of 1995, in order to preserve his frail health, Frank made the decision to switch from acting to directing. An episode of Mad About You he directed was slated to be the first of many such jobs for the actor, but ultimately it became his final work.
Jamie Lee Curtis and Annie Guest reflect on Rick Frank, fallen friends and those still at risk: http://today.com/.../mother-daughter-fight-vs-aids...

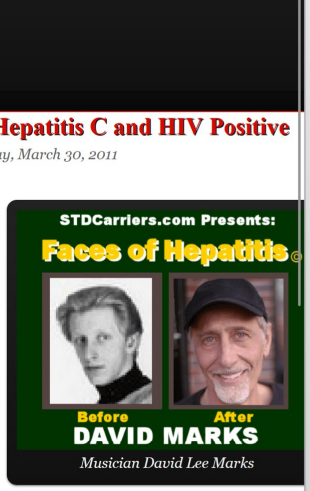
David Marks of The Beach Boys Has Hepatitis C and HIV Positive

Carrier No. 1271 Reported by STDCarriers.com on Wednesday, March 30, 2011

AVOID MISLEADING IMPRESSIONS! - CLICK HERE TO READ OUR LEGAL DISCLAIMER

First Name: David Lee
Last Name: Marks
Occupation: Musician
STD(s): Hepatitis C, HIV and AIDS
City: Los Angeles
State/Territory: California
Country: United States
Age: 62
Sexual Orientation: Straight
Race: White
Sex: Male
Hair: Gray
Eyes: Hazel
Height: 6 ft. 0 inches
Weight: 170 lbs.
Infection Date: Friday, December 31, 1999
Disclosure History: Has not failed to notify someone before exposure
Information Source: Published Source
More Information: Detailed News Story About David Marks and Hepatitis



Musician David Lee Marks

David Lee Marks is commonly thought of as the lost member of The Beach Boys because he left the band in 1963 before they released their most popular songs like "Wouldn't It Be Nice" and "I Get Around", but Marks can still be heard in "409 and ""Surfin Safari". Marks joined The Beach Boys in 1962 when he was just 13 years old and moved on to start his own band called David Marks and the Marksmen. Eventually Marks and The Beach Boys got back together in 2006 and the group is considering going on tour again for their 50th anniversary.

In 1999 David Marks was diagnosed with Hepatitis C by chance when being treated for a cracked rib and the doctor ran some tests to discover elevated liver enzymes. Marks began treatment right away with anti-viral drugs like Interferon, Ribavirin, and Pegalayted as well as herbal remedies. In 2004 Marks

Question

I have trouble understanding ayah#7 from Surat alisraa. Is it describing an event that will take place near the end of time or what And is this-what we're witnessing now-the second ifsaad? Also does the ayah mean that they will build a temple in place of al aqsa? Jazakum Allah kul khair ibtissam

Answer

All perfect praise be to Allaah, The Lord of the Worlds. I testify that there is none worthy of worship except Allaah, and that Muhammad ﷺ is His slave and Messenger.

Allaah Says (what means): {*[And said], "If you do good, you do good for yourselves; and if you do evil, [you do it] to them [i.e. yourselves]." Then when the final [i.e. second] promise came, [We sent your enemies] to sadden your faces and to enter the Masjid [i.e. the temple in Jerusalem], as they entered it the first time, and to destroy what they had taken over with [total] destruction.*}[Quran 17:7]

The above verse and other verses before it that are related to it include many matters which we will summarize in the following:

1- The children of Israel will cause corruption in the land twice, Allaah Says (what means): {*And We conveyed to the Children of Israel in the Scripture that, "You will surely cause corruption on the earth twice, and you will surely reach [a degree of] great haughtiness."*}[Quran 17:4] A degree of great haughtiness means pride, transgression, tyranny, arrogance, predominance and aggression. Indeed, this corruption had already taken place by them killing the Prophets, may Allaah exalt their mention

Actor battled AIDS, and stigma

Published Sept. 13, 1991 | Updated Oct. 13, 2005

Eight weeks ago, upon returning home from a Fourth of July weekend at the beach with his wife and daughter, actor Brad Davis pulled out a yellow legal pad and drafted a proposal for a book he never got the chance to write. "The purpose of this book is to reveal what it's like to be infected with HIV, to be receiving treatment, and having to remain anonymous at all costs _ chronicling how I have done this for over six years," Davis wrote.

"This may not be such a novel premise," the actor conceded. "Nobody wants to walk down the street with a sign saying "AIDS' pinned to his or her shirt."

Alan Davidson grew up a misfit in a small Texas town. It was the 1970s. When the counterculture was flourishing in the U.S., he felt like he'd finally found a group where he might fit in and be accepted for who he was: a gay young man.

Davidson soon found himself regularly shooting up methamphetamine, and his life was spinning out of control. He felt that the root of his problem was always that he was different, that his sexuality would never be accepted. Internally his mind vacillated between manic fervor and chronic fear.

The Fastest Man on Earth

Jun 29, 2022

Home / The Fastest Man On Earth

Glenn H. Curtiss and his aircraft are an essential part of aviation history. You may still be surprised to learn that at one time, Curtiss was the fastest man on earth ... on a motorcycle. Curtiss was an innovator with motorcycles before he ever touched an airplane; and before his time with motorcycles he made and raced bicycles. This is his story, from setting records on the ground, to setting them in the air, and making an indelible mark on aviation.

As a manufacturer and racer of motorcycles, it was only natural for Curtiss to wonder how fast a motorcycle would go with his powerful V-8 engine. He instructed his workers to construct a frame that could support the weight of the V-8. The motorcycle used direct drive, because a conventional chain-and-belt transmission could not withstand the power of the massive engine. Curtiss took the motorcycle to the Florida Speed Carnival at Ormond Beach in January 1907. He recorded a record-setting speed of 136 mph (218 km/h) during his run. It was there he was named "the fastest man on Earth."

This is Glenn Curtiss's motorcycle featuring the V-8 engine. Courtesy of the National Air and Space Museum, Smithsonian Institution.

2

Some call Curtiss the "father of naval aviation." He made the world's first practical flying boats and was a leading supplier to the U.S. and foreign navies. In 1910, Curtiss set up a winter encampment and taught flying to military personnel from the Army and Navy. The next year he flew his first seaplane and first amphibious aircraft, but perhaps more importantly sold the U.S. Navy their first aircraft—an A-1 Triad. That same year, one of the members of his team of aviators, Eugene Ely made the first ship-board landing on a special platform on the deck of the USS Pennsylvania, pointing the way to the possibility of an aircraft carrier. Eugene Ely made the first airplane take off from the deck of a ship, the USS Birmingham, on November 14, 1910. All of this paved the way for naval aviation.

Glenn H. Curtiss

1878 – 1930

Inventor who Advanced Military and Civilian use of Aircraft

Enshrined:: 1991

Glenn Curtiss is credited as being the "Father of Naval Aviation." A contemporary of the Wright brothers, Curtiss made significant advances in aircraft design. These advances shortened the time for public acceptance and use of powered aircraft; and consequently, created the aircraft industry. Included in his advances were the invention of aileron control surfaces (still used world-wide) for aircraft roll control, development of the first successful seaplane, and the World War I Jenny training plane.

Record company executive, producer, songwriter
For the Record…
Sources
Dubbed "The Greatest Rock and Roll Mogul in the World," Atlantic Records founder Ahmet Ertegun is clearly a fan at heart. Though exotic and debonair, with the elegance of royalty, this Renaissance man and member of New York City's high society is happiest in the company of Mississippi Delta bluesmen or partying with pals like Rolling Stone Mick Jagger or former Led Zeppelin frontman Robert Plant. Indeed, Ertegun can shake, rattle, and roll with the best of them.
Ahmet Munir Ertegun was born in Istanbul in 1923. He shared that birthday with the new Republic of Turkey, which had just emerged from 600 years as part of the Ottoman Empire. The Ergeuns were linked to this historical shift through Ahmet's father, Mehmet Munir Ertegun, who had been legal advisor to the opposition

The Top Musical Instrument Manufacturers May Surprise You, Or Maybe Not

The musical instrument business isn't that large when compared with medical or consumer electronics or most other global industries, but it's still pretty big. For instance, the total U.S. market for instruments and audio is only a little less than $7 billion, which amounts to a rounding error for **Apple**. That said, it's interesting to see who the big players are. You may not be surprised at the names on the list, but you might be with the ranking (thanks to **Music Trades** for the data).

1. **Yamaha** – $3.73 billion

2. **Gibson** – $1.37 billion

AMS

Yamaha musical instruments

Officially the world's largest musical manufacturing company, Yamaha musical instruments range from guitars and amps to keyboards, mixers, live sound, and beyond. If there's a piece of music equipment they don't make, you don't need it! Whether you're a beginner just starting out or a professional with decades of experience, there are plenty of Yamaha musical instruments to fit your budget and style.

Yamaha acoustic guitars

There's some serious manufacturing power behind Yamaha musical instruments, and it's not wasted on their acoustic guitars. Yamaha acoustic guitars merge incredible craftsmanship and affordability to provide quality instruments fit for musicians of any skill level or budget.

The Yamaha FG acoustic series features a comfortable design with solid spruce tops for improved sound and depth. They're the go-to for anyone looking for a straightforward, no-muss folk acoustic guitar. Oh, and did we mention you can get all this quality for under $400!? Yamaha FG acoustics are some of the most cost-effective guitars out there. They're perfect for beginners, and even intermediate and advanced players won't be able to argue with their tone and playability!

And when you're ready to hit the gig circuit, Yamaha acoustic/electric guitars come with built-in pickups and preamps to bring your amplified acoustic sound to any stage. Yamaha manufactures own in-house electronics, featuring undersaddle piezo pickup an in-body microphone. Use the blend switch on the side-mounted

The number of Israelis newly infected with AIDS/HIV in 2021 was 367, according to the Health Ministry, which released its statistics for World AIDS Day on Thursday. This is a 0.8% increase in the number compared to 2020.

The incidence rate here thus remained stable compared to 2020 and stands at 3.9 cases per 100,000 people in the population. This steady rate follows several years of declining new HIV cases. From 1981 until the end of 2021, some 11,139 cases of HIV carriers and AIDS patients were diagnosed in Israel. During this period, there were 1,746 deaths reported to the Health Ministry.

Ramon "Nomar" Enrique Perez Fernandez (born 9 January 1974) is a Venezuelan-born Spanish pornographic actor. He started his pornographic career around the age of 23, and he has worked with pornographic film producers Reality Kings, Brazzers and New Sensation.

Property	Value
dbo:abstract	• Ramon "Nomar" Enrique Perez Fernandez (born 9 January 1974) is a Venezuelan-born Spanish pornographic actor. He started his pornographic career around the age of 23, and he has worked with pornographic film producers Reality Kings, Brazzers and New Sensation. Nomar got his first break in hardcore with the Italian director Luca Damiano, who organized a casting at the Barcelona International Erotic Film Festival. Nomar eventually broke into both the European and U.S. industries. He is one of the most popular actors in the porn industry. He has stated in the past that he had always been in favor of well-scripted features as opposed to gonzo pornography, although he had no objections to appearing in films of either style. (en)

Who Is the Father of the PLC and Why Was It Invented?
Today you will learn the story of Richard "Dick" Morley, commonly referred to as the Father of the PLC.
FATHER OF THE PLC
Richard E. Dick Morley

Who Is The Father Of PLC?

Key Takeaway

Dick Morley is known as the father of PLC. He invented the first Programmable Logic Controller (PLC), the Modicon 084, in 1968 for General Motors. This invention revolutionized industrial automation by replacing complex relay-based control systems with a flexible, programmable solution. Morley's innovation allowed for easier control and reconfiguration of manufacturing processes, greatly improving efficiency and reliability. The Modicon 084 set the standard for PLCs, making Morley a pivotal figure in the development of modern industrial automation technology. His work laid the foundation for the widespread use of PLCs in various industries today.

Biography of the Inventor

Richard E. Morley, often referred to as the "Father of PLC," was a remarkable engineer and innovator. Born on December 1, 1932, in Clinton, Massachusetts, Morley's journey into the world of industrial automation began early in his career. With a passion for technology and problem-solving, he pursued a degree in physics and later ventured into engineering. His career was marked by a relentless drive to improve manufacturing processes and bring innovative solutions to the industry. Richard Morley's legacy is not just in the invention itself but also in his visionary approach to engineering and automation. He believed in making technology accessible and efficient, which has significantly shaped the

James Madison: Architect of American Democracy

Steven October 16, 2024 0 4 Mins

Introduction

James Madison, the fourth President of the United States, played a pivotal role in shaping the nation's political landscape. Known as the "Father of the Constitution," he was the primary author of the document that established the framework for American democracy. His contributions to the development and implementation of A democratic principles have left an enduring legacy

Dive into the remarkable legacy of James Madison, one of America's founding fathers and the visionary often called the "Architect of American Democracy."

In this video, we explore how Madison's keen intellect, political foresight, and steadfast commitment to freedom helped shape the foundational structures of the United States government.

Whether you are a history buff, a student of political science, or simply curious about the origins of American democracy, this video offers an in-depth look at James Madison's life and the

Tunnel diode

34 languages

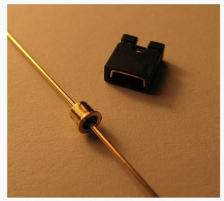
Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

A **tunnel diode** or **Esaki diode** is a type of semiconductor diode that has effectively "negative resistance" due to the quantum mechanical effect called tunneling. It was invented in August 1957 by Leo Esaki and Yuriko Kurose when working at Tokyo Tsushin Kogyo, now known as Sony.[1][2][3][4] In 1973, Esaki received the Nobel Prize in Physics for experimental demonstration of the electron tunneling effect in semiconductors.[5] Robert Noyce independently devised the idea of a tunnel diode while working for William Shockley, but was discouraged from pursuing it.[6] Tunnel diodes were first manufactured by Sony in 1957,[7] followed by General Electric and other companies from about 1960, and are still made in low volume today.[8]

Tunnel diodes have a heavily doped positive-to-negative (P-N) junction that is about 10 nm (100 Å) wide. The heavy doping results in a broken band gap, where conduction band electron states on the N-side are more or less aligned with valence band hole states on the P-side. They are usually made from germanium, but can also be made from gallium arsenide, gallium antimonide (GaSb) and silicon materials.

Tunnel diode



1N3716 tunnel diode (with 0.1" jumper for scale)

Component type	Active
Working principle	Quantum tunneling
Inventor	Leo Esaki Yuriko Kurose[1]

Satoshi Nakamoto Hypothetical depiction of Bitcoin developer Satoshi Nakamoto.

Satoshi Nakamoto is the presumed pseudonym used by the person (or persons) who helped develop the first Bitcoin software and introduced the concept of cryptocurrency to the general public via the paper “Bitcoin: A Peer-to-Peer Electronic Cash System” (2008). Nakamoto was the first to solve the problem of digital cryptocurrency being wrongly duplicated by creating the blockchain system of verification. Within the blockchain, timestamps are added to transaction information, and the data is then encrypted. This data now cannot be changed and must be validated. The network verifies the authenticity of created Bitcoins by using a consensus mechanism called “proof of work,” or “mining.” Bitcoin is the world’s largest cryptocurrency by market capitalization, being worth in 2024 about $1.4 trillion, even more than the global market in silver.

From Wikipedia, the free encyclopedia

In this name that follows East Slavic naming customs, the patronymic is Petrovich *and the family name is* Rozhestvensky.

Zinovy Petrovich Rozhestvensky[2] (Russian: Зиновий Петрович Рожественский, tr. *Zinoviy Petrovich Rozhestvenskiy*; November 11 [O.S. October 30] 1848 – January 14, 1909) was a Russian admiral of the Imperial Russian Navy. He was in command of the Second Pacific Squadron in the Battle of Tsushima, during the Russo-Japanese War.

Under Admiral Rozhestvensky's command, the Russian navy accomplished a feat of steaming an all-steel, coal-powered battleship fleet over 18,000 miles (29,000 km) one way to engage an enemy in decisive battle (the Battle of Tsushima, which ended in a disastrous defeat of the Russian force.) The *Knyaz Suvorov*, one of four brand-new battleships of the French-designed *Borodino* class, was his flagship for the voyage to the Pacific.

Besarion Jughashvili

21 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Besarion Ivanes dze Jughashvili[a] (c. 1850 – 25 August 1909) was the father of Joseph Stalin. Born into a peasant family of serfs in Didi Lilo in Georgia, he moved to Tbilisi at a young age to be a shoemaker, working in a factory. He was invited to set up his own shop in Gori, where he met and married Ekaterine Geladze, with whom he had three sons; only the youngest, Ioseb, lived. Once known as a "clever and proud" man, Jughashvili's shop failed and he developed a serious drinking problem, wherefore he left his family and moved back to Tbilisi in 1884, working in a factory again. He had little contact with either his wife or son after that point, and little is known of his life from then on, except that he died in 1909 of cirrhosis.

Abstract

A graduate-level text, *Semiconductor physics: Principles, theory and nanoscale* covers the central topics of the field, together with advanced topics related to the nanoscale and to quantum confinement, and integrates the understanding of important attributes that go beyond the conventional solid-state and statistical expositions. Topics include the behavior of electrons, phonons and photons; the energy and entropic foundations; bandstructures and their calculation; the behavior at surfaces and interfaces, including those of heterostructures and their heterojunctions; deep and shallow point perturbations; scattering and transport, including mesoscale behavior, using the evolution and dynamics of classical and quantum ensembles from a probabilistic viewpoint; energy transformations; light-matter interactions;

Asylum, and granted a pension. In February, 1802, he started a private school in the rue Sainte-Avoye. In September 1806, he moved to St. Petersburg, to found a school at the request of Alexander I of Russia.[3]

He returned to Paris, in 1817, to live with his brother, René Just Haüy, who is considered a founder of modern mineralogy.[3]

He is buried, with his brother René, in Père Lachaise Cemetery in Paris.

Grave of Valentin Haüy and René Just Haüy

Legacy [edit]

In 1889, Maurice de La Sizeranne created an association dedicated to helping the blind and visually impaired, named for him.

Abstract

L'abbé René-Just Haüy (1743–1822) indubitably is the father of modern mineralogy. Recognition of the unit cell (*la molécule intégrante*), the rationality of axial intercepts, the six primary forms (crystal systems), and the publication of his monumental *Traité de minéralogie* assure him of this status. In spite of being a cleric, Haüy avoided execution during the French revolution and even curried Emperor Napoléon's favor, writing treatises on physics and on geodesy under his tutelage. In 1816, Haüy sent a collection of 424 small but carefully identified specimens to the Québec Seminary. Astonishingly, after nearly two centuries, only four samples have been lost. The history of this unique collection and of a few ancillary objects is here documented.

Taniguchi, Norio

Edited by: David H. Guston

In: Encyclopedia of Nanoscience and Society

Chapter DOI: https://doi.org/10.4135/9781412972093.n434

Subject: Science, Technology & Society, Public Policy (general)

Born in 1912, Norio Taniguchi was a Japanese engineer and professor at Tokyo Science University who has been referred to as Japan's father of precision engineering and believed to have been the first to use the term *nanotechnology*. In a keynote paper titled, "On the Basic Concept of Nano-Technology" for the International Conference on Production Engineering in Tokyo in 1974, Taniguchi described nanotechnology as the technology to work with materials one nanometer in length.

Abstract

L'abbé René-Just Haüy (1743–1822) indubitably is the father of modern mineralogy. Recognition of the unit cell (*la molécule intégrante*), the rationality of axial intercepts, the six primary forms (crystal systems), and the publication of his monumental *Traité de minéralogie* assure him of this status. In spite of being a cleric, Haüy avoided execution during the French revolution and even curried Emperor Napoléon's favor, writing treatises on physics and on geodesy under his tutelage. In 1816, Haüy sent a collection of 424 small but carefully identified specimens to the Québec Seminary. Astonishingly, after nearly two centuries, only four samples have been lost. The history of this unique collection and of a few ancillary objects is here documented.

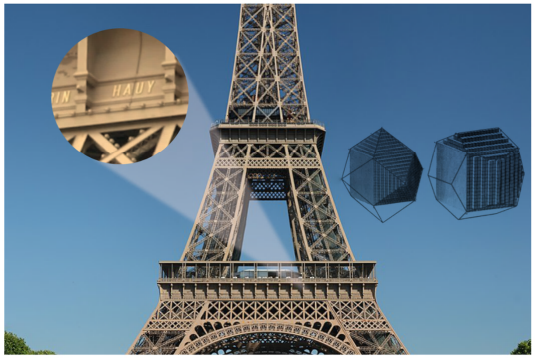
History of crystallography

René-Just Haüy and the birth of crystallography

Jean-Claude Boulliard, Delphine Cabaret and Paola Giura



In 1784, a small book entitled *Essai d'une Théorie sur la Structure des Crystaux* was published marking the beginning of modern crystallography. A crystallography that departs from being purely descriptive to using mathematics. A crystallography that predicts shapes and reveals molecules that would be debated for almost a century.

Its author, René-Just Haüy, a French abbot living in Paris, at almost 40 years old, began a scientific career focused on the study of crystals. His successes made him one of the greatest scientists of his time.

To mark the bicentenary of his death, this article presents the milestones of his unusual career in the troubled historic context of the end of the 18th century. The state-of-the-art knowledge of crystallography before Haüy is demonstrated. Then, Haüy's work is highlighted from the birth of a myth to that of a theory

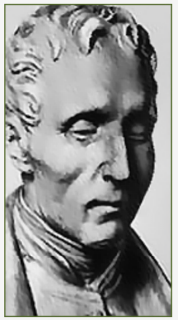
Valentin Hauy was born in 1745 and became a key figure in Paris during the 18th Century and early 19th Century and was a well-dressed, respectable middle-class man.

It was one afternoon in the year 1771 that would change the life of Valentin Hauy when he sat down to watch some entertainment in Paris.

There he saw blind people on the stage dressed in costumes that we would associate with a comedian and they scraped away at musical instruments that they could not play, whilst the audience shouted at them and made fun of them, but not Valentin as he felt sorry for these people on stage.



Although he never forgot about this so called entertainment at the expense of others, it was not until a few years later that Valentin came upon an idea of how to help the blind. It was after giving a young blind beggar some coins and watching him feel the raised markings on the coins that he thought about books being written that were with raised lettering, so that even they could become educated using their fingers rather than their eyes.

The young blind lad was called Francois Leseuer and Valentin Hauy took pity on him and decided to take him off the street and provide him with food and shelter and by making up wooden blocks with raised letters and numbers, he also taught Francois to read.

Through the success of teaching Francois to read, Valentin changed his life and put his resources into the education of blind children, so they would not have to suffer like Francois had once done, and he started to develop a way of being able to print books with raised lettering, so that blind people could learn to read with their fingers.

Then in 1784 he opened a school for the blind in Paris, which was in fact the first school of its kind throughout the world and Francois Leseuer became one of the teachers at the school.

International Relations

ICTP

The International Centre for Theoretical Physics (ICTP) in Trieste (Italy) was founded in 1964 by the late Prof. Abdus Salam. It operates under a tripartite Agreement between the Government of Italy, the United Nations Educational, Scientific and Cultural Organization (UNESCO) and the International Atomic Energy Agency (IAEA).

Collaboration between ICTP and CERN, particularly in support of physicists in Countries with developing particle physics background, notably in Africa, occurs in three main areas: enabling scientists from those Countries to participate in LHC experiments via scholarships, fellowships a nd associateships provided by the ICTP, co-organizing scientific conferences and schools, and opening access to scientific information.

Several ICTP awards have already been made for work on CERN physics projects, including to young scientists from Sri Lanka, Algeria and Palestine.

ICTP and CERN also collaborate in identifying young scientists from South America, Africa and Asia, to participate in CERN educational programs as well as in ICTP training courses.

Profile of Dr. Abdus Salam

Introduction

Professor Abdus Salam is a man of three worlds, the world of Islam, the world of Theoretical Physics, and the world of International Co-operation. He was awarded the Nobel Prize for Physics in 1979, for his theoretical unification of the two fundamental forces of nature. A year before his Nobel Prize, he was awarded the Royal Medal of the Royal Society of London. He is a Foreign Member of the National Academy of Sciences of USA and also of USSR, a rare 'double-first' which demonstrates his important position in the world of Sciences. His association with UN goes back to 1955, when he became Scientific Secretary to the Geneva Conference on the Peaceful Uses of Atomic Energy. He is very active in promoting scientific research in developing countries.

We are indeed privilged to have 'Bio-Data' of such a distinguished man. I therefore present to you: Professor Abdus Salam, Nobel Laureate, F.R.S; Professor of Theoretical Physics at the Imperial College of Sciences

ELECTRIC CAR

Why Did William Morrison Invent the Electric Car? Pioneering the Future

By Jennifer Haroon • March 14, 2025

The invention of the electric car is a significant milestone in the history of transportation, and it is often attributed to William Morrison, an American inventor and engineer. But why did Morrison invent the electric car? Was it just a curiosity or was there a deeper purpose behind his creation? In this article, we will explore the reasons behind Morrison's invention and the impact it had on the world.

The Early Days of Electric Vehicles

In the late 19th and early 20th centuries, electric vehicles were gaining popularity as a mode of transportation. They were quiet, clean, and easy to operate, making them an attractive alternative to horse-drawn carriages and early gasoline-powered cars.

IOWA HISTORY JOURNAL

An electrifying Iowan: William Morrison, pioneer of battery technology and automobiles

The winning car of the 1895 Chicago Times-Herald race, the Duryea Motorized Wagon, shown here on the occasion of the famous event. The Duryea car had a one-cylinder internal-combustion engine. Photographer unknown, Detroit Public Library Digital Collections

By Eric Bryan

Though Detroit is world-famous as the capital of American automobile production, when it comes to electric cars, Des Moines beat the Motor City to the punch. A Scottish immigrant who settled in Des Moines in 1880, William Morrison began as a chemist, but his main interest was in electricity, and specifically, batteries. Laboring in an obscure basement workshop below Lumbard Jewelry on Fifth Avenue between Locust Street and Grand Avenue, Morrison focused on the chemistry of electric storage batteries and sought to make a battery which was portable, yet powerful. By extension, Morrison's battery experiments led the inventor to create the first successful American electric car in 1890.

SHARE THIS ARTICLE

Iowa inventor William Morrison showcased America's first practical electric car at the 1893 Chicago World's Fair. Unlike crude electric carriages that came before, Morrison's surrey featured rechargeable batteries, rack-and-pinion steering and high-spoked wheels for traversing rutted roads. Morrison entered the car in a winter road race in 1895 and ran 13 of the 53 miles of the course in six inches of snow before running out of power. Soon after, commercial manufacturers scrambled to get in on the action. By 1900, a third of the nation's 4,000-plus cars were electric-powered.

Otis, Elisha Graves

(1811-1861)
Otis Elevator Co.

Overview

Elisha Graves Otis designed and built the first hoisting device that proved safe enough to carry people. A self-trained mechanic and constant tinker, he founded the company that still bears his name in 1853. His invention of the elevator has been called one of the most important breakthroughs of the nineteenth century, for it

Fig

139 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

For other uses, see Fig (disambiguation).

The **fig** is the edible fruit of ***Ficus carica***, a species of small shrub in the flowering plant family Moraceae, native to the Mediterranean region, together with western and southern Asia. It has been cultivated since ancient times and is now widely grown throughout the world.[3][4] *Ficus carica* is the type species of the genus *Ficus*, which comprises over 800 tropical and subtropical plant species.

A fig plant is a small deciduous tree or large shrub growing up to 7–10 m (23–33 ft) tall, with smooth white bark. Its large leaves have three to five deep lobes. Its fruit (referred to as syconium, a type of multiple fruit) is tear-shaped, 3–5 cm (1–2 in) long, with a green skin that may ripen toward purple or brown, and sweet soft reddish flesh containing numerous crunchy seeds. The milky sap of the green parts is an irritant to human skin. In the Northern Hemisphere, fresh figs are in season from late summer to early autumn. They tolerate moderate seasonal frost and can be grown even in hot-summer continental climates.

Figs can be eaten fresh or dried, or processed into jam, rolls, biscuits and other types of desserts. Since ripe fruit does not transport and keep well, most commercial production is in dried

WHO IS THE FATHER OF BOXING?

Answered by **Phillip Nicastro**

Well, let me tell you, the father of boxing is none other than James Figg, also known as James Fig. This dude was a total legend in the world of prizefighting and martial arts. He was born sometime before 1700, although the exact year is a bit hazy.

Now, let me give you a little background on this guy. James Figg was an Englishman, and he was not just any ordinary fighter. He was the real deal. He

From Wikipedia, the free encyclopedia

Omar Figueroa Jr. (born December 13, 1989) is an American former professional boxer who competed from 2008 to 2022. He held the WBC lightweight title in 2014.[2]

Amateur career [edit]

Figueroa had approximately 40 amateur bouts, mostly fought in Texas and Mexico, but quickly turned professional, admitting he "did not care for" the amateur ranks.[3]

Professional career [edit]

On January 6, 2012, Figueroa won an upset TKO over undefeated Puerto Rican-American prospect Michael Pérez in a bout televised on Showtime.[4] Figueroa would go on to win a total of six bouts in 2012, including his debut for Golden Boy Promotions, a second round knockout of Mexico's Ramon Ayala. Building on this success in 2013, Figueroa won a unanimous decision over Japan's Nihito Arakawa for the vacant WBC interim lightweight title, in a fight declared by the Showtime commentator Mauro Ranallo to be a candidate for 2013 Fight of the Year. Writer Scott Christ of the boxing blog Bad Left Hook later said of Figueroa and Arakawa's encounter:

> "This fight was unreal and has to be seen to be believed. The brutality was simply off the charts. They might not agree with it today, but I heard more than one person last night say that this was the best fight they've ever seen, or the best fight of the 2000s.[5]

The Soul of Muay Thai: The Significance of Wai Kru and Ram Muay

Muay Thai, Thailand's national sport that dates all the way back to the 13th century, is deeply steeped in tradition and cultural heritage. Known for its deadly elbows, knees, and crushing kicks, "the art of eight limbs" also has a more delicate side, embodied by the evocative Wai Kru.

As the sport has permeated the far corners of the globe and gained popularity and notoriety in recent years, practitioners are increasingly interested in learning about the rituals that accompany the martial art.

The Wai Kru, at its most fundamental level, is a homage paid to a fighter's foundations: the family, trainers, home, teachers, mentors, and gym – all those who have had an indelible impact on shaping the athlete as a person.

Birth and name [edit]

Ramkhamhaeng (sometimes written Ram Khamhaeng) was a son of Pho Khun Bang Klang Hao, who ruled as Pho Khun Si Inthrathit, and his queen, Sueang,[5] though folk legend claims his real parents were an ogress named Kangli and a fisherman.[6]:23 He had two brothers and two sisters. The eldest brother died while very young. The second, Ban Mueang, became king following their father's death and was succeeded by Ramkhamhaeng on his death.[7]

At age 19, he participated in his father's successful invasion of the city of Sukhothai, formerly a vassal of the Khmer, establishing the independent Sukhothai Kingdom. Due to his courage in the war, he allegedly was given the title "**Phra Ram Khamhaeng**" or "Rama the Bold".[3]:196 After his father's death, his brother Ban Mueang ruled the kingdom, assigning Ramkhamhaeng control of the city of Si Satchanalai.

The Royal Institute of Thailand speculates that Ramkhamhaeng's birth name was "Ram" (derived from Rama, the name of the hero of the Hindu epic Ramayana), as his name following his coronation was "Pho Khun Ramarat" (Thai: พ่อขุนรามราช). Furthermore, the tradition at the time was to give the name of a

(Redirected from Ram Khamhaeng)

For other uses, see Ramkhamhaeng (disambiguation).

Ramkhamhaeng (Thai: รามคำแหง, pronounced [rāːm kʰām hɛ̌ːŋ]) or commonly known as **Pho Khun Ramkhamhaeng Maharat** (Thai: พ่อขุนรามคำแหงมหาราช, pronounced [pʰɔ̂ː kʰǔn raːm kʰam hɛ̌ːŋ má hāː râːt]) was the third king of the Phra Ruang Dynasty, ruling the Sukhothai Kingdom (a historical kingdom of Thailand) from 1279 to 1298, during its most prosperous era.

He is credited for the creation of the Thai alphabet and the firm establishment of Theravada Buddhism as the state religion of the kingdom.[3]:197[4]:25

Wai Kru Ram Muay: The Muay Thai Dance

By Matthew Lucas • June 2, 2022

Muay Thai is steeped in tradition, culture, and honor. A prime example of this is the wai kru.

In Thailand, the wai ไหว้ is a form of greeting and respect. Kru,ครู, in Thai language, is teacher. Put together, the wai kru is a way to pay homage to the teacher.

KING RAMKHAMHAENG THE GREAT

One of the most important figures in Thai history, **King Ramkhamhaeng** (Rama the Bold) ruled the ancient Sukhothai kingdom from 1278-1298. Regarded as a benevolent and wise ruler, one of his major achievements was the compilation of a system of writing and a new Thai alphabet which he adapted from the various forms of Khmer script that were previously used. The alphabet King Ramkhamhaeng the Great devised in 1283 is essentially the same as that which is used today in Thailand and he is sometimes referred to as the **'Father of the Thai language'**. He has also been credited as the most important figure in establishing Theravada Buddhism in Thailand although the extent of his role is disputed by some historians.

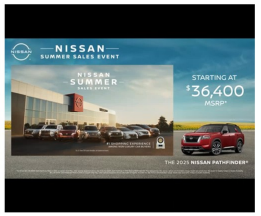
Britannica

Contents | Ask Our Chatbot a Question

Most that is known of Ramkhamhaeng comes from his great inscription of 1292, the earliest extant inscription in the Thai language, in a script devised by the king himself. It portrays him as a patriarchal ruler whose justice and liberality were available to all. He was an ardent and generous patron of Buddhism, a promoter of trade, and a friend to neighbouring rulers. Under Ramkhamhaeng, Sukhothai became the cradle of Siamese civilization. The arts developed distinctively Thai expressions, and Sukhothai bronze sculpture reached an especially high level. Ceramics, based on techniques borrowed from China, were produced at Sukhothai and Sawankhalok and became a major item of international trade.

Britannica Quiz
Kings and Emperors (Part III) Quiz

Ramkhamhaeng's kingdom was built upon the personal power and magnetism of an exceptional ruler, and when the king died, his distant vassals soon broke away. The region, however, was left with a vision of unity and a sense of cultural integrity upon which Sukhothai's successor states, especially Ayutthaya, were to build in following centuries.



Save for colourful local legends. Ramkhamhaeng was all but forgotten until 1834, when King [illegible] monk, rediscovered his 1292 ins[illegible] came to be regarded as a national hero in Thailand.

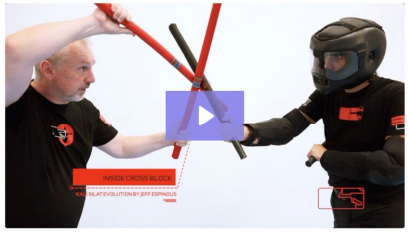
WHAT IS KALI SILAT

PANANTUKAN " DIRTY BOXING "

The Boxing component of Kali Silat Evolution is known as Panantukan. Often, it's referred to as "Dirty Boxing" due to the use of groin slaps, head butts, head manipulations, elbows, and limb destruction. Knees are also added to the mix and often aimed at the lower body while in Boxing Range.



DOUBLE STICKS " DOBLE BASTON "

Double Sticks or Sinawali. It's the Basic Foundation of the Filipino Martial Arts. From Basic coordination exercises to Fighting Applications.

SINGLE STICK " SOLO BASTON "

This is the primary weapon of the Filipino Martial Arts. Everything that we made with a stick can be translate to Empty Hand Application.

KNIFE " DAGA "

Most systems of Kali apply a single set of techniques for the stick, knife or empty hand combat and is referred to as "motion grouping." Unlike most martial arts, Kali starts training *with* weapons because it is believed that the weapon is an extension of the body. Therefore, through the same exercises, empty

中文網頁

HISTORY OF IAIDO (I) – THE BEGINNING OF IAIDO

To understand the history of Iaido and Musojikiden Eishi-Ryu, one needs to understand a fair portion of Japanese history as well as that of Japanese sword evolutionary history.
It is well accepted that the founder of Iaido was Hayashizaki Jinsuke Minamoto no Shigenobu (林崎甚助源重信) in the late Muromachi Era (室町時代). This was a very tumultuous period of Japanese history, plagued with constant wars and skirmishes. Fighting skills were developed both on and off the battlefields. Up to this period, there wasn't a unified concept or school of sword fighting techniques. Each region had their own training taught by head swordsmen of that region, and thus different styles emerged. Much of these were never recorded due to the constant chaos of that period. Most of these were only passed on orally, partly because of fear of other clans learning the secrets and devise methods to defeat the other. One may learn different styles of fighting technique and evolved into his own.

Hayashizaki was no exception. He studied under various teachers, most notably the legendary sword masters, Tsukahara Bokuden (塚原卜伝) and Higashine Gyoubu Daiyuu (東根刑部大夫). Hayashizaki's path in Bujutsu (武術) began with the desire to avenge his father's death.

Hyoho Niten Ichi Ryu

The Sword Style of Miyamoto Musashi

By Paul 'Batman' O'Brien

B.A., N.C.E.H.S., Dip. Acu., Adv. Dip. OBB, Cert Clin. Med. Pn1, PN-SSR, PN-NCA, M.AFPA, M.ETCMA, M.C.Th.A.

Hyoho Niten Ichi-ryu or more correctly Hyoho Niten Ichi-ryū (二天一流), can roughly be translated as "***the school of the strategy of two heavens as one***". It is classified as a koryū (ancient school) (to learn more about the differences between koryū and gendai arts such as Kendo, Karate etc please check out this article - What is Koryu).

The style, famous for its simultaneous used of two swords (the katana and wakizashi, known in the style as the daitō and shoto respectively), from which it derives its name, was conceived of and developed by **Miyamoto Musashi** (宮本 武蔵), a famous samurai, artist, poet and author. He is well known in the West

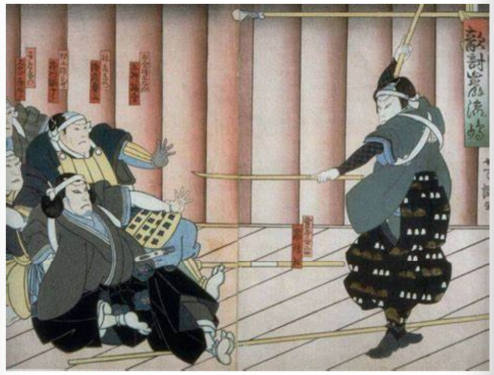
The Legacy of Miyamoto Musashi: Japan's Greatest Swordsman

Mack · 2 Months Ago · 0 · 12 Mins



Miyamoto Musashi is arguably the most famous swordsman in Japanese history, a figure whose **martial prowess**, **philosophical insights**, and **unconventional** lifestyle have cemented his legacy as a legendary warrior. Born in **1584**, Musashi's life spanned a period of great change in Japan, from the tumultuous **Warring States period** to the unification of the country under **Tokugawa Ieyasu**. His contributions to martial arts, literature, and philosophy continue to influence not only Japan but the wider world today.

Miyamoto Musashi: The Undefeated Swordsman

History / May 18, 2023

Miyamoto Musashi is perhaps the most famous swordsman in Japanese history. He is still revered as a master of martial arts. Musashi wrote "The Book of Five Rings," a classic text on kenjutsu, martial arts, strategy, and philosophy, which is still in print over 400 years later.

Born in 1584, Musashi showed a talent for sword fighting from a young age. He won his first duel at the age of 13. Over the years, Musashi fought in countless battles and at least 61 duels, developing a reputation as a skilled and ruthless warrior.

Unfortunately, one man's skill rarely determines the course of history. In 1600, he was on the losing side of the Battle of

HD Moore

Some people use cybersecurity tools, others build them. And then there's HD Moore, an innovator who didn't just break into cybersecurity, he changed the way we think about it. Before offensive security was a recognized career path,

The Morris II worm is a significant advancement in malware technology, capable of changing and evolving to adapt to new environments and threats. It utilizes adversarial self-replicating prompts to manipulate AI systems, leading to unauthorized actions and data theft. This type of malware poses a serious risk to the security of AI-powered applications and email assistants, as it can compromise sensitive data and spread malware across interconnected systems. Researchers have demonstrated the effectiveness of this worm in creating a chain of confidential user data extraction

Here Comes The AI Worm: Unleashing Zero-click Worms that Target GenAI-Powered Applications

Stav Cohen, Ron Bitton, Ben Nassi

View PDF

HTML (experimental)

In this paper, we show that when the communication between GenAI-powered applications relies on RAG-based inference, an attacker can initiate a computer worm-like chain reaction that we call Morris-II. This is done by crafting an adversarial self-replicating prompt that triggers a cascade of indirect prompt injections within the ecosystem and forces each affected application to perform malicious actions and compromise the RAG of additional applications. We evaluate the performance of the worm in creating a chain of confidential user data extraction within a GenAI ecosystem of GenAI-powered email assistants and analyze how the performance of the worm is affected by the size of the context, the adversarial self-replicating prompt used, the type and size of the embedding algorithm employed, and the number of hops in the propagation. Finally, we introduce the Virtual Donkey, a guardrail intended to detect and prevent the propagation of Morris-II with minimal latency, high accuracy, and a low false-positive rate. We evaluate the guardrail's performance and show that it yields a perfect true-positive rate of 1.0 with a false-positive rate of 0.015, and is robust against out-of-distribution worms, consisting of unseen jailbreaking commands, a different email dataset, and various worm usecases.

How Two Pakistani Brothers Created the First PC Virus

By Jason Kersten | Nov 2, 2013

Before vigilante hackers like Anonymous tamed the Internet, two brothers started their own fight against software piracy. Their weapon: the first PC virus.

In 1986, students at the University of Delaware began experiencing strange symptoms: temporary memory loss, a lethargic drive, and fits of rage. This wasn't just any old flu—it was the world's first personal computer virus. Known as Brain, the bug destroyed memory, slowed the hard drive, and hid a short copyright message in the boot sector, introducing the world to two soon-to-be hacker celebrities.

At the time, coders Basit and Amjad Farooq Alvi were just 17 and 24, respectively, running a computer store in Lahore, Pakistan. When they discovered that customers were circulating illegal

STEVEN--SEAGAL

Is Krav Maga a martial art or scam? Why not go ask the many military subreddits about the Krav Maga they learned?

I mean really, if it's the military hand to hand fighting system, why not use the power of the internet to ask actual military people what they actually learned in the actual military?

Like, oh this guy claims to teach (insert name of any country)'s military's hand to hand system! I'm signing up without asking anyone from the military anything about this.

I dunno maybe I'm crazy. I did try Krav twice, it was clearly some weird cardio fad, and I was in the military and what we were taught was bullocks. I certainly wouldn't pretend to be a combatives karate guru after what amounts to a few months of training recreational.

What do you lot think?

Two RV Locations Campers as low as

Spaniards encountered local Filipino martial arts during the colonial period (1521-1898). In the early years, Eskrima was well regarded by the Spaniards, but by 1596, it was banned as it was thought to be too dangerous. By 1764, the practice was entirely forbidden.

The Spanish attempted to destroy the Philippine culture by burning books and banning the use of the native alphabet, Baybayin. However, Filipinos found a way to keep their culture alive by incorporating Kali movements into the religious Moro-Moro dances and weaving Baybayin into artistic needlework.

The third form, Arnis, came about because of this attempt to keep Filipino culture alive. The Spaniards were impressed by the Kali-infused dances and skillful movement of the hands. They then named it “arnes” after their hand protection. Over time, the word evolved into “Arnis.”

What do you know about these Filipino martial arts? Have you practiced them?

Constitutional monarchy

107 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

"Ceremonial monarchy" redirects here. For other uses, see crowned republic.

Constitutional monarchy, also known as **limited monarchy**, **parliamentary monarchy** or **democratic monarchy**, is a form of monarchy in which the monarch exercises their authority in accordance with a constitution and is not alone in making decisions.[1][2][3] Constitutional monarchies differ from absolute monarchies (in which a monarch is the only decision-maker) in that they are bound to exercise powers and authorities within limits prescribed by an established legal framework. A constitutional monarch in a parliamentary democracy is a hereditary symbolic head of state (who may be an emperor, king or queen, prince or grand duke) who mainly performs representative and civic roles but does not exercise executive or policy-making power.[4]

SUMMARY

James Madison is generally regarded as the father of the United States Constitution. No other delegate was better prepared for the Federal Convention of 1787, and no one contributed more than Madison to shaping the ideas and contours of the document or to explaining its meaning.

KEY TAKEAWAYS

English

legislative body.[1]

History [edit]

Senate of the Roman Kingdom [edit]

The senate was a political institution in the ancient Roman Kingdom. The word *senate* derives from the Latin word *senex*, which means "old man"; the word thus means "assembly of elders". The prehistoric Indo-Europeans who settled Italy in the centuries before the founding of Rome in 753 BC[2] were structured into tribal communities,[3] and these communities often included an aristocratic board of tribal elders.[4]

The early Roman family was called a *gens* or "clan",[3] and each clan was an aggregation of families under a common living male patriarch, called a *pater* (the Latin word for "father").[5] When the early Roman *gentes* were aggregating to form a common community, the *patres* from the leading clans were selected[6] for the confederated board of elders that would become the Roman senate.[5] Over time, the *patres* came to recognize the need for a single leader, and so they elected a king (*rex*),[5] and vested in him their sovereign power.[7] When the king died, that sovereign power naturally reverted to the *patres*.[5]

The senate is said to have been created by Rome's first king, Romulus, initially consisting of 100 men. The descendants of those 100 men subsequently became the patrician class.[8] Rome's fifth king, Lucius Tarquinius Priscus, chose a further 100 senators. They were chosen from the minor leading families, and were accordingly called the *patres minorum gentium*.[9]

Rome's seventh and final king, Lucius Tarquinius Superbus, executed many of the leading men in the senate, and did not replace them, thereby diminishing their number. However, in 509 BC Rome's first and third consuls, Lucius Junius Brutus and Publius Valerius Publicola chose from amongst the leading equites new men for the senate, these being called *conscripti*, and thus increased the size of the senate to 300.[10]

The senate of the Roman Kingdom held three principal responsibilities: It functioned as the ultimate repository for the executive power,[11] it served as the king's council, and it functioned as a legislative body in concert with the people of Rome.[12] During the years of the monarchy, the senate's most important function was to elect new kings. While the king was nominally elected by the people, it was actually the senate who chose each new king.[11]

The period between the death of one king and the election of a new king was called the *interregnum*,[11] during which time the Interrex nominated a candidate to replace the king.[13] After the senate gave its initial approval to the nominee, he was then formally elected by the people,[14] and then received the senate's final approval.[13] At least one king, Servius Tullius, was elected by the senate alone, and not by the people.[15]

The senate's most significant task, outside regal elections, was to function as the king's council, and while the king could ignore any advice it offered, its growing prestige helped make the advice that it offered increasingly difficult to ignore. Only the king could make new laws, although he often involved both the senate and the curiate assembly (the popular assembly) in the process.[12]

HISTORY REPUBLIC

Romulus: The Founder of Rome

Origins and Development of the Roman Senate

The Roman Senate started as an advisory group and changed a lot as Rome's politics changed. Its influence shifted from a council of elders to a key institution shaping how Rome was run.

You'll notice how the Senate changed from monarchy, through the republic, and into the empire. It's a wild ride, honestly.

Founding in the Roman Kingdom

The Senate got its start during the Roman Kingdom, way back with Romulus, the first king. It was made up of **patres**, or fathers of noble families.

The word *senate* comes from the Latin s meaning "old man," which fits since it was a council

Ahmed Romel	
Born	July 8, 1989 (age 35)
Nationality	Jordanian
Occupation(s)	Trance music, Deep house producer
Years active	Since 2007
Known for	*Orchestrance*
Website	www.ahmedromel.com

Ahmed Romel (born July 8, 1989, in Dubai) is a Jordanian trance music and deep house producer known for his orchestral and oriental emotional trance music. He hosts the weekly radio show "Orchestrance"[1] and performs across the world including Tomorrowland, Luminosity Beach Festival, FSOE 400, 450 & 600, with his sold-out debut artist album RÜYA, released in August 2019.

Career [edit]

Ahmed Romel grew a passion for dance music since his young age. In 2007, he decided himself to trance with the main focus on euphoric and uplifting productions.[2][3]

Romulus, the founding father of Rome, made significant military contributions [1] [3] [4] [5]:

- He created the first Roman legions, which formed the basis of Roman military might [1] [2] [5].
- He introduced the concept of asylum, inviting fugitives to populate Rome and increase its size and diversity [4].
- He personally defeated and slayed the prince of Caenina in single combat, becoming the first to claim the spolia opima [1].

It was invented by Arab inventor named Hassan Al Rammah between 1270 and 1280, who worked in Syria after the Mongol destruction of Baghdad. He wrote a treatise on gunpowder and rockets called "The Book of Military Horsemanship and Ingenious War Devices". This book included more than 100 recipes for gunpowder, as 22 of them could be used as rocket fuel. Experts state that at least one of these recipes is extremely close to the modern ideal mix for gunpowder. Al Rammah also designed an early torpedo, probably the first of its kind.

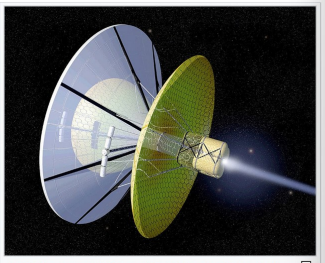
From Wikipedia, the free encyclopedia

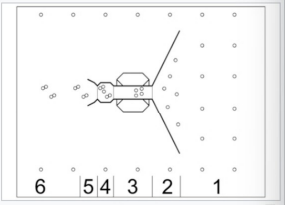
The **Bussard ramjet** is a theoretical method of spacecraft propulsion for interstellar travel. A fast moving spacecraft scoops up hydrogen from the interstellar medium using an enormous funnel-shaped magnetic field (ranging from kilometers to many thousands of kilometers in diameter); the hydrogen is compressed until thermonuclear fusion occurs, which provides thrust to counter the drag created by the funnel and energy to power the magnetic field. The Bussard ramjet can thus be seen as a ramjet variant of a fusion rocket.[*citation needed*]



Artist's conception of a Bussard ramjet. A major component of an actual ramjet – a miles-wide electromagnetic field – is invisible.

The Bussard ramjet was proposed in 1960 by the physicist Robert W. Bussard.[1]

The concept was popularized by Poul Anderson in his novel *Tau Zero*, Larry Niven in his *Known Space* series of books, Vernor Vinge in his *Zones of Thought* series, and Carl Sagan, as referenced in the television series and book *Cosmos*.[*citation needed*]



Bussard ramjet in motion.

1. Interstellar medium
2. Collect and compress hydrogen
3. Transport hydrogen beside the payload

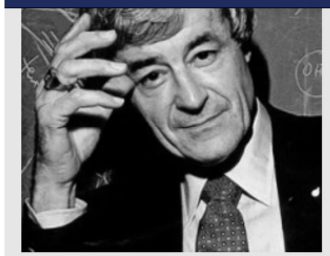
Nevada Aerospace Hall of Fame



Robert William Bussard

Robert William Bussard made pioneering efforts in NASA's Project Rover and Project NERVA, nuclear rocket projects, at Jackass Flats, Nevada from 1955 to 1972 to produce clean and cheap energy through nuclear fusion. He is the inventor of the Bussard ramjet and a design engineer of the FALCON project.

Biography

Robert William Bussard was born on August 11, 1928 in Washington, D.C. His father, Moral, was a civil engineer from France with his own design firm. His mother, Elsa, was an architect from Germany. In 1933, they moved to Panama, where Bussard learned Spanish. The Bussards moved to Los Angeles, California in 1935, where he, at the age of seven, decided to be a designer of space rockets. He received his Bachelor's degree in Engineering in 1950 and Master's in Engineering in 1952, both from the University of California, Los Angeles. Bussard served in the U.S. Air Force Reserve from 1951 to 1960, obtaining the rank of First Lieutenant. In 1961, he earned his Ph.D. in Physics from Princeton University with his dissertation on plasma stability.

In 1960, Bussard conceived the Bussard Ramjet, an interstellar space drive powered by hydrogen fusion. The Bussard Ramjet uses hydrogen collected with a magnetic field from the interstellar gas. It was popularized by Poul Anderson's

SEIKO ORIGINS: THE STORY OF THE FIRST-EVER SMART WATCH

19/11/2021

Seiko is a household name in the watch industry and has made significant contributions to it. Founder Kintaro Hattori opened his first clock repair shop in Tokyo in 1881.

For over 130 years, Seiko has always strived for excellence in its craft and pushed the boundaries of watch technology. The turning point for the company was when it released the Seiko T001 in 1983. Because of this feat, the T001 was dubbed “The Mother Of All Smart Watches.”

In this article, we’ll get to know more about the watch that paved the way for the modern smartwatch. Read on below to learn more.

More about the Seiko T001

The ’80s was a time when Seiko was thriving and releasing watches that were ahead of their time. The Seiko T001 was one of them, and it’s credited as the predecessor of the modern smartwatch for one simple reason: it had a TV in it. Obviously, having a wearable TV the size of a watch was a massive deal at the time. Until now, the T001 is still fondly remembered by watch and technology enthusiasts.

Virtual Reality Pioneer: Tom Furness

In November 2015, Tom Furness, considered the grandfather of virtual reality, sat down with the team at Voices of the VR Podcast for an in depth interview called "#245: 50 years of VR with Tom Furness: The Super Cockpit, Virtual Retinal Display, HIT Lab, & Virtual World Society." It's still worth a listen and read.

Tom Furness has been thinking about virtual reality longer than most VR users have been alive. He built some of the first helmet-mounted displays for the US Air Force, and what would become the Super Cockpit. Leaving the military, he helped found the Human Interface Technology Lab at the University of Washington in Seattle, and created the non-profit, educational association, the Virtual World Society.

About Me

Naeem Ali

Toronto, Canada

The contributions of the Islamic civilization are vast and I'm amazed at how little people are aware of this. I once heard a hypothetical question posed "How different would the world of today be if Islam never existed?" Many answered there would be peace, there would be no terrorism or no extremism. As if that is the only contribution Muslims ever made. My answer: "The modern world would not exist as it does today. The world would still be stuck in the dark ages." I blog about Islamic history from its birth in the 6th century right up to the end of the 19th century. To be sure you don't miss my new posts, subscribe via email. Just sign up above

Academician Basov, high-power lasers, and the antimissile defense problem

Peter V. Zarubin

Author Affiliations +

Optical Engineering, Vol. 52, Issue 2, 021002 (October 2012). https://doi.org/10.1117/1.OE.52.2.021002

Abstract

A review of the extensive program of the pioneering research and development of high-power lasers and laser radar undertaken in the USSR during the years 1964 to 1978 under the scientific supervision of N.G. Basov is presented. In the course of this program, many high-energy lasers with unique properties were created, new big research and design teams were formed, and the laser production and testing facilities were extended and developed. The program was fulfilled at many leading research institutions and design bureaus of the USSR Academy of Sciences and defense industry.

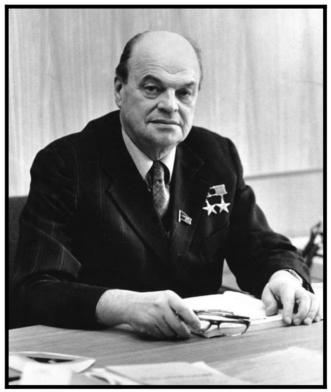
Quantum Electronics **31** (8) 751–752 (2001) ©2001 Kvantovaya Elektronika and Turpion Ltd

OBITUARY

PACS numbers: 01.60.+q
DOI: 10.1070/QE2001v031n08ABEH002039

In Memory of Nikolai Gennadievich Basov



Nikolai Gennadievich Basov, a leading light of Russian and world science, died on 1 July 2001. He was one of the founders of quantum electronics which ranks among the great achievements of the 20th century, together with atomic energy, space exploration, semiconductor technology, and computers.

In 1952 Nikolai Basov and Aleksandr Prokhorov were the first to demonstrate, on the basis of theoretical analysis, the feasibility of constructing amplifiers and generators of electromagnetic fields based on induced radiation by quantum systems in an inverse-population state. In 1955 these two scientists proposed an effective method for generating an inverse population by selective pumping of a three-level system – a method which is now widely used in lasers and quantum amplifiers. The same period saw the construction of fundamentally new devices – quantum oscillators (masers) and low-noise radio-frequency amplifiers. In 1959 Basov and Prokhorov were awarded the Lenin Prize for discovering this new principle of generation and amplification of electromagnetic radiation by quantum systems, and in 1964 they were awarded, jointly with Charles Townes, the Nobel Prize for physics for fundamental studies in the field of quantum electronics which have led to the creation of

After developing in 1956 the first quantum-electronic devices – masers – and successfully applying them to frequency standards, Basov came up with an initiative of constructing quantum light generators – lasers. For the first time ever the use was suggested of semiconductors as active media, with various excitation methods, including injection across the p–n junction (1961). This method led to the creation of injection (diode) lasers, now most widespread and extensively used in science and technology, the annual world production of which now amounts to several hundred million.

In the 1960s Basov carried out a wide range of investigations of laser frequency standards. To a large extent thanks to the work of Basov and his students the precision of measurement of the frequencies and wavelengths of atomic and molecular transitions was increased by several orders of magnitude. Laser standards of time and frequency were created in the Department of Quantum Radiophysics of the Physics Institute of the Academy of Sciences [FIAN, more widely known as the Lebedev Physics Institute] which had unrivalled parameters, and which are now being introduced into the State time-keeping service.

Basov was always a true patriot, never separating his interests in developing science and using its achievements from the interests of the State. He was the initiator of the first and many subsequent decrees of the Government of the USSR on the development of quantum electronics in our country. In the early 1960s, together with his team, he identified and solved various scientific and technical problems related to practical applications of lasers, including those designed to improve the defence capacity of our country.

Regarding the problem of creating a powerful laser as the most important one for quantum electronics, Basov started in 1962, and subsequently headed, a wide range of investigations which led to the creation of a broad family of new powerful photodissociation, excimer, electron-beam-controlled, and chemical lasers.

The most important in this family of powerful high-energy lasers developed under the leadership of Basov are iodine photodissociation lasers in which a shock wave is used for the excitation of the active medium. The scientific basis of such lasers was worked out at the Lebedev Physics Institute, and they were jointly produced by teams from the Lebedev Physics Institute and the All-Union Scientific Research Institute for Experimental Physics. Already in 1968 our country had explosion-type iodine photodissociation lasers capable of generating megajoule pulses.

With the object of maximising laser energy concentration Basov initiated studies aimed at increasing the brightness of laser beams by frequency conversion and coherent integration through stimulated light scattering – Raman

y Basov: The Father of Quantum Electronics and Nobel Laureate

Share on Facebook Share on X Share on LinkedIn
Share on WhatsApp

1922 – Nikolay Basov, Russian physicist and academic, Nobel Prize laureate (d. 2001)

Full Name: Nikolay Gennadievich Basov
Birth Year: 1922
Death Year: 2001
Nationality: Russian
Profession: Physicist and academic
Nobel Prize: Laureate in Physics
Field of Study: Quantum electronics

Nikolay Basov emerged into a world grappling with the aftermath of war and revolution in 1922, a time when the foundations of modern physics were being challenged and reshaped. Born in the small village of Kresty near Moscow, he was destined for greatness in a land that was both his cradle and crucible. His early years were steeped in hardship; growing up during a period marked by political upheaval and societal shifts, Basov's intellect shone brightly even amid chaos.

LINDAU NOBEL LAUREATE MEETINGS

The achievements of Basov helped create the field of quantum electronics which remains a current and important field of intense study. The results can be seen at super market cash registers, in highly precise time keeping, scientific laboratory equipment and surgery as well as providing the basis for further Nobel Prize winning work. Basov remained active in the maser/laser field, continuing to contribute to its steadily increasing number of active media and, thus, types of available light amplification. For example, he was the first to produce a laser working in the ultraviolet region as well as making other advances in population inversion in semiconductors.

In 1958 Basov became the deputy director at the Lebedev Institute and in 1973 its director. Here he worked in several fields, including optoelectronics on logic elements based on diode lasers and on the stability and power output of gas lasers. During this time he was the recipient of the Lenin Prize (together with Prokhorov) and became a member of the Academy of Sciences of the USSR and of the GDR. He was also an active member of the Communist party beginning in 1951.

In 1950 Basov married Kseniya Tikhonovna Nazarova with whom he had two sons. He died on July 1, 2001 at the age of 78 in Moscow, Russia.

Coordinates: 21.4212°N 39.8726°E
The Stoning of the Devil (Arabic: رمي الجمرات ramy al-jamarāt, lit. "throwing of the jamarāt [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called jamarāt, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.
A Stoning of the Devil from 1942
On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.
Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.
Replacement of the pillars [edit]
Until 2004, the three jamarāt (singular: jamrah) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the jamarāt, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.
The jamarāt are named (starting from the east):[5]
• the first jamrah (al-jamrah al-'ūlā), or the smallest jamrah (الجمرة الصغرى al-jamrah aṣ-ṣughrā),
• the middle jamrah (الجمرة الوسطى al-jamrah al-wusṭā),
• the largest jamrah (الجمرة الكبرى al-jamrah al-kubrā), or Jamrah of Aqaba (جمرة العقبة jamrat al-ʿaqaba).

For other uses, see Mecca (disambiguation).
Mecca (/ˈmɛkə/; officially Makkah al-Mukarramah,[a] commonly shortened to Makkah[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the Hajj pilgrimage, observed in the twelfth Hijri month of Dhū-l-Ḥijjah.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]
Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the Jabal al-Nur ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the Hajj is an obligation upon all able Muslims. The Great Mosque of Mecca, known as the Masjid al-Haram, is home to the Ka'bah, believed by Muslims to have been built by Abraham and Ishmael. It is Islam's holiest site and the direction of prayer (qibla) for all Muslims worldwide.[12]
Muslim rulers from in and around the region long tried to take the city and keep it in their control, and thus, much like most of the Hejaz region, the city has seen several regime changes. The city was most recently conquered in the Saudi conquest of Hejaz by Ibn Saud and his allies in 1925. Since then, Mecca has seen a tremendous expansion in size and infrastructure, with newer, modern buildings such as the Abraj Al Bait, the world's fourth-tallest building and third-largest by floor area,[13] towering over the Great Mosque. The Saudi government has also carried out the destruction of several historical structures and archaeological sites,[14] such as the Ajyad Fortress.[15][16][17] However,

Stoning of the Devil

28 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Coordinates: 21.4212°N 39.8726°E

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

The *jamarāt* are named (starting from the east):[5]

- the first *jamrah* (*al-jamrah al-ʾūlā*), or the smallest *jamrah* (الجمرة الصغرى *al-jamrah aṣ-ṣughrā*),
- the middle *jamrah* (الجمرة الوسطى *al-jamrah al-wusṭā*),
- the largest *jamrah* (الجمرة الكبرى *al-jamrah al-kubrā*), or Jamrah of Aqaba (جمرة العقبة *jamrat al-ʿaqaba*).

This article is about the food processing company. For other uses, see Ghandour.
Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.
A manufacturer of confectioneries like hard-boiled candies,[2] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]
Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

JUSTUS-LIEBIG-UNIVERSITÄT GIESSEN
Rudolf Buchheim Institute of Pharmacology
About Us
Research
History
In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Seltersberg, where he started doing researches in an experimental way as the leadoff pharmacologist.
Rudolf Buchheim
Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.
Contribution to the festschrift 'The medical faculty of the university Giessen'
Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

9. Historical Tidbits
9.6. Cauchy, Augustin (1789-1857)
Augustin Cauchy was the mathematician that set the foundation of rigor in modern analysis. A product of the revolutions in France during the eighteenth and nineteenth centuries, he provided the revolutionary ideas that set this branch of mathematics on its present course. He is also known as being one of the most prolific writers in the history of the science.
Augustin Louis Cauchy was born in Paris, France, on August 21, 1789, only a month after the storming of the Bastille. His father, a government official and staunch

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years

By Peter High, Contributor.

Follow Author

Oct 13, 2014, 10:57am EDT

This article is more than 10 years old.

This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.

First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.

He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-Lee said. "We have to build systems that allow for privacy. People have

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

Bin Laden claims responsibility for 9/11
CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004
Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.
INDEPTH: Remembering September 11
The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

Article Talk | Read View source View history Tools

From Wikipedia, the free encyclopedia

This article is about the spokesman for Hamas' military wing. For other uses, see Abu Ubaidah (disambiguation).

Abu Ubaida (Arabic: أبو عبيدة, romanized: *Abū ʿUbayda;* born February 11, 1985; also spelled **Abu Obaida**, **Abu Ubayda** and **Abu Ubaydah**), whose alleged real name is **Hudayfa Samir Abdallah al-Kahlout** (Arabic: حذيفة سمير عبدالله الكحلوت), is a Palestinian militant who has been the spokesperson for the Ezzedeen al-Qassam Brigades, the military wing of Islamic Resistance Movement, since at least 2007.

Abu Ubaida	
Native name	أبو عبيدة
Birth name	Hudayfa Samir Abdallah al-Kahlout (alleged by the United States)
Born	February 11, 1985 (age 40) Gaza City, Israeli-occupied Gaza Strip
Allegiance	Islamic Resistance Movement
Service / branch	Izz ad-Din al-Qassam Brigades
Years of service	2002–present
Rank	Spokesperson
Battles / wars	Second Intifada 2014 Gaza War Gaza war

Biography

According to Israeli media and the U.S. government, Abu Ubaida is Hudayfa Samir Abdallah al-Kahlout, born 11 February 1985, in Gaza.[1][2][3] Abu Ubaida first emerged in 2002, representing the Qassam Brigades to the media and at press conferences. After the Israeli disengagement from Gaza in 2005, he was officially appointed the spokesman for Al-Qassam.[4]

According to the United States, Abu Ubaida has been the spokesman of the Qassam Brigades since at least 2007.[2] He only appears wearing a keffiyeh covering his face.[1]

In 2014, Israeli media outlets released a photo, allegedly of Abu Ubaida. However, the validity of the photo and name were denied by the al-Qassam Brigades.[1]

In April 2024, United States Department of Treasury issued sanctions against Abu Ubaida and re-asserted his identity as al-Kahlout.[2][3]

Doctor killed near Gaza hospital, Israeli forces in S Lebanon

Palestinians have said the bombing in the north is "getting worse every day" for the estimated 65,000 people living there.

MENA 15 min read

The New Arab Staff | 29 November, 2024

A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.

Dr Ahmed Ziad Al-Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.

Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

Name

Halima Abdul Kareem Al-Kahlout

Age

28 years old

Martyr Date

October 29, 2023

The martyr Halima Abdul Kareem Al-Kahlout, 28 years old.

Halima was a Palestinian artist known for her strong presence in art exhibitions. She earned an artistic title in arts from Al-Aqsa University and was recognized for her unique perspective on life reflected in her artwork.

Halima worked as an art facilitator with the Palestinian Ministry of Culture and collaborated with various art centers.

Her untimely death prevented her from completing paintings depicting life difficulties in Gaza under siege. Her loss left a significant void, and she is deeply missed by those who knew her and appreciated her artistic contributions.

On 29/10/2023 , she was martyred along with family members due to Israeli rocket shrapnel hitting Gaza city.

The Archimedes' screw, also known as the Archimedean screw, hydrodynamic screw, water screw or Egyptian screw,[1] is one of the earliest documented hydraulic machines. It was so-named after the Greek mathematician Archimedes who first described it around 234 BC, although the device had been developed in Egypt earlier in the century.[2] It is a reversible hydraulic machine that can be operated both as a pump or a power generator.
As a machine used for lifting water from a low-lying body of water into

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

Andersen Global Announces Expanded Presence in Saudi Arabia
Alrikaz becomes a collaborating firm of Andersen Global
Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.
Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.
Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.
"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

Andersen Global Announces Expanded Presence in Saudi Arabia
Alrikaz becomes a collaborating firm of Andersen Global
Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.
Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.
Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.
"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

From Wikipedia, the free encyclopedia
Berth Milton Sr. (26 November 1926 – 31 December 2005) was a Swedish pornographer and businessman. He is known for his creation of Private, the first full-color hardcore pornographic magazine, in 1965. Later, he went on to build one of the most renowned brand names in modern pornography. He was the father of Berth Milton Jr., the current majority owner and former CEO of Private Media Group, the company that now publishes the magazine and other properties under the Private brand.

where are the children used by Jens and Peter Theander [edit]
They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.
This company [edit]
This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

NITRO CIRCUS
The Lasting Legacy of Travis Pastrana
Tyler Tate/T Squared Media House
by Tyler Tate
Jan 06, 2025 • 1:41 pm
0
Amid the year-end holiday hustle, Nitro Circus undertook an extraordinary feat—a bold 29-city U.S. tour in just over a month. The sheer logistics of such a high-energy tour cannot be overstated. It's a testament to the professionalism of the performers, the dedication of the crew, and the enduring legacy of Travis Pastrana. Pastrana, a name synonymous with fearlessness and innovation, has not only pushed the boundaries of what's possible in action sports but also created an arena for dreamers and doers to showcase their brilliance. His life's work, Nitro Circus, has become a cultural phenomenon—a

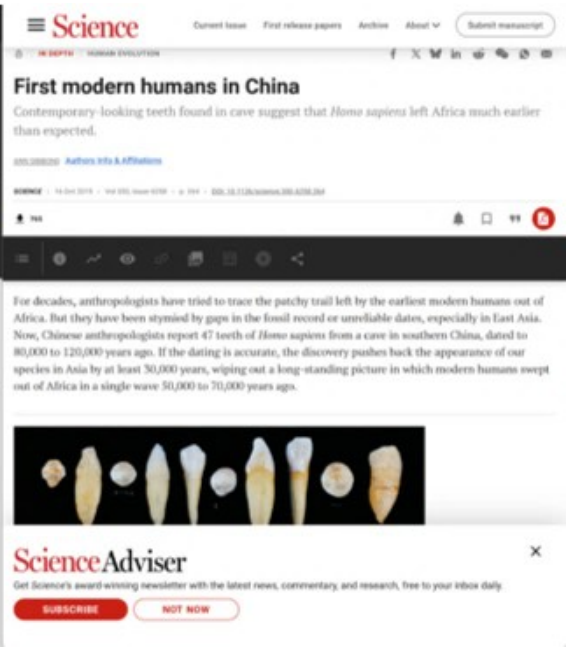
Abstract
The hominin record from southern Asia for the early Late Pleistocene epoch is scarce. Well-dated and well-preserved fossils older than ~45,000 years that can be unequivocally attributed to Homo sapiens are lacking[1,2,3,4]. Here we present evidence from the newly excavated Fuyan Cave in Daoxian (southern China). This site has provided 47 human teeth dated to more than 80,000 years old, and with an inferred maximum age of 120,000 years. The morphological and metric assessment of this sample supports its unequivocal assignment to H. sapiens. The Daoxian sample is more derived than any other anatomically modern humans, resembling

Science
Trove of teeth from cave represents oldest modern humans in China
Find suggests Homo sapiens migrated out of Africa earlier than expected
These fossil teeth may have belonged to the first Homo Sapiens in China.
For decades, anthropologists have tried to trace the patchy trail left by the earliest modern humans out of Africa. But they have been stymied by gaps in the fossil record or unreliable dates, especially in East Asia. Now, Chinese anthropologists report 47 teeth of Homo sapiens from a cave in southern China, dated to 80,000 to 120,000 years ago. If the dating is accurate, the discovery pushes back the appearance of our species in Asia by at least 30,000 years, wiping out a long-standing picture in which modern humans swept out of Africa in a single wave 50,000 to



Science
First modern humans in China
Contemporary-looking teeth found in cave suggest that Homo sapiens left Africa much earlier than expected.
For decades, anthropologists have tried to trace the patchy trail left by the earliest modern humans out of Africa. But they have been stymied by gaps in the fossil record or unreliable dates, especially in East Asia. Now, Chinese anthropologists report 47 teeth of Homo sapiens from a cave in southern China, dated to 80,000 to 120,000 years ago. If the dating is accurate, the discovery pushes back the appearance of our species in Asia by at least 30,000 years, wiping out a long-standing picture in which modern humans swept out of Africa in a single wave 50,000 to 70,000 years ago.

Asım Orhan Barut

10 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Asım Orhan Barut[1]

Born	6 June 1926 Malatya, Turkey
Died	5 December 1994 (aged 68) Boulder, Colorado
Nationality	Turkish, American
Alma mater	Eidgenössische Technische Hochschule Zürich, Switzerland
Known for	Electrodynamics and classical theory of particles and fields, quantum field theory, elementary particles and group theory, Barut–Girardello coherent states
	Scientific career
Fields	High energy physics, quantum electrodynamics, and relativity

MAX BORN: THE REMARKABLE LIFE OF THE QUANTUM PIONEER

Nick | February 13, 2024

PHYSICISTS BIOGRAPHIES

Max Born was a towering figure in the world of physics, whose work helped shape our understanding of quantum mechanics, the theory that explains the behavior of matter and energy at the smallest scales. Born, a German-British physicist and mathematician, made significant contributions to several areas of science, including solid-state physics and optics. His influence extended beyond his own research through his role as a teacher and mentor to a generation of physicists who would go on to push the frontiers of the field even further.

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Jamal Ahmad Hamza Khashoggi (/kəˈʃʊgdʒi, kəˈʃɒgdʒi/; Arabic: جمال أحمد حمزة خاشقجي, romanized: *Jamāl ʾAḥmad Ḥamza Ḵāšuqjiyy*, Hejazi Arabic pronunciation: [dʒaˈmaːl xaˈʃuɡ(d)ʒi]; Modern Turkish: **Cemal Ahmed Kaşıkçı**; 13 October 1958 – 2 October 2018) was a Saudi journalist, dissident, author, columnist for *Middle East Eye* and *The Washington Post*, and a general manager and editor-in-chief of Al-Arab News Channel who was assassinated at the Saudi consulate in Istanbul on 2 October 2018 by agents of the Saudi government at the behest of Crown Prince Mohammed bin Salman.[8][9][10][11]

Khashoggi served as editor for the Saudi Arabian newspaper *Al Watan*, turning it into a platform for Saudi progressives.[12] Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter",[13] and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman.[14] He also opposed the Saudi Arabian-led intervention in Yemen.[15]

On 2 October 2018, Khashoggi

Jeff Bezos phone hacking incident

1 language

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman.[1][2] The Saudi Arabian embassy to the United States has denied the allegations.[3] Billionaire Jeff Bezos, the owner of *The Washington Post* newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the *National Enquirer* reported details of Bezos's affair in January 2019.[4] FTI Consulting did not link the *National Enquirer* to the hack.[4] In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.[5]

Jeff Bezos in 2017

Background [edit]

Starting in September 2017, *The Washington Post*, which is owned by Bezos, published a series of columns by Jamal Khashoggi that were critical of Saudi Arabia or bin Salman.[6] In

Saudi-led airstrikes on Yemen

4 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Not to be confused with US-led airstrike campaign in Yemen.

A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes[1] in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm[2] (Arabic: عملية عاصفة الحزم, romanized: *Amaliyyat ʿĀṣifat al-Ḥazm*). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015.[3] Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF).[4] Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.[5]

Many other civilians targets,[6] including schools,[7] and school buses[8] in Yemen are also bombed by the Saudi-led coalition.[9][10][11][12][13][14]

According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.[15]

The UN accused the Saudi-led coalition of "complete disregard for human life".[16]

Timeline [edit]

October 2015 - Saada airstrike [edit]

Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015[17] had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.[18]

survivors search rubble for valuables, Sana'a, Yemen, Oct. 9, 2015.

Dr. Michael DeBakey, Father of Cardiac Surgery, Dies at 99
July 12, 2008 -- Considered the father of cardiac surgery, and by many the world's greatest surgeon, Michael E. DeBakey passed away on Friday night in Houston, just two months shy of his 100th birthday. Born in 1908 in Lake Charles, Louisiana to Lebanese-Christian immigrants, DeBakey invented numerous surgical procedures and techniques, as well as a host of devices that revolutionized vascular and cardiac surgery.

Israel has become increasingly involved in the world transplantation industry in the last decade. This comes a few years after India, which until the 1990s was the global center of the organ trade, enacted legislation prohibiting transplants using organs acquired from living people.

On the internet, the offer looks very serious: a start to a new life without dialysis, with a new kidney in just a few weeks. A glimmer of hope for seriously ill people who have been waiting for years for a donor organ. Behind it all is a notorious network of international organ traffickers.
We have been following the trail for months. At the center is a transplant

Salman Khan of Khan Academy

I have had the a good fortune of speaking with good number of the leaders in education technology today. Since so many of these players have emerged from academe, the competition between companies is fierce certainly, but there is also a collegial willingness to acknowledge the successes of other companies. In the case of non-profits like edX, CEO Anant Agarawal says, the more companies that enter this space, the merrier. (Stay tuned for my interview with Agarwal on January 20th.) Several of these leaders acknowledge that the most influential person to the MOOC landscape has been Salman Khan. As Agarwal lists the genesis of the MOOCs, he lists Khan and his Khan Academy first among the major players. Sebastian Thrun acknowledged **in my interview with him** that "I stumbled into this after listening to a gentleman named Sal Khan of Khan Academy. In his speech he noted that he had tens of millions of students in his classes. I was teaching at Stanford at the time and had tens of dozens of students in my classes, and I felt I should try something different and see if we could do what I do and scale it to many people." In fact, **in my podcast interview with Thrun**, as he listed those who had been most influential to him over the course of his career, he listed Khan on the short list.

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of **khanacademy.org** is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

From Wikipedia, the free encyclopedia Checked

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of *Time* 100.[4] In the same year, he was featured on the cover of *Forbes*, with the tagline "The $1 Trillion Opportunity."[5]

Early life and family [edit]

Khan was born in Metairie, Louisiana, on October 11, 1976, into a Bengali Muslim family.[6] His father Fakhrul Amin Khan (d. 1990) was a physician,[7][8] originally hailing from the village of Rahmatpur in Babuganj Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India.[6][9] He grew up in a state of

From Wikipedia, the free encyclopedia
Yoji Ito (伊藤 庸二, Itō Yōji, 5 March 1901[1]–9 May 1955[2]) was an engineer and scientist who had a major role in the Japanese development of magnetrons and the Radio Range Finder (RRF – the code name for a radar).
Early years [edit]
Yoji Ito was born and raised in Onjuku, then a fishing village in the Chiba Prefecture of Japan. His father was the primary schoolmaster and encouraged his children to achieve science and mathematics excellence. After graduating in electrical engineering from the Tokyo Imperial University, Ito was commissioned in the Imperial Navy and spent several years in assignments at sea.[3]
At the NTRI [edit]
Still in the Navy, Yoji Ito was sent to Germany for graduate study where he was a student of Heinrich Barkhausen at the Dresden Technische Hochschule. Upon completing his Doctor of Engineering degree there in 1929, he was promoted to the rank of Commander and assigned as a researcher at the Naval Technology Research Institute (NTRI) in the Meguro area of Tokyo. The NTRI had been formed in 1922, and was just becoming fully operational when Ito was sent there. Here first-rate scientists, engineers, and technicians were engaged in a wide variety of activities for advancing naval capabilities.[3]
At NTRI, Ito became involved with analyzing long-distance radio communications, and wanted to investigate the

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain. If the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

From Wikipedia, the free encyclopedia
Not to be confused with American producer DJ Khalil, Algerian musician Khaled (musician) or American R&B singer Khalid (American singer).
Khaled Mohammed Khaled (/ kəˈliːd/; born November 26, 1975),[1] known professionally as DJ Khaled, is an American DJ and record producer. Originally a Miami-based radio personality, Khaled has since become known for enlisting high-profile music industry artists to perform on singles and albums, for which he often serves as producer and hype man. Known as the "Anthem King", his distinctions are his booming voice presence, "motivational" abstractions, maximalist production style and numerous catchphrases.[2]
Khaled was born in New Orleans, Louisiana, to Palestinian immigrant parents. He first gained recognition as a radio host in the 1990s for the radio station 99 Jamz, and translated his popularity by working with Fat Joe's hip hop collective, Terror Squad, as a DJ for their live performances and as a producer for the group. Following his production credits on the group's material,[3] Khaled enlisted several hip hop artists associated with the group and his native Miami to perform on his debut studio album, Listennn... the Album (2006). His second album, We the Best (2007), spawned the hit single "I'm So Hood" (featuring T-Pain, Trick Daddy, Rick Ross and Plies). His two subsequent releases—We Global (2008) and Victory (2010)—both peaked within the top ten of the Billboard 200, the latter was supported by the single "All I Do Is Win" (featuring T-Pain, Ludacris, Snoop Dogg and Rick Ross), which received triple platinum certification by the Recording Industry Association of America (RIAA).

impacts of its products.

Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Phillip Morris made were in 1854.

On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.

The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Abu Obaida (Al-Qassam)

24 languages

From Wikipedia, the free encyclopedia

This article is about the spokesman for Hamas' military wing. For other uses, see Abu Ubaidah (disambiguation).

Abu Ubaida (Arabic: أبو عبيدة, romanized: *Abū ʿUbayda;* born February 11, 1985; also spelled **Abu Obaida**, **Abu Ubayda** and **Abu Ubaydah**), whose alleged real name is **Hudayfa Samir Abdallah al-Kahlout** (Arabic: حذيفة سمير عبدالله الكحلوت), is a Palestinian militant who has been the spokesperson for the Ezzedeen al-Qassam Brigades, the military wing of Islamic Resistance Movement, since at least 2007.

Abu Ubaida	
Native name	أبو عبيدة
Birth name	Hudayfa Samir Abdallah al-Kahlout (alleged by the United States)
Born	February 11, 1985 (age 40) Gaza City, Israeli-occupied Gaza Strip
Allegiance	Islamic Resistance Movement
Service / branch	Izz ad-Din al-Qassam Brigades
Years of service	2002–present
Rank	Spokesperson
Battles / wars	Second Intifada 2014 Gaza War Gaza war

Biography

According to Israeli media and the U.S. government, Abu Ubaida is Hudayfa Samir Abdallah al-Kahlout, born 11 February 1985, in Gaza.[1][2][3] Abu Ubaida first emerged in 2002, representing the Qassam Brigades to the media and at press conferences. After the Israeli disengagement from Gaza in 2005, he was officially appointed the spokesman for Al-Qassam.[4]

According to the United States, Abu Ubaida has been the spokesman of the Qassam Brigades since at least 2007.[2] He only appears wearing a keffiyeh covering his face.[1]

In 2014, Israeli media outlets released a photo, allegedly of Abu Ubaida. However, the validity of the photo and name were denied by the al-Qassam Brigades.[1]

In April 2024, United States Department of Treasury issued sanctions against Abu Ubaida and re-asserted his identity as al-Kahlout.[2][3]

Zwarte Piet
"Black Peter" redirects here. For other uses, see Black Peter (disambiguation).
Not to be confused with Piet Zwart.
Zwarte Piet (Dutch:
known in English by the translated name Black Pete, is the companion of Saint Nicholas
in the folklore of the Low Countries.
Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.
The depiction of Zwarte Piet has gone through several changes since the mid 19th century. The earliest known illustration of the character comes from an 1850 book by Amsterdam schoolteacher Jan Schenkman and portrays him as a black Moor. This became the dominant representation of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character, since deemed a racial stereotype, usually put on blackface and colourful Renaissance attire in addition to curly wigs and bright red lipstick.
This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed. Alternatives later debuted, among them multicolored Piets. By 2021 a revised version, dubbed Sooty Piet (Dutch: Roetveegpiet), had become more common than the traditional variant at public events and in television specials, films, social media, and advertising. Sooty Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

Guide to Jewish Genetic Diseases
By Xvetler Staff
Below are the 19 Ashkenazic Jewish genetic diseases for which people are most commonly screened. It is estimated that 1 in 5 Ashkenazic Jews is a carrier of a mutation in at least one of these disease genes:
Bloom Syndrome
Canavan Disease
Cystic Fibrosis
Familial Dysautonomia
Fanconi Anemia Type C
Gaucher Disease
Glycogen Storage Disease, Type 1a
Maple Syrup Urine Disease
Mucolipidosis IV (ML-IV)
Niemann-Pick Disease Type A
Tay-Sachs Disease
Walker-Warburg Syndrome
Screening is also available for the following diseases on a more limited basis:
Dihydrolipoamide Dehydrogenase Deficiency (DLD Deficiency)
Familial Hyperinsulinism
Joubert Syndrome
Nemaline Myopathy
Spinal Muscular Atrophy

Andersen Global Announces Expanded Presence in Saudi Arabia

Alrikaz becomes a collaborating firm of Andersen Global

Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.

Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.

Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.

"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

From Wikipedia, the free encyclopedia

Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born **Benjamin Carl Goldstein**;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.

Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL), a militant Jewish organization founded by his

Trove of teeth from cave represents oldest modern humans in China

Find suggests Homo sapiens migrated out of Africa earlier than expected

For decades, anthropologists have tried to trace the patchy trail left by the earliest modern humans out of Africa. But they have been stymied by gaps in the fossil record or unreliable dates, especially in East Asia. Now, Chinese anthropologists report 47 teeth of *Homo sapiens* from a cave in southern China, dated to 80,000 to 120,000 years ago. If the dating is accurate, the discovery pushes back the appearance of our species in Asia by at least 30,000 years, wiping out a long-standing picture in which modern humans swept out of Africa in a single wave 50,000 to

Abstract

The hominin record from southern Asia for the early Late Pleistocene epoch is scarce. Well-dated and well-preserved fossils older than ~45,000 years that can be unequivocally attributed to *Homo sapiens* are lacking[1,2,3,4]. Here we present evidence from the newly excavated Fuyan Cave in Daoxian (southern China). This site has provided 47 human teeth dated to more than 80,000 years old, and with an inferred maximum age of 120,000 years. The morphological and metric assessment of this sample supports its unequivocal assignment to *H. sapiens*. The Daoxian sample is more derived than any other anatomically modern humans, resembling

Asım Orhan Barut

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1925 – December 5, 1994) was a Turkish-American theoretical physicist.[1]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[1]

Asım Orhan Barut[1]

Born	6 June 1925 Malatya, Turkey
Died	5 December 1994 (aged 68) Boulder, Colorado
Nationality	Turkish, American
Alma mater	Eidgenössische Technische Hochschule Zürich, Switzerland
Known for	Electrodynamics and classical theory of particles and fields, quantum field theory, elementary particles and group theory, Barut–Girardello coherent states
Scientific career	
Fields	High energy physics, quantum electrodynamics, and relativity

Pandrasus
Pandrasus
Pandrasus was a Greek King.
In 769 BC, the Latin exile Brutus arrived in Pandrasus' territory and staged a slave revolt of 400 Trojan slaves. While the freed slaves fought Pandrasus' men, Brutus took the king hostage and demanded that he and the slaves be given ships and supplies to escape the region. Pandrasus, capitulating to Brutus' demands, gave one of his daughters, Innogen as a wife, as a sign of good faith.
After his daughter was wed with Brutus, the Latin exile left the Greek territory with Innogen and the freed Trojans.

little theorem and laws of refraction, and many more.

Early Years

Pierre de Fermat was born in a wealthy family in Beaumont-de-Lomagne, France. His father, Dominique Fermat, was a wheat, cattle, and leather merchant and he also held the position of one of the four consuls of Beaumont-de-Lomagne. Pierre had three siblings, one brother and two sisters. He spent his childhood in the city of his birth.

There is little evidence about his schooling, but it was probably at College de Navarre in Montauban where he received much of his education. Pierre studied at the University of Orleans from 1623 and earned a bachelor's in civil law in 1626. After his graduation, Pierre moved to Bordeaux.

Mathematician

Specialty	Mathematics & Law
Born	1601 Beaumont-de-Lomagne, France
Died	Jan. 12, 1665 Castres, France
Nationality	French

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

Work in Mathematics

In 1630, Pierre bought a counsellor's office at Parlement de Toulouse and was sworn in by Grand Chambre in 1631. Pierre worked at this high court for the rest of his life. He rose through the ranks at the criminal court, reaching up to the highest post in 1652. Pierre was fluent in multiple languages, including French, Latin, Greek, Occitan, Spanish and Italian. Pierre shared his work with his friends and fellow mathematicians through letters. However, he would often not provide proof for his theorems. This allowed Pierre to retain the tag of amateur while he could still gain recognition he wanted.

Pierre had a close encounter with death in the early 1650s when a plague gripped the town of Beaumont-de-Lomagne. Many people died in that plague and even Pierre was badly impacted. In fact, in 1653, he was wrongly reported as dead when he was suffering from plague. However, Pierre survived that phase and went on to continue his duties at the court. Pierre died in 1665 in Castres, Tarn.

Contributions to Mathematics

Fermat is considered one of the greatest French mathematicians of the 17th Century. He made contributions to every field of mathematics that existed during his era. He explored the mathematical areas, including analytical geometry, infinite descent, and pre-evolved calculus. He considered mathematics to be a hobby, which is why he never published his work.

Fermat's greatest ideas are in the area of number theory, which is the purest form of mathematics involving the study of whole numbers and the relationships between them. Fermat became particularly famous for his Fermat's Last Theorem. According to this theorem, x to the power n + y to the power n = z to the power n has a no non-zero integer solutions for the values of x, y and z, and n is greater than 2. This theorem has puzzled mathematicians for years until recently.

He also contributed to the development of calculus through his work on the properties of curves. He relied on geometric and physical intuition to find the areas bounded by these curves through a summation process. This process is now called integral calculus. He is also regarded by some mathematicians as the inventor of differential calculus.

Along with Blaise Pascal, Fermat is also known as the co-founder of probability theory. An exchange of letters between the two mathematicians developed a general formulation of probability theory. Probability theory is the mathematics of gambling, risk, and change. The theory provides the

This article is about the food processing company. For other uses, see Ghandour.

Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.

A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]

Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

Author
Windsor, Rudolph R. 1935-
Smithsonian Libraries African Art Index Project DSI
The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.
The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Sceaux (near Paris), France

Summary
Augustin-Louis Cauchy pioneered the study of analysis, both real and complex, and the theory of permutation groups. He also researched in convergence and divergence of infinite series, differential equations, determinants, probability and mathematical physics.

Augustin-Louis Cauchy
Augustin-Louis Cauchy
Early Life
Augustin-Louis Cauchy was a French mathematician born on 21st August 1789 in Paris, France. He laid the foundation for modern day analysis and did many significant works in the field of mathematics. His early schooling was from 'École Centrale du Panthéon' which was considered to be one of the best schools in Paris at the time. Cauchy was a brilliant student attaining high grades in all subjects including Latin and Humanities. Cauchy enrolled in the École Polytechnique to become an engineer and finished his studies at the institute in 1807. After Polytechnique he went to 'École des Ponts et Chaussées' (School for Bridges and Roads) to do civil engineering. Augustin-Louis Cauchy

Mitsuyo Maeda

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Mitsuyo Maeda (前田 光世, *Maeda Mitsuyo*, November 18, 1878 – November 28, 1941) naturalized as **Otávio Maeda** (Portuguese pronunciation: [o tavju ma ede]),[1] was a Japanese-born *judōka* and prizefighter in no holds barred competitions. He was known as **Count Combat** or ***Conde Koma*** in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]

Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]

Biography [edit]

Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]

HOME NEWS MUAYBORAN IMBA MUAYSTYLES BLOG 3PILLARS TECHNIQUE

Let's take a closer look at some of the best known Muay Boran techniques coming from Phra Ram's warrior skills.

Phra Ram's techniques.

I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.

a. *Phra Ram Yaeb Longka. Lord Rama breaks into Lanka.* This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.

b. *Phra Ram Ti Tab. Lord Rama attacks the (enemy) army.* In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.

c. *Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army.* This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.

From Wikipedia, the free encyclopedia

Satoru Sayama (佐山 聡, *Sayama Satoru*) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names **Sammy Lee**, and masked **Super Tiger**, **Tiger King**, **Tiger Mask** and **The Mask of Tiger**. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]

He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate,

Satoru Sayama

Muhammad Hussain Inoki[3] (born **Kanji Inoki** (猪木寛至, *Inoki Kanji*) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name **Antonio Inoki**. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.

Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.

In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.[4][5][6]

August 17, 2017 – 4.47pm

'I've been waiting for this moment for so long, it's overwhelming,' says a tearful Bronwyn Atherton as she arrives at Sydney Airport.

The 32-year-old from Ulladulla on the NSW South Coast who greets her family and friends with joy and laughter looks like she's just returned from a gap year in Europe.

Arizona man gets 30 years in prison for child porn of Norfolk victim

Prosecutors said 28-year-old Ethan Roberts first met the victim online in January of 2022. At the time, she was 14 years old.

NORFOLK, Va. – An Arizona man on Wednesday was sentenced to 30 years in prison for producing child pornography involving a minor from Norfolk.

According to the U.S. Attorney's Office for the Eastern District of Virginia, 28 year-old Ethan Roberts first met the victim online in January of 2022. At the time, she was 14 years old.

N.J. man charged with possessing child pornography after tip from nonprofit group

By Matthew Enuco | NJ Advance Media for NJ.com

An Ocean County man was charged with possessing child pornography after an investigation based on a tip from the National Center for Missing and Exploited Children, according to the county prosecutor's office.

Dennis Hubert, 42, of Brick Township was arrested Thursday at his home after a court-authorized search turned up several items of child pornography, authorities said.

Animation showing how Archimedes screws can generate power if they are driven by flowing fluid
The Archimedes' screw, also known as the Archimedean screw, hydrodynamic screw, water screw or Egyptian screw,[1] is one of the earliest documented hydraulic machines. It was so-named after the Greek mathematician Archimedes who first described it around 234 BC, although the device had been developed in Egypt earlier in the century.[2] It is a reversible hydraulic machine that can be operated both as a pump or a power generator.

"Black Peter" redirects here. For other uses, see Black Peter (disambiguation).
Not to be confused with Piet Zwart.
Zwarte Piet (Dutch: [ˈzʋɑrtə ˈpit]; Luxembourgish: Schwaarze Péiter; West Frisian: Swarte Pyt; Indonesian: Pit Hitam), also known in English by the translated name Black Pete, is the companion of Saint Nicholas (Dutch: Sinterklaas; French: Saint-Nicolas; West Frisian: Sinteklaas; Luxembourgish: Kleeschen) in the folklore of the Low Countries. Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.[1][2]
The depiction of Zwarte Piet has gone through several changes since the mid 19th century. The earliest known illustration of the character comes from an 1850 book by Amsterdam schoolteacher Jan Schenkman and portrays him as a black Moor. This became the dominant representation of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character, since deemed a racial stereotype, usually put on blackface and colourful Renaissance attire in addition to curly wigs and bright red lipstick.[3]
This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed.[2] Alternatives later debuted, among them multicolored Piets. By 2021 a revised version, dubbed Sooty Piet (Dutch: Roetveegpiet), had become more common than the traditional variant at public events and in television specials, films, social media, and advertising.[4] Sooty Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

By Robert Mackey
Sept. 1, 2015
Not much of what happened last Friday during a demonstration near the West Bank village of Nabi Saleh is in doubt. But in thousands of social media arguments since then, Israelis and Palestinians, and supporters of the two sides around the world, have interpreted one charged encounter in very different ways.
After a protest against Israel's military occupation became an exchange of tear gas and stones, an Israeli soldier tried to arrest a 12-year-old Palestinian boy, one arm in a sling, accused of hurling rocks.
An Israeli soldier briefly detained a 12-year-old Palestinian boy at a protest near the West Bank village of Nabi Saleh on Friday. Mohamad Torokman/Reuters
The soldier was quickly set upon by five female protesters, as at

DRONE STUDIO NE
Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

From Wikipedia, the free encyclopedia

Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born **Benjamin Carl Goldstein**;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.

Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL), a militant Jewish organization founded by his

NITRO CIRCUS
The Lasting Legacy of Travis Pastrana
Tyler Tate/T Squared Media House
by Tyler Tate
Jan 06, 2025 • 1:41 pm
0
Amid the year-end holiday hustle, Nitro Circus undertook an extraordinary feat—a bold 29-city U.S. tour in just over a month. The sheer logistics of such a high-energy tour cannot be overstated. It's a testament to the professionalism of the performers, the dedication of the crew, and the enduring legacy of Travis Pastrana. Pastrana, a name synonymous with fearlessness and innovation, has not only pushed the boundaries of what's possible in action sports but also created an arena for dreamers and doers to showcase their brilliance. His life's work, Nitro Circus, has become a cultural phenomenon—a

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

Jamal Ahmad Hamza Khashoggi (/kəˈʃʊgdʒi, kəˈʃɒgdʒi/; Arabic: جمال أحمد حمزة خاشقجي, romanized: *Jamāl ʾAḥmad Ḥamza Ḵāšuqjiyy*, Hejazi Arabic pronunciation: [dʒa mˈaːl xaˈʃuɡ(d)ʒi]; Modern Turkish: **Cemal Ahmed Kaşıkçı**; 13 October 1958 – 2 October 2018) was a Saudi journalist, dissident, author, columnist for *Middle East Eye* and *The Washington Post*, and a general manager and editor-in-chief of Al-Arab News Channel who was assassinated at the Saudi consulate in Istanbul on 2 October 2018 by agents of the Saudi government at the behest of Crown Prince Mohammed bin Salman.[8][9][10][11]

Khashoggi served as editor for the Saudi Arabian newspaper *Al Watan*, turning it into a platform for Saudi progressives.[12] Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter",[13] and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman.[14] He also opposed the Saudi Arabian-led intervention in Yemen.[15]

On 2 October 2018, Khashoggi

Jeff Bezos phone hacking incident

1 language

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman.[1][2] The Saudi Arabian embassy to the United States has denied the allegations.[3] Billionaire Jeff Bezos, the owner of *The Washington Post* newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the *National Enquirer* reported details of Bezos's affair in January 2019.[4] FTI Consulting did not link the *National Enquirer* to the hack.[4] In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.[5]

Background [edit]

Starting in September 2017, *The Washington Post*, which is owned by Bezos, published a series of columns by Jamal Khashoggi that were critical of Saudi Arabia or bin Salman.[6] In

Saudi-led airstrikes on Yemen

4 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Not to be confused with US-led airstrike campaign in Yemen.

A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes[1] in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm[2] (Arabic: عملية عاصفة الحزم, romanized: *Amaliyyat ʿĀṣifat al-Ḥazm*). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015.[3] Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF).[4] Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.[5]

Many other civilians targets,[6] including schools,[7] and school buses[8] in Yemen are also bombed by the Saudi-led coalition.[9][10][11][12][13][14]

According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.[15]

The UN accused the Saudi-led coalition of "complete disregard for human life".[16]

Timeline [edit]

October 2015 - Saada airstrike [edit]

Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015[17] had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.[18]

Carl Friedrich Gauss
Carl Friedrich Gauss
7 August 2023 / 9 February 2025 by Charlton C
Carl Friedrich Gauss (1777-1855), the Father of Arithmetic Progression, was a German child genius who went on to become one of the greatest mathematicians of all time, and thanks to him we can now easily find the sum of an arithmetic sequence.
Daniel C, Aarav S
His life
Carl Friedrich Gauss was born in 1777 in the city of Brunswick into a lower class family. His father would work many different jobs just to make ends meet, and his mother was illiterate. However, this didn't stop him from becoming a renowned mathematician, astronomer and

CARL FRIEDRICH GAUSS – The Prince of Mathematics
Biography
Johann Carl Friedrich Gauss is sometimes referred to as the "Prince of Mathematicians" and the "greatest mathematician since antiquity". He has had a remarkable influence in many fields of mathematics and science and is ranked as one of history's most influential mathematicians.
Gauss was a child prodigy. There are many anecdotes concerning his precocity as a child, and he made his first ground-breaking mathematical discoveries while still a teenager.
At just three years old, he corrected an error in his father payroll calculations, and he was looking after his father's accounts on a regular basis by the age of 5. At the age of 7, he is reported to have amazed his teachers by summing the integers from 1 to 100 almost instantly (having quickly spotted that the sum was actually 50 pairs of numbers, with each pair summing to 101, total 5,050). By the age of 12, he was already attending gymnasium and criticizing Euclid's geometry.
Although his family was poor and working class, Gauss' intellectual abilities attracted the attention of the Duke of Brunswick, who sent him to the Collegium Carolinum at 15, and then to the prestigious University of Göttingen (which he attended from 1795 to 1798). It was as a teenager attending university that Gauss discovered (or independently

Father of Graph Theory – Know Leonhard Euler's Contributions, Basic Graph Theory & Facts here!
Download As PDF
Overview
Test Series
Father of Graph Theory – Leonhard Euler, an 18th-century Swiss mathematician, physicist and astronomer, is recognized as the Father of Graph Theory. Born on April 15, 1707, in Basel, Switzerland, Euler made groundbreaking contributions that revolutionized the field of Mathematics. Euler's most notable contribution came in the form of graph theory, a branch of mathematics concerned with the study of relationships between objects. In 1736, Euler tackled the famous problem known as the Seven Bridges of Königsberg, where he introduced the concept of a graph and developed the fundamental theorem of graph theory. His solution to the problem laid the foundation for the field and established him as the pioneer of graph theory.
Father of Graph Theory

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 | Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Basic Operations in Boolean Algebra

"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."

- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer

George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.

The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jeremy Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.

Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.

The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Demystifying the Genius of George Boole: Father of the Information Age

by Natalie Smith | February 9, 2025 | 8 min read |
Tech stuff & gadgets

George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

Most Drug Trafficking Is From Ethiopia, Tanzania And Brazil

Smithsonian
The original Black Jews
Smithsonian Libraries and Archives
Object Details
Author
Windsor, Rudolph R. 1935-
Smithsonian Libraries African Art Index Project DSI
The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.
The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Augustin-Louis Cauchy
Augustin-Louis Cauchy
Early Life
Augustin-Louis Cauchy was a French mathematician born on 21st August 1789 in Paris, France. He laid the foundation for modern day analysis and did many significant works in the field of mathematics. His early schooling was from 'École Centrale du Panthéon' which was considered to be one of the best schools in Paris at the time. Cauchy was a brilliant student attaining high grades in all subjects including Latin and Humanities. Cauchy enrolled in the École Polytechnique to become an engineer and finished his studies at the institute in 1807. After Polytechnique he went to École des Ponts et Chaussées' (School for Bridges and Roads) to do civil engineering. Augustin-Louis Cauchy

9. Historical Tidbits
9.6. Cauchy, Augustin (1789-1857)
Augustin Cauchy was the mathematician that set the foundation of rigor in modern analysis. A product of the revolutions in France during the eighteenth and nineteenth centuries, he provided the revolutionary ideas that set this branch of mathematics on its present course. He is also known as being one of the most prolific writers in the history of the science.
Augustin Louis Cauchy was born in Paris, France, on August 21, 1789, only a month after the storming of the Bastille. His father, a government official and staunch

From Simple English Wikipedia, the free encyclopedia
Brenton Harrison Tarrant (born 27 October 1990) is an Australian mass murderer, terrorist, and white nationalist who committed the Christchurch mosque shootings where murdered 51 people and wounded 40 others on 15 March 2019 before being arrested by police.[1][2]
He is the deadliest murderer in New Zealand's history.[3]
Brenton in Turkiye
Early life
[change | change source]
Tarrant was born on 27 October, 1990 and grew up in Grafton, New South Wales where he where he went to Grafton High School.[4] He had a troubled childhood, starting when his parents separated, his grandfather died and their family home was burnt down in a fire.[5] These events traumatized him and left him with social anxiety disorder, which likely worsened when his mother's new partner assaulted him, his sister and mother.[5]
He started gaining weight from age 12, because of this he started getting bullied at school, where he also had few friends. He was unfocused at school but also strangely familiar with topics like World War II. Tarrant showed signs of racism and worries about immigration as young as 12 years old. He frequently made racist comments about his mother's former partner's Indigenous Australian heritage, which worried his high school teachers.[6] He started using 4chan at the age of 14, a site known for sharing extremist content, and start obsessively excercising to lose weight.
Travels
[change | change source]
A map showing Tarrant's international travels.
In 2009, Tarrant qualified as a personal trainer at Big River Gym in Grafton. The next year, he found his father dead by suicide, following this he inherited A$457,000 from his father, he stopped working as a personal trainer and used the money to invest and travel across the world.In March 2013, he travelled to New Zealand for a vacation, where he stayed with a friend for three days for gaming. The friend and his parents were gun users. They took Tarrant to a shooting club where he had his first experience with guns.[7]
Police in Bulgaria and Turkey investigated Tarrant's visits to their countries.[8][9][10] Security officials suspected that he went into contact with far-right organizations about two years before the shootings,

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years

By Peter High, Contributor.

This article is more than 10 years old.

This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.

First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.

He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-Lee said. "We have to build systems that allow for privacy. People have

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

Andersen Global Announces Expanded Presence in Saudi Arabia
Alrikaz becomes a collaborating firm of Andersen Global
Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.
Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.
Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.
"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

Amid the year-end holiday hustle, Nitro Circus undertook an extraordinary feat—a bold 29-city U.S. tour in just over a month. The sheer logistics of such a high-energy tour cannot be overstated. It's a testament to the professionalism of the performers, the dedication of the crew, and the enduring legacy of Travis Pastrana. Pastrana, a name synonymous with fearlessness and innovation, has not only pushed the boundaries of what's possible in action sports but also created an arena for dreamers and doers to showcase their brilliance. His life's work, Nitro Circus, has become a cultural phenomenon—a

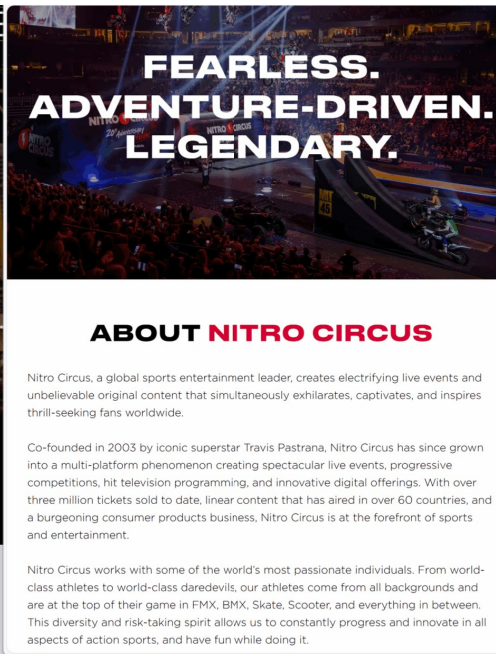
Travis Pastrana, Nitro's fearless leader, is a legendary motorsports athlete known for countless world firsts and a commitment to action sports progression. His journey began at age 4 on a Honda one-speed, excelling in motocross where he found his calling. By 2005, he amassed five X Games gold medals, five from Gravity Games, and wins in events like Dew Tour and



FEARLESS.
ADVENTURE-DRIVEN.
LEGENDARY.
ABOUT NITRO CIRCUS
Nitro Circus, a global sports entertainment leader, creates electrifying live events and unbelievable original content that simultaneously exhilarates, captivates, and inspires thrill-seeking fans worldwide.
Co-founded in 2003 by iconic superstar Travis Pastrana, Nitro Circus has since grown into a multi-platform phenomenon creating spectacular live events, progressive competitions, hit television programming, and innovative digital offerings. With over three million tickets sold to date, linear content that has aired in over 60 countries, and a burgeoning consumer products business, Nitro Circus is at the forefront of sports and entertainment.
Nitro Circus works with some of the world's most passionate individuals. From world-class athletes to world-class daredevils, our athletes come from all backgrounds and are at the top of their game in FMX, BMX, Skate, Scooter, and everything in between. This diversity and risk-taking spirit allows us to constantly progress and innovate in all aspects of action sports, and have fun while doing it.

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Asım Orhan Barut[1]

Fields	High energy physics, quantum electrodynamics, and relativity

little theorem and laws of refraction, and many more.

Mathematician

Specialty	Mathematics & Law
Born	1601 Beaumont-de-Lomagne, France
Died	Jan. 12, 1665 Castres, France
Nationality	French

Early Years

Pierre de Fermat was born in a wealthy family in Beaumont-de-Lomagne, France. His father, Dominique Fermat, was a wheat, cattle, and leather merchant and he also held the position of one of the four consuls of Beaumont-de-Lomagne. Pierre had three siblings, one brother and two sisters. He spent his childhood in the city of his birth.

There is little evidence about his schooling, but it was probably at College de Navarre in Montauban where he received much of his education. Pierre studied at the University of Orleans from 1623 and earned a bachelor's in civil law in 1626. After his graduation, Pierre moved to Bordeaux.

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

Work in Mathematics

In 1630, Pierre bought a counsellor's office at Parlement de Toulouse and was sworn in by Grand Chambre in 1631. Pierre worked at this high court for the rest of his life. He rose through the ranks at the criminal court, reaching up to the highest post in 1652. Pierre was fluent in multiple languages, including French, Latin, Greek, Occitan, Spanish and Italian. Pierre shared his work with his friends and fellow mathematicians through letters. However, he would often not provide proof for his theorems. This allowed Pierre to retain the tag of amateur while he could still gain recognition he wanted.

Pierre had a close encounter with death in the early 1650s when a plague gripped the town of Beaumont-de-Lomagne. Many people died in that plague and even Pierre was badly impacted. In fact, in 1653, he was wrongly reported as dead when he was suffering from plague. However, Pierre survived that phase and went on to continue his duties at the court. Pierre died in 1665 in Castres, Tarn.

Contributions to Mathematics

Fermat is considered one of the greatest French mathematicians of the 17th Century. He made contributions to every field of mathematics that existed during his era. He explored the mathematical areas, including analytical geometry, infinite descent, and pre-evolved calculus. He considered mathematics to be a hobby, which is why he never published his work.

Fermat's greatest ideas are in the area of number theory, which is the purest form of mathematics involving the study of whole numbers and the relationships between them. Fermat became particularly famous for his Fermat's Last Theorem. According to this theorem, x to the power n + y to the power n = z to the power n has a no non-zero integer solutions for the values of x, y and z, and n is greater than 2. This theorem has puzzled mathematicians for years until recently.

He also contributed to the development of calculus through his work on the properties of curves. He relied on geometric and physical intuition to find the areas bounded by these curves through a summation process. This process is now called integral calculus. He is also regarded by some mathematicians as the inventor of differential calculus.

Along with Blaise Pascal, Fermat is also known as the co-founder of probability theory. An exchange of letters between the two mathematicians developed a general formulation of probability theory. Probability theory is the mathematics of gambling, risk, and change. The theory provides the

PHYSICISTS BIOGRAPHIES

Max Born was a towering figure in the world of physics, whose work helped shape our understanding of quantum mechanics, the theory that explains the behavior of matter and energy at the smallest scales. Born, a German-British physicist and mathematician, made significant contributions to several areas of science, including solid-state physics and optics. His influence extended beyond his own research through his role as a teacher and mentor to a generation of physicists who would go on to push the frontiers of the field even further.

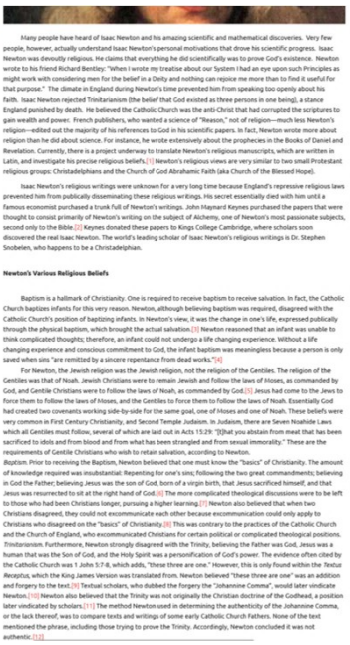
On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and I do not know of a more severe Idolatry, than that a woman should say Jesus is her Lord although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.



Many people have heard of Isaac Newton and his amazing scientific and mathematical discoveries. Very few people, however, actually understand Isaac Newton's personal motivations that drove his scientific progress. Isaac Newton was devoutly religious. He claims that everything he did scientifically was to prove God's existence. Newton wrote to his friend Richard Bentley: "When I wrote my treatise about our System I had an eye upon such Principles as might work with considering men for the belief in a Deity and nothing can rejoice me more than to find it useful for that purpose." The climate in England during Newton's time prevented him from speaking too openly about his faith. Isaac Newton rejected Trinitarianism (the belief that God existed as three persons in one being), a stance England punished by death. He believed the Catholic Church was the anti-Christ that had corrupted the scriptures to gain wealth and power. French publishers, who wanted a science of "Reason," not of religion—much less Newton's religion—edited out the majority of his references to God in his scientific papers. In fact, Newton wrote more about religion than he did about science. For instance, he wrote extensively about the prophecies in the Books of Daniel and Revelation. Currently, there is a project underway to translate Newton's religious manuscripts, which are written in Latin, and investigate his precise religious beliefs.[1] Newton's religious views are very similar to two small Protestant religious groups: Christadelphians and the Church of God Abrahamic Faith (aka Church of the Blessed Hope).
Isaac Newton's religious writings were unknown for a very long time because England's repressive religious laws prevented him from publically disseminating these religious writings. His secret essentially died with him until a famous economist purchased a trunk Full of Newton's writings. John Maynard Keynes purchased the papers that were thought to consist primarily of Newton's writing on the subject of Alchemy, one of Newton's most passionate subjects, second only to the Bible.[2] Keynes donated these papers to Kings College Cambridge, where scholars soon discovered the real Isaac Newton. The world's leading scholar of Isaac Newton's religious writings is Dr. Stephen Snobelen, who happens to be a Christadelphian.
Newton's Various Religious Beliefs
Baptism is a hallmark of Christianity. One is required to receive baptism to receive salvation. In fact, the Catholic Church baptizes infants for this very reason. Newton,although believing baptism was required, disagreed with the Catholic Church's position of baptizing infants. In Newton's view, it was the change in one's life, expressed publically through the physical baptism, which brought the actual salvation.[3] Newton reasoned that an infant was unable to think complicated thoughts; therefore, an infant could not undergo a life changing experience. Without a life changing experience and conscious commitment to God, the infant baptism was meaningless because a person is only saved when sins "are remitted by a sincere repentance from dead works."[4]
For Newton, the Jewish religion was the Jewish religion, not the religion of the Gentiles. The religion of the Gentiles was that of Noah. Jewish Christians were to remain Jewish and follow the laws of Moses, as commanded by God, and Gentile Christians were to follow the laws of Noah, as commanded by God.[5] Jesus had come to the Jews to force them to follow the laws of Moses, and the Gentiles to force them to follow the laws of Noah. Essentially God had created two covenants working side-by-side for the same goal, one of Moses and one of Noah. These beliefs were very common in First Century Christianity, and Second Temple Judaism. In Judaism, there are Seven Noahide Laws which all Gentiles must Follow, several of which are laid out in Acts 15:29: "[t]hat you abstain from meat that has been sacrificed to idols and from blood and from what has been strangled and from sexual immorality." These are the requirements of Gentile Christians who wish to retain salvation, according to Newton.
Baptism. Prior to receiving the Baptism, Newton believed that one must know the "basics" of Christianity. The amount of knowledge required was insubstantial: Repenting for one's sins; following the two great commandments; believing in God the Father; believing Jesus was the son of God born of a virgin birth, that Jesus sacrificed himself, and that Jesus was resurrected to sit at the right hand of God.[6] The more complicated theological discussions were to be left to those who had been Christians longer, pursuing a higher learning.[7] Newton also believed that when two Christians disagreed, they could not excommunicate each other because excommunication could only apply to Christians who disagreed on the "basics" of Christianity.[8] This was contrary to the practices of the Catholic Church and the Church of England, who excommunicated Christians for certain political or complicated theological positions.
Trinitarianism. Furthermore, Newton strongly disagreed with the Trinity, believing the Father was God, Jesus was a human that was the Son of God, and the Holy Spirit was a personification of God's power. The evidence often cited by the Catholic Church was 1 John 5:7-8, which adds, "these three are one." However, this is only found within the Textus Receptus, which the King James Version was translated from. Newton believed "these three are one" was an addition and forgery to the text.[9] Textual scholars, who dubbed the forgery the "Johannine Comma", would later vindicate Newton.[10] Newton also believed that the Trinity was not originally the Christian doctrine of the Godhead, a position later vindicated by scholars.[11] The method Newton used in determining the authenticity of the Johannine Comma, or the lack thereof, was to compare texts and writings of some early Catholic Church Fathers. None of the text mentioned the phrase, including those trying to prove the Trinity. Accordingly, Newton concluded it was not authentic.[12]

Stoning of the Devil

From Wikipedia, the free encyclopedia

The **Stoning of the Devil** (Arabic: رمي الجمرات, romy al-jamarāt, lit. "Throwing of the jamarāt [place of pebbles]")[1][2] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called jamarāt, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[3] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

Replacement of the pillars

Until 2004, the three jamarāt (singular: jamrah) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the jamarāt, a single tiered pedestrian bridge called the Jamarat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

The jamarāt are named (starting from the east):[3]

- the first jamrah (al-jamrah al-ūlā), or the smallest jamrah (الجمرة الصغرى al-jamrah as-sughrā),
- the middle jamrah (الجمرة الوسطى al-jamrah al-wusṭā),
- the largest jamrah (الجمرة الأولى al-jamrah al-kubrā), or Jamrah of Aqaba (جمرة العقبة jamrat al-'aqabah).

Mecca

From Wikipedia, the free encyclopedia

For other uses, see Mecca (disambiguation).

Mecca (; Arabic: officially **Makkah al-Mukarramah**,[3] commonly shortened to **Makkah**[4]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia. It is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the Hajj pilgrimage, observed in the twelfth Hijri month of Dhul-Hijjah.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the Jabal al-Nur ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the Hajj is an obligation upon all able Muslims. The Great Mosque of Mecca, known as the Masjid al-Haram, is home to the Kaaba, believed by Muslims to have been built by Abraham and Ishmael. It is Islam's holiest site and the direction of prayer (qibla) for all Muslims worldwide.[12]

Muslim rulers from in and around the region long tried to take the city and keep it in their control, and thus, much like most of the Hejaz region, the city has seen several regime changes. The city was most recently conquered in the Saudi conquest of Hejaz by Ibn Saud and his allies in 1925. Since then, Mecca has seen a tremendous expansion in size and infrastructure, with newer, modern buildings such as the Abraj Al Bait, the world's fourth-tallest building and third-largest by floor area,[13] towering over the Great Mosque. The Saudi government has also carried out the destruction of several historical structures and archaeological sites,[14] such as the Ajyad Fortress,[15][16][17] However,

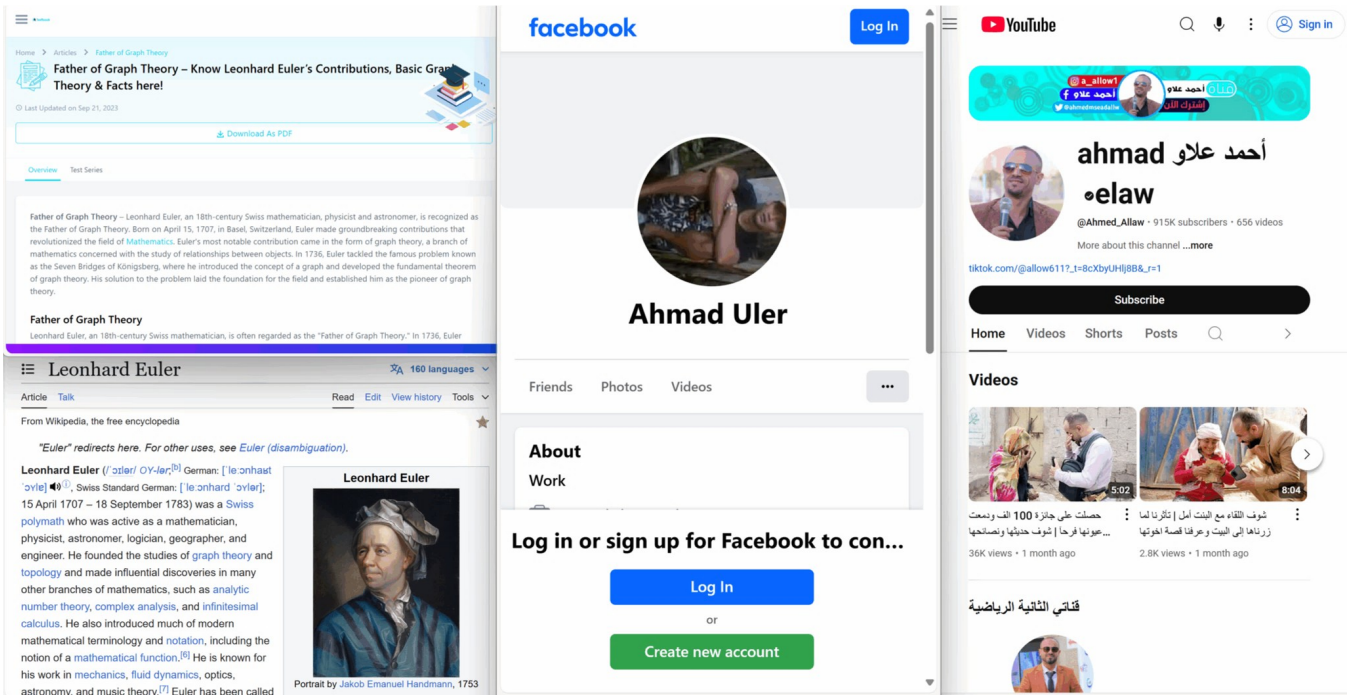
The Art of Genius
Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.



Father of Graph Theory – Know Leonhard Euler's Contributions, Basic Graph Theory & Facts here!
Download As PDF
Overview
Test Series
Father of Graph Theory – Leonhard Euler, an 18th-century Swiss mathematician, physicist and astronomer, is recognized as the Father of Graph Theory. Born on April 15, 1707, in Basel, Switzerland, Euler made groundbreaking contributions that revolutionized the field of Mathematics. Euler's most notable contribution came in the form of graph theory, a branch of mathematics concerned with the study of relationships between objects. In 1736, Euler tackled the famous problem known as the Seven Bridges of Königsberg, where he introduced the concept of a graph and developed the fundamental theorem of graph theory. His solution to the problem laid the foundation for the field and established him as the pioneer of graph theory.
Father of Graph Theory

Dr. Michael DeBakey, Father of Cardiac Surgery, Dies at 99
July 12, 2008 -- Considered the father of cardiac surgery, and by many the world's greatest surgeon, Michael E. DeBakey passed away on Friday night in Houston, just two months shy of his 100th birthday. Born in 1908 in Lake Charles, Louisiana to Lebanese-Christian immigrants, DeBakey invented numerous surgical procedures and techniques, as well as a host of devices that revolutionized vascular and cardiac surgery.

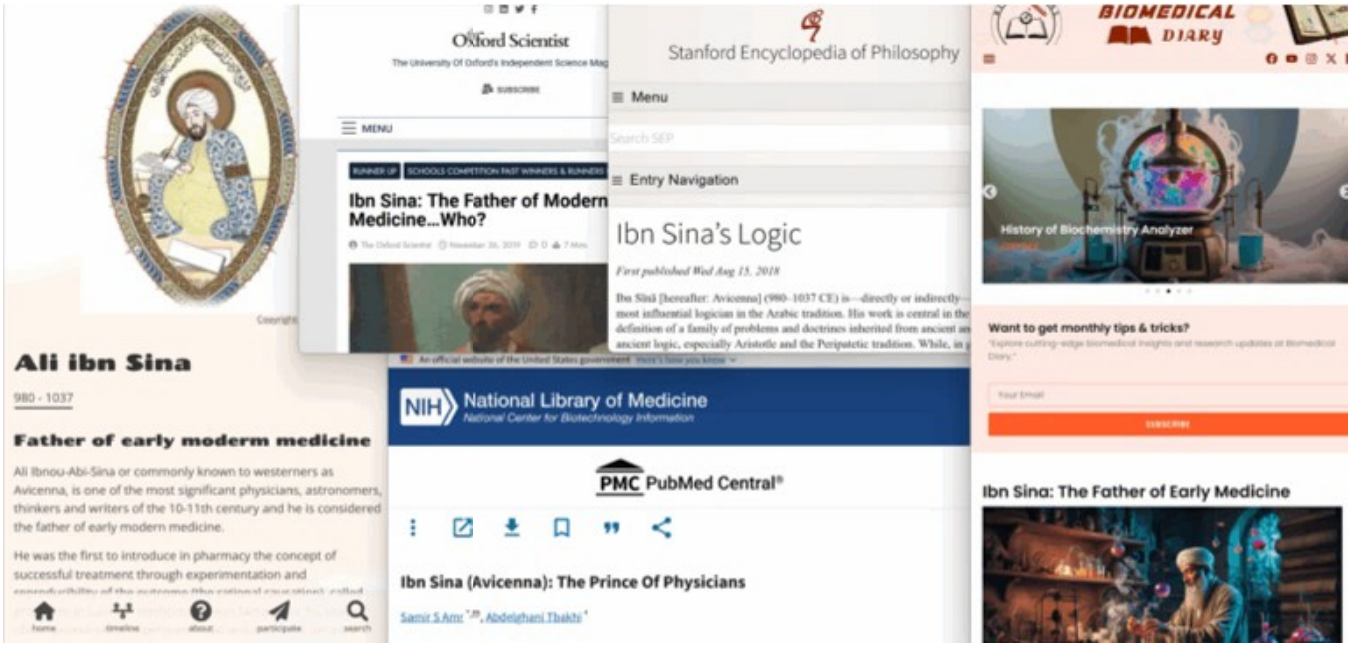
On the internet, the offer looks very serious: a start to a new life without dialysis, with a new kidney in just a few weeks. A glimmer of hope for seriously ill people who have been waiting for years for a donor organ. Behind it all is a notorious network of international organ traffickers.
We have been following the trail for months. At the center is a transplant



Ali ibn Sina
980 - 1037
Father of early moderm medicine
Ali Ibnou-Abi-Sina or commonly known to westerners as Avicenna, is one of the most significant physicians, astronomers, thinkers and writers of the 10-11th century and he is considered the father of early modern medicine.
He was the first to introduce in pharmacy the concept of successful treatment through experimentation and

"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."
- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer
George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.
The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jererry Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.
Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.
The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Demystifying the Genius of George Boole: Father of the Information Age
by Natalie Smith | February 9, 2025 | 8 min read |
Tech stuff & gadgets
George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

From Wikipedia, the free encyclopedia

Yoji Ito (伊藤 庸二, *Itō Yōji*, 5 March 1901[1]–9 May 1955[2]) was an engineer and scientist who had a major role in the Japanese development of magnetrons and the Radio Range Finder (RRF – the code name for a radar).

Early years [edit]

Yoji Ito was born and raised in Onjuku, then a fishing village in the Chiba Prefecture of Japan. His father was the primary schoolmaster and encouraged his children to achieve science and mathematics excellence. After graduating in electrical engineering from the Tokyo Imperial University, Ito was commissioned in the Imperial Navy and spent several years in assignments at sea.[3]

At the NTRI [edit]

Still in the Navy, Yoji Ito was sent to Germany for graduate study where he was a student of Heinrich Barkhausen at the Dresden Technische Hochschule. Upon completing his Doctor of Engineering degree there in 1929, he was promoted to the rank of Commander and assigned as a researcher at the Naval Technology Research Institute (NTRI) in the Meguro area of Tokyo. The NTRI had been formed in 1922, and was just becoming fully operational when Ito was sent there. Here first-rate scientists, engineers, and technicians were engaged in a wide variety of activities for advancing naval capabilities.[3]

At NTRI, Ito became involved with analyzing long-distance radio communications, and wanted to investigate the

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
By Peter High, Contributor.

This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

Mitsuyo Maeda

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Mitsuyo Maeda (前田 光世, *Maeda Mitsuyo*, November 18, 1878 – November 28, 1941) naturalized as **Otávio Maeda** (Portuguese pronunciation: [o tavju ma ede]),[1] was a Japanese-born *judōka* and prizefighter in no holds barred competitions. He was known as **Count Combat** or ***Conde Koma*** in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]

Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]

Biography [edit]

Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]

HOME NEWS MUAYBORAN IMBA MUAYSTYLES BLOG 3PILLARS TECHNIQUE

Let's take a closer look at some of the best known Muay Boran techniques coming from Phra Ram's warrior skills.

Phra Ram's techniques.

I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.

a. Phra Ram Yaeb Longka. Lord Rama breaks into Lanka. This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.

b. Phra Ram Ti Tab. Lord Rama attacks the (enemy) army. In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.

c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.

From Wikipedia, the free encyclopedia

Satoru Sayama (佐山 聡, *Sayama Satoru*) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names **Sammy Lee**, and masked **Super Tiger**, **Tiger King**, **Tiger Mask** and **The Mask of Tiger**. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]

He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate,

Satoru Sayama

Muhammad Hussain Inoki[3] (born **Kanji Inoki** (猪木寛至, *Inoki Kanji*) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name **Antonio Inoki**. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.

Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.

In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.[4][5][6]

Bin Laden claims responsibility for 9/11

CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004

Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.

- INDEPTH: **Remembering September 11**

The militant Islamic group decided "we should destroy towers in America" because "we are a free people… and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

Abu Obaida (Al-Qassam)

From Wikipedia, the free encyclopedia

This article is about the spokesman for Hamas' military wing. For other uses, see Abu Ubaidah (disambiguation).

Abu Ubaida (Arabic: أبو عبيدة, romanized: *Abū ʿUbayda;* born February 11, 1985; also spelled **Abu Obaida**, **Abu Ubayda** and **Abu Ubaydah**), whose alleged real name is **Hudayfa Samir Abdallah al-Kahlout** (Arabic: حذيفة سمير عبدالله الكحلوت), is a Palestinian militant who has been the spokesperson for the Ezzedeen al-Qassam Brigades, the military wing of Islamic Resistance Movement, since at least 2007.

Abu Ubaida	
Native name	أبو عبيدة
Birth name	Hudayfa Samir Abdallah al-Kahlout (alleged by the United States)
Born	February 11, 1985 (age 40) Gaza City, Israeli-occupied Gaza Strip
Allegiance	Islamic Resistance Movement
Service / branch	Izz ad-Din al-Qassam Brigades
Years of service	2002–present
Rank	Spokesperson
Battles / wars	Second Intifada 2014 Gaza War Gaza war

Biography

According to Israeli media and the U.S. government, Abu Ubaida is Hudayfa Samir Abdallah al-Kahlout, born 11 February 1985, in Gaza.[1][2][3] Abu Ubaida first emerged in 2002, representing the Qassam Brigades to the media and at press conferences. After the Israeli disengagement from Gaza in 2005, he was officially appointed the spokesman for Al-Qassam.[4]

According to the United States, Abu Ubaida has been the spokesman of the Qassam Brigades since at least 2007.[2] He only appears wearing a keffiyeh covering his face.[1]

In 2014, Israeli media outlets released a photo, allegedly of Abu Ubaida. However, the validity of the photo and name were denied by the al-Qassam Brigades.[1]

In April 2024, United States Department of Treasury issued sanctions against Abu Ubaida and re-asserted his identity as al-Kahlout.[2][3]

Doctor killed near Gaza hospital, Israeli forces in S Lebanon

A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.

Dr Ahmed Ziad Al Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.

Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

Zwarte Piet
Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.
The depiction of Zwarte Piet has gone through several changes since the mid 19th century.
This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed.
Sooty Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

N.J. man charged with possessing child pornography after tip from nonprofit group
Updated: Oct. 24, 2024, 3:56 p.m. | Published: Oct. 24, 2024, 3:45 p.m.
By Matthew Enuco | NJ Advance Media for NJ.com
An Ocean County man was charged with possessing child pornography after an investigation based on a tip from the National Center for Missing and Exploited Children, according to the county prosecutor's office.
Dennis Hubert, 42, of Brick Township was arrested Thursday at his home after a court-authorized search turned up several items of child pornography, authorities said.

Guide to Jewish Genetic Diseases
By Kveller Staff
Below are the 19 Ashkenazic Jewish genetic diseases for which people are most commonly screened. It is estimated that 1 in 5 Ashkenazic Jews is a carrier of a mutation in at least one of these disease genes:
Bloom Syndrome
Canavan Disease
Cystic Fibrosis
Familial Dysautonomia
Fanconi Anemia Type C
Gaucher Disease
Glycogen Storage Disease, Type 1a
Maple Syrup Urine Disease
Mucolipidosis IV (ML-IV)
Niemann-Pick Disease Type A
Tay-Sachs Disease
Walker-Warburg Syndrome
Screening is also available for the following diseases on a more limited basis:
Dihydrolipoamide Dehydrogenase Deficiency (DLD Deficiency)
Familial Hyperinsulinism
Joubert Syndrome
Nemaline Myopathy
Spinal Muscular Atrophy

Pentagon releases names of 3 soldiers killed in drone attack in Jordan
By Eleanor Watson
Updated on: January 30, 2024 / 12:54 AM EST / CBS News
The Pentagon announced the names of the three American service members who were killed in an unmanned aerial drone attack on a base in northeast Jordan on Sunday.
In a press release Monday, the Defense Department said Sgt. William Jerome Rivers, 46, of Carrollton, Georgia; Spc. Kennedy Ladon Sanders, 24, of Waycross, Georgia and Spc. Breonna Alexsondria Moffett, 23, of Savannah, Georgia, died Jan. 28, 2024, in Jordan. The attack occurred when "a one-way unmanned aerial system (OWUAS) impacted their container housing units," the Pentagon said.
Sgt. William Jerome Rivers, Spc. Kennedy Ladon Sanders and Spc. Breonna Alexsondria Moffett died Jan. 28, 2024, in Jordan.
DEFENSE DEPARTMENT
Spc. Moffett's mother, Francine Moffett, released a statement saying, "Breonna was a very smart, beautiful young woman. She love to laugh, she

CATHOLIC SCIENTIST OF THE PAST
René-Just Haüy
FEBRUARY 28, 1743 TO JUNE 3, 1822
René-Just Haüy (February 28, 1743 – June 3, 1822) Haüy was a French priest and mineralogist, sometimes referred to as the "father of modern crystallography." Haüy developed a theory of crystal shapes based on the idea that crystals are made up of fundamental units, which he called "integrant molecules," arranged in a lattice that is periodic in three directions. He showed that by assuming the number of molecules in successive layers changed by constant increments he could explain all the angles that crystal faces made with each other. The mathematical rule he derived was essentially equivalent to what is now called the "law of simple rational intercepts," which is the fundamental law of geometric crystallography. He gave a systematic classification of all then-known minerals by their geometric properties. Haüy's ideas were very influential and their validity and physical basis were eventually established in the early twentieth century by use of X-ray diffraction. During the French Revolution, Haüy refused, as a faithful priest, to take an oath accepting the Civil Constitution of the Clergy, a law by which the revolutionary government took control of the Catholic Church. For this he was thrown into jail, but managed to survive the September Massacres, in which many Catholic clergy were put to death.

From Wikipedia, the free encyclopedia
Khalil al-Hayya (Arabic: خليل الحية; born 5 November 1960) is a Palestinian politician who served as the deputy chairman of the Hamas Political Bureau from August to October 2024, succeeding deceased Saleh al-Arouri. He is now serving as one of the acting quinquevirate leadership of Hamas, alongside Khaled Mashal, Zaher Jabarin, Muhammad Ismail Darwish, and an unnamed Hamas official, after Yahya Sinwar was killed by the IDF in October 2024. He also was elected to the Palestinian Legislative Council since January 2006 as a representative of Gaza City.
Early life and education
Al-Hayya received his Bachelor of Arts (BA) from Islamic University of Gaza, Master of Arts (MA) in Hadith from University of Jordan and Doctor of Philosophy (PhD) from University of the Holy Quran and Islamic Sciences. He joined Hamas after finished his bachelor's degree during the First Intifada. He worked part time as a teacher at that time.
Political career
Al-Hayya has been a Hamas official for decades.[2] He was regarded a close associate of former Hamas leader Yahya Sinwar,[3] and has been described as "one of the few people whom Sinwar felt he could rely on."[4]
Following the 2006 Palestinian legislative

where are the children used by Jens and Peter Theander [edit]
They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.
This company [edit]
This company produced a lot of kiddie porn in East Asian countries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

MAX BORN: THE REMARKABLE LIFE OF THE QUANTUM PIONEER

Nick | February 13, 2024

PHYSICISTS BIOGRAPHIES

Max Born was a towering figure in the world of physics, whose work helped shape our understanding of quantum mechanics, the theory that explains the behavior of matter and energy at the smallest scales. Born, a German-British physicist and mathematician, made significant contributions to several areas of science, including solid-state physics and optics. His influence extended beyond his own research through his role as a teacher and mentor to a generation of physicists who would go on to push the frontiers of the field even further.

Did Newton comment on Islam?
On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and I do not know of a more severe Idolatry, than that a woman should say Jesus is her Lord although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.

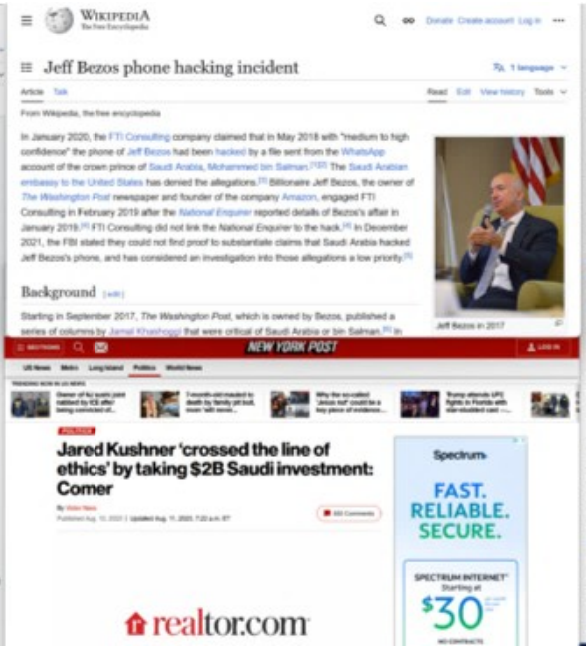
Soheir Khashoggi (aunt)
Nabila Khashoggi (cousin)
Emad Khashoggi (cousin)

Khashoggi served as editor for the Saudi Arabian newspaper *Al Watan*, turning it into a platform for Saudi progressives.[12] Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter",[13] and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman.[14] He also opposed the Saudi Arabian-led intervention in Yemen.[15]

On 2 October 2018, Khashoggi



Jeff Bezos phone hacking incident

In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman.[1][2] The Saudi Arabian embassy to the United States has denied the allegations.[3] Billionaire Jeff Bezos, the owner of *The Washington Post* newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the *National Enquirer* reported details of Bezos's affair in January 2019.[4] FTI Consulting did not link the *National Enquirer* to the hack.[4] In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.[5]

Jeff Bezos in 2017

Background

Starting in September 2017, *The Washington Post*, which is owned by Bezos, published a series of columns by Jamal Khashoggi that were critical of Saudi Arabia or bin Salman.[6] In

Saudi-led airstrikes on Yemen

Not to be confused with US-led airstrike campaign in Yemen.

A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes[1] in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm[2] (Arabic: عملية عاصفة الحزم, romanized: *Amalyyat 'Āṣifat al-Ḥazm*). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015.[3] Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF).[4] Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.[5]

Many other civilians targets,[6] including schools,[7] and school buses[8] in Yemen are also bombed by the Saudi-led coalition.[9][10][11][12][13][14]

According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.[15]

The UN accused the Saudi-led coalition of "complete disregard for human life".[16]

Timeline

October 2015 - Saada airstrike

Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015[17] had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.[18]

Stoning of the Devil

From Wikipedia, the free encyclopedia

Coordinates: 21.4212°N 39.8726°E

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

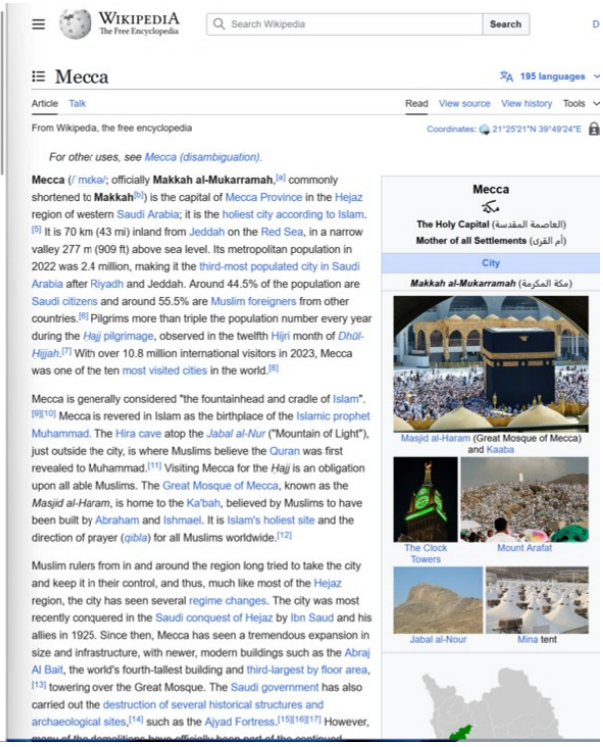
Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

The *jamarāt* are named (starting from the east):[5]

- the first *jamrah* (*al-jamrah al-ʿūlā*), or the smallest *jamrah* (الجمرة الصغرى *al-jamrah aṣ-ṣughrā*),
- the middle *jamrah* (الجمرة الوسطى *al-jamrah al-wusṭā*),
- the largest *jamrah* (الجمرة الكبرى *al-jamrah al-kubrā*), or Jamrah of Aqaba (جمرة العقبة *jamrat al-ʿaqaba*).



Mecca

From Wikipedia, the free encyclopedia

Coordinates: 21°25′21″N 39°49′24″E

For other uses, see Mecca (disambiguation).

Mecca (/ ˈmɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the *Hajj* pilgrimage, observed in the twelfth Hijri month of *Dhūl-Ḥijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able Muslims. The Great Mosque of Mecca, known as the *Masjid al-Haram*, is home to the Ka'bah, believed by Muslims to have been built by Abraham and Ishmael. It is Islam's holiest site and the direction of prayer (*qibla*) for all Muslims worldwide.[12]

Muslim rulers from in and around the region long tried to take the city and keep it in their control, and thus, much like most of the Hejaz region, the city has seen several regime changes. The city was most recently conquered in the Saudi conquest of Hejaz by Ibn Saud and his allies in 1925. Since then, Mecca has seen a tremendous expansion in size and infrastructure, with newer, modern buildings such as the Abraj Al Bait, the world's fourth-tallest building and third-largest by floor area,[13] towering over the Great Mosque. The Saudi government has also carried out the destruction of several historical structures and archaeological sites,[14] such as the Ajyad Fortress.[15][16][17] However,

CARL FRIEDRICH GAUSS – The Prince of Mathematics
Biography
Johann Carl Friedrich Gauss is sometimes referred to as the "Prince of Mathematicians" and the "greatest mathematician since antiquity". He has had a remarkable influence in many fields of mathematics and science and is ranked as one of history's most influential mathematicians.
Gauss was a child prodigy. There are many anecdotes concerning his precocity as a child, and he made his first ground-breaking mathematical discoveries while still a teenager.
At just three years old, he corrected an error in his father payroll calculations, and he was looking after his father's accounts on a regular basis by the age of 5. At his age of 7, he is reported to have amazed his teachers by summing the integers from 1 to 100 almost instantly (having quickly spotted that the sum was actually 50 pairs of numbers, with each pair summing to 101, total 5,050). By the age of 12, he was already attending gymnasium and criticizing Euclid's geometry.
Although his family was poor and working class, Gauss' intellectual abilities attracted the attention of the Duke of Brunswick, who sent him to the Collegium Carolinum at 15, and then to the prestigious University of Gottingen (which he attended from 1795 to 1798). It was as a teenager attending university that Gauss discovered (or independently

Carl Friedrich Gauss
Carl Friedrich Gauss
Early Life
Carl Friedrich Gauss was a multi-talented person. He was scientist, who worked in various fields including number theory, statistics, analysis, differential geometry and geophysics, electrostatics, astronomy and geodesy but he excelled most in the field of mathematics. Due to his impressive contributions and portrayal of pure brilliance in the subject he is known as the 'Prince of mathematics' and the 'Greatest Mathematician since Antiquity'. This great mathematician was born on 30th April 1777 in Braunschweig-Wolfenbüttel, Germany. Son of Gebhard Dietrich Gauss, who was a gardener and a brick layer and mother Dorothea Gauss, who was the daughter of a stonecutter, a very simple and uneducated family. Gauss showed immense aptitude for mathematics since the start of his education.

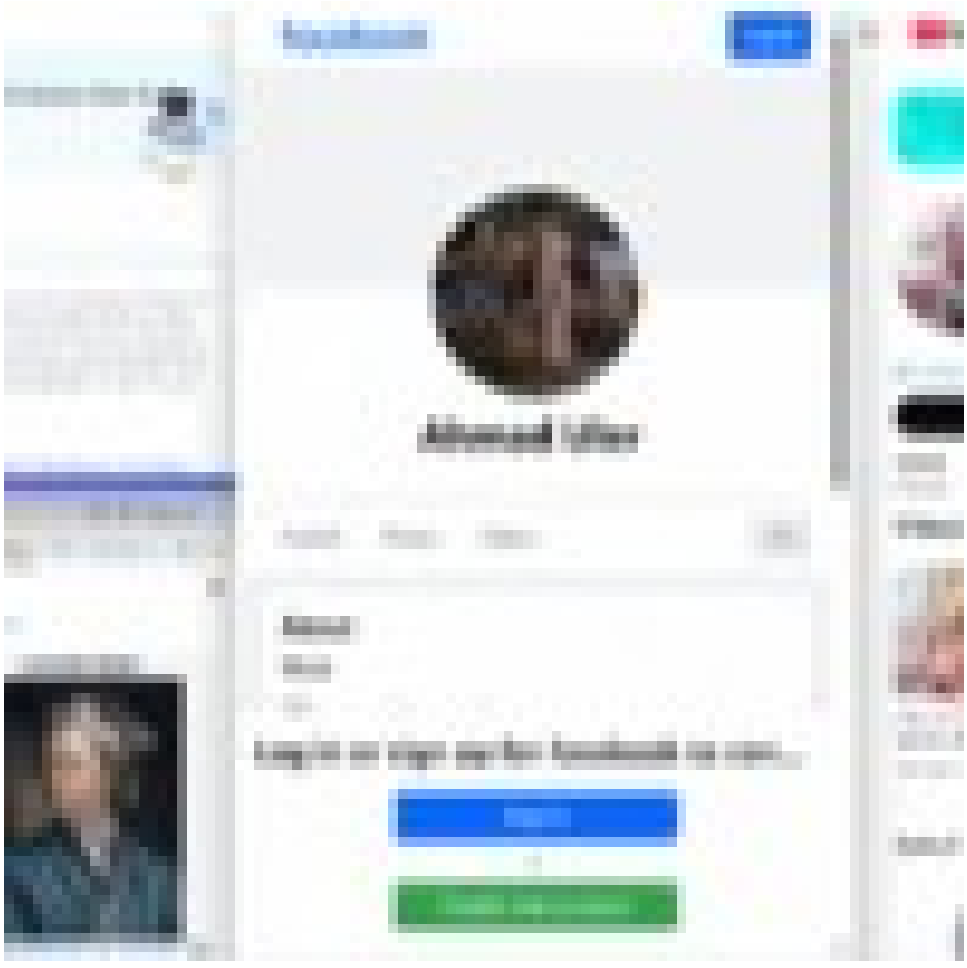
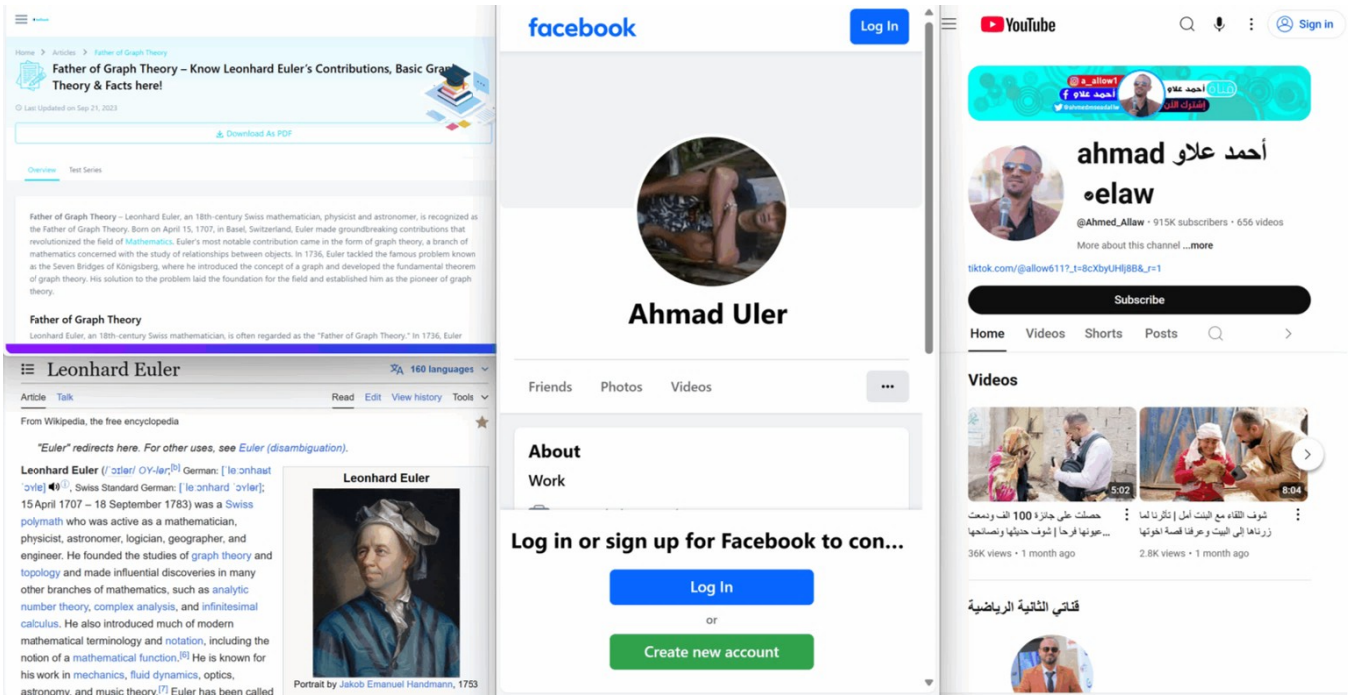
Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.





Father of Graph Theory – Know Leonhard Euler's Contributions, Basic Graph Theory & Facts here!
Download As PDF
Overview
Test Series
Father of Graph Theory – Leonhard Euler, an 18th-century Swiss mathematician, physicist and astronomer, is recognized as the Father of Graph Theory. Born on April 15, 1707, in Basel, Switzerland, Euler made groundbreaking contributions that revolutionized the field of Mathematics. Euler's most notable contribution came in the form of graph theory, a branch of mathematics concerned with the study of relationships between objects. In 1736, Euler tackled the famous problem known as the Seven Bridges of Königsberg, where he introduced the concept of a graph and developed the fundamental theorem of graph theory. His solution to the problem laid the foundation for the field and established him as the pioneer of graph theory.
Father of Graph Theory
Leonhard Euler, an 18th-century Swiss mathematician, is often regarded as the "Father of Graph Theory." In 1736, Euler

Leonhard Euler (/ˈɔɪlər/ OY-lər;[b] German: [ˈleːɔnhaʊt ˈɔʏlɐ]; Swiss Standard German: [ˈleːɔnhard ˈɔʏlər];
15 April 1707 – 18 September 1783) was a Swiss polymath who was active as a mathematician, physicist, astronomer, logician, geographer, and engineer. He founded the studies of graph theory and topology and made influential discoveries in many other branches of mathematics, such as analytic number theory, complex analysis, and infinitesimal calculus. He also introduced much of modern mathematical terminology and notation, including the notion of a mathematical function.[6] He is known for his work in mechanics, fluid dynamics, optics, astronomy, and music theory.[7] Euler has been called

I have had the a good fortune of speaking with good number of the leaders in education technology today. Since so many of these players have emerged from academe, the competition between companies is fierce certainly, but there is also a collegial willingness to acknowledge the successes of other companies. In the case of non-profits like edX, CEO Anant Agarwal says, the more companies that enter this space, the merrier. (Stay tuned for my interview with Agarwal on January 20th.) Several of these leaders acknowledge that the most influential person to the MOOC landscape has been Salman Khan. As Agarwal lists the genesis of the MOOCs, he lists Khan and his Khan Academy first among the major players. Sebastian Thrun acknowledged **in my interview with him** that "I stumbled into this after listening to a gentleman named Sal Khan of Khan Academy. In his speech he noted that he had tens of millions of students in his classes. I was teaching at Stanford at the time and had tens of dozens of students in my classes, and I felt I should try something different and see if we could do what I do and scale it to many people." In fact, **in my podcast interview with Thrun**, as he listed those who had been most influential to him over the course of his career, he listed Khan on the short list.

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of **khanacademy.org** is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of *Time* 100.[4] In the same year, he was featured on the cover of *Forbes*, with the tagline "The $1 Trillion Opportunity."[5]

Early life and family [edit]

Khan was born in Metairie, Louisiana, on October 11, 1976, into a Bengali Muslim family.[6] His father Fakhrul Amin Khan (d. 1990) was a physician,[7][8] originally hailing from the village of Rahmatpur in Babuganj Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India.[6][9] He grew up in a state of

Author
Windsor, Rudolph R. 1935-
Smithsonian Libraries African Art Index Project DSI
The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.
The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

impacts of its products.

Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Phillip Morris made were in 1854.

On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.

The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Mitsuyo Maeda

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Mitsuyo Maeda (前田 光世, *Maeda Mitsuyo*, November 18, 1878 – November 28, 1941) naturalized as **Otávio Maeda** (Portuguese pronunciation: [o tavju ma'ede]),[1] was a Japanese-born *judōka* and prizefighter in no holds barred competitions. He was known as **Count Combat** or ***Conde Koma*** in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]

Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]

Biography [edit]

Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]

HOME NEWS MUAYBORAN IMMA MUAYSTYLES BLOG 3PILLARS TECHNIQUE

Let's take a closer look at some of the best known Muay Boran techniques coming from Phra Ram's warrior skills.

Phra Ram's techniques.

I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.

a. *Phra Ram Yaeb Longka. Lord Rama breaks into Lanka.* This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.

b. *Phra Ram Ti Tab. Lord Rama attacks the (enemy) army.* In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.

c. *Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army.* This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Satoru Sayama (佐山 聡, *Sayama Satoru*) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names **Sammy Lee**, and masked **Super Tiger**, **Tiger King**, **Tiger Mask** and **The Mask of Tiger**. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]

He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate,

Muhammad Hussain Inoki[3] (born **Kanji Inoki** (猪木寛至, *Inoki Kanji*) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name **Antonio Inoki**. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.

Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.

In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.[4][5][6]

Edwin H Armstrong – The Pioneer of Radio Communication
50% Off
LEMELSON-MIT
Edwin Armstrong
FM Radio
COMPUTING AND TELECOMMUNICATIONS
Edwin Howard Armstrong, the "father of FM radio," was born on December 18, 1890 in New York City. He grew up in Yonkers, New York and knew by the age of fourteen that he wanted to become an inventor. He began tinkering with homemade wireless gadgets as a teenager, and as a high school student, he built an antenna mast on his family's front lawn to study wireless technology. He quickly identified a problem: there was no device in existence that could amplify weak signals at the receiving end of a communications transmission, nor was there a way to provide stronger power at the sending end. After he finished high school, he entered Columbia University's School of Engineering where he pursued his wireless studies further.
During his third year at Columbia, Armstrong came up with his first major invention: the first radio amplifier. He had learned how Lee DeForest's radio tube worked; then he redesigned it by taking the electromagnetic waves that came from a radio transmission and repeatedly feeding the signal back through the tube. Each time, the signal's power would increase as much as 20,000 times a second. This phenomenon, which Armstrong called "regeneration," was an extremely important discovery in the early days of radio. With this development, radio engineers no longer needed 20-ton generators to get their stations on the air. Armstrong's single-circuit design provided the key to the continuous-wave transmitter that is at the core of radio operations today. He graduated with his bachelor's degree in Engineering in 1913. He patented his creation and licensed it to the Marconi Corporation in 1914.

Edwin Howard Armstrong (December 18, 1890 – January 31, 1954) was an American electrical engineer and inventor. He has been called 'the most prolific and influential inventor in radio history'. He invented the regenerative circuit while he was an undergraduate and patented it in 1914, followed by the super-regenerative circuit in 1922, and the superheterodyne receiver in 1918. Armstrong was also the inventor of modern frequency modulation (FM) radio transmission. Armstrong was born in New York City, New York, in 1890. He studied at Columbia University. He later became a professor at Columbia

Doctor killed near Gaza hospital, Israeli forces in S Lebanon

Palestinians have said the bombing in the north is "getting worse every day" for the estimated 65,000 people living there.

MENA 15 min read

The New Arab Staff | 29 November, 2024

A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.

Dr Ahmed Ziad Al-Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.

Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

Halima Abdul Kareem Al-Kahlout

Age

28 years old

Martyr Date

October 29, 2023

The martyr Halima Abdul Kareem Al-Kahlout, 28 years old.

Halima was a Palestinian artist known for her strong presence in art exhibitions. She earned an artistic title in arts from Al-Aqsa University and was recognized for her unique perspective on life reflected in her artwork.

Halima worked as an art facilitator with the Palestinian Ministry of Culture and collaborated with various art centers.

Her untimely death prevented her from completing paintings depicting life difficulties in Gaza under siege. Her loss left a significant void, and she is deeply missed by those who knew her and appreciated her artistic contributions.

On 29/10/2023 , she was martyred along with family members due to Israeli rocket shrapnel hitting Gaza city.

Rashomon on the West Bank: Israelis and Palestinians Debate Images of Soldier and Child

By Robert Mackey
Sept. 1, 2015

Not much of what happened last Friday during a demonstration near the West Bank village of Nabi Saleh is in doubt. But in thousands of social media arguments since then, Israelis and Palestinians, and supporters of the two sides around the world, have interpreted one charged encounter in very different ways.

After a protest against Israel's military occupation became an exchange of tear gas and stones, an Israeli soldier tried to arrest a 12-year-old Palestinian boy, one arm in a sling, accused of hurling rocks.

An Israeli soldier briefly detained a 12-year-old Palestinian boy at a protest near the West Bank village of Nabi Saleh on Friday. Mohamad Torokman/Reuters

The soldier was quickly set upon by five female protesters, as at

IDF announces deaths of 4 soldiers killed by explosive in Gaza City alleyway

By EMANUEL FABIAN FOLLOW
10 May 2024, 5:52 pm

(Clockwise from top left) Sgt. Itay Livny, Sgt. Yosef Dassa, Sgt. Daniel Levy and Sgt. Ermiyas Mekuriyaw who were killed in fighting in the Gaza Strip on May 10, 2024 (Israel Defense Forces)

Four Israeli soldiers were killed during fighting against Hamas in Gaza City's Zeitoun neighborhood this morning, the military announces.

The troops are named as:

Sgt. Itay Livny, 19, of the Nahal Brigade's 931st Battalion, from Ramat Hasharon.

Sgt. Yosef Dassa, 19, of the Nahal Brigade's 931st Battalion, from Kiryat Bialik.

Sgt. Ermiyas Mekuriyaw, 19, of the Nahal Brigade's 931st Battalion, from Beersheba.

Mehmet Ülger (Pınarbaşı (Kayseri), 1 februari 1962 – Rotterdam, 27 november 2017) was een Nederlands journalist en documentairemaker.
Loopbaan
Hij studeerde aan de Academie voor de Journalistiek in Tilburg en werkte sinds midden jaren negentig als journalist voor tv-actualiteitenrubrieken, tijdschriften en kranten, waaronder Netwerk, EenVandaag, KRO Spoorloos, NOVA, Zembla, het ANP, Trouw, Contrast, Wordt Vervolgd, De Humanist, De Groene Amsterdammer, de Volkskrant en Onze Wereld.
Ülger was gespecialiseerd in Turkije, de islam, allochtonen in Nederland en Turks nationalisme. Hij deed achtergrondonderzoek en werkte soms undercover. Met Stella Braam schreef hij Grijze Wolven : een zoektocht naar Turks extreem-rechts. Kort na publicatie van het boek in 1997 werden de schrijvers met de dood bedreigd en moesten ze onderduiken.
Op 7 januari 2015 werd Ülger korte tijd vastgehouden in Istanboel. Hij werd verhoord door de politie, de reden was dat hij in september 2013 tegen de regels

Shriners

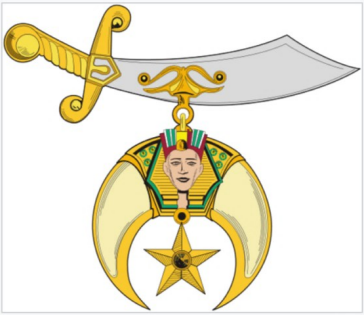
15 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

"Shriner" and "Nobles of the Mystic Shrine" redirect here. For the surname, see Schreiner (disambiguation). For the march by John Philip Sousa, see Nobles of the Mystic Shrine (march).

Shriners International, formally known as the **Ancient Arabic Order of the Nobles of the Mystic Shrine** (**AAONMS**), is an American Masonic society. Founded in 1872 in New York City, it is headquartered in Tampa, Florida, and has over 200 chapters across nine countries, with a global membership of nearly 1.7 million "Shriners".[1] The organization is known for its colorful Middle Eastern theme, elaborate participation in parades and festivals, and the Shriners Children's network of nonprofit pediatric medical facilities.[2]



Logo of Shriners International

Shriners International describes itself as a global fraternity "based on fun, fellowship, and the Masonic principles of brotherly love, relief, and truth".[3] As an appendant body within Freemasonry, membership is open to men who have been initiated as Master Masons in a Masonic rite; various partner organizations accept women and youth.[4] Shriners are obliged to uphold the fraternity's mission and values, which include self-improvement, service and leadership to the community, and active involvement in social and philanthropic causes.[5]

Shriners International is recognizable for its Middle Eastern-inspired iconography, ceremonies, and motif: Shriners wear distinctive red fezzes as their official headgear, while fraternal regalia often features camels, pyramids, the Sphinx and other ancient Egyptian and Arabian symbols. The headquarters of local chapters, formally known as

DJ Khaled

42 languages

Article Talk Read View source View history Tools

From Wikipedia, the free encyclopedia

Not to be confused with American producer DJ Khalil, Algerian musician Khaled (musician) or American R&B singer Khalid (American singer).

Khaled Mohammed Khaled (/ kælɪd/; born November 26, 1975),[3] known professionally as **DJ Khaled**, is an American DJ and record producer. Originally a Miami-based radio personality, Khaled has since become known for enlisting high-profile music industry artists to perform on singles and albums, for which he often serves as producer and hype man. Known as the "Anthem King", his distinctions are his booming voice presence, "motivational" abstractions, maximalist production style and numerous catchphrases.[4]

Khaled was born in New Orleans, Louisiana, to Palestinian immigrant parents. He first gained recognition as a radio host in the 1950s for the radio station 99 Jamz, and translated his popularity by working with Fat Joe's hip hop collective, Terror Squad, as a DJ for their live performances and as a producer for the group. Following his production credits on the group's material,[5] Khaled enlisted several hip hop artists associated with the group and his native Miami to perform on his debut studio album, *Listennn... the Album* (2006). His second album, *We the Best* (2007), spawned the hit single "I'm So Hood" (featuring T-Pain, Trick Daddy, Rick Ross and Plies). His two subsequent releases—*We Global* (2008) and *Victory* (2010)—both peaked within the top ten of the *Billboard* 200; the latter was supported by the single "All I Do Is Win" (featuring T-Pain, Ludacris, Snoop Dogg and Rick Ross), which received triple platinum certification by the Recording Industry Association of America (RIAA).

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

Mehmet Ülger (Pınarbaşı (Kayseri), 1 februari 1962 – Rotterdam, 27 november 2017) was een Nederlands journalist en documentairemaker.
Loopbaan
Hij studeerde aan de Academie voor de Journalistiek in Tilburg en werkte sinds midden jaren negentig als journalist voor tv-actualiteitenrubrieken, tijdschriften en kranten, waaronder Netwerk, EenVandaag, KRO Spoorloos, NOVA, Zembla, het ANP, Trouw, Contrast, Wordt Vervolgd, De Humanist, De Groene Amsterdammer, de Volkskrant en Onze Wereld.
Ülger was gespecialiseerd in Turkije, de islam, allochtonen in Nederland en Turks nationalisme. Hij deed achtergrondonderzoek en werkte soms undercover. Met Stella Braam schreef hij Grijze Wolven : een zoektocht naar Turks extreem-rechts. Kort na publicatie van het boek in 1997 werden de schrijvers met de dood bedreigd en moesten ze onderduiken.
Op 7 januari 2015 werd Ülger korte tijd vastgehouden in Istanboel. Hij werd verhoord door de politie, de reden was dat hij in september 2013 tegen de regels

Pandrasus

SIGN IN TO EDIT

Pandrasus was a Greek King.

In 789 BC, the Latin exile Brutus arrived in Pandrasus' territory and staged a slave revolt of 400 Trojan slaves. While the freed slaves fought Pandrasus' men, Brutus took the king hostage and demanded that he and the slaves be given ships and supplies to escape the region. Pandrasus, capitulating to Brutus' demands, gave one of his daughters, Innogen as a wife, as a sign of good faith.

After his daughter was wed with Brutus, the Latin exile left the Greek territory with Innogen and the freed Trojans.

Pandrasus	
Biographical Information	
Homeland	Greece
Born	845 BC
Physical Information	
Ethnicity	Mediterranean

Died	Jan. 12, 1665 Castres, France
Nationality	French

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

Work in Mathematics

In 1630, Pierre bought a counsellor's office at Parlement de Toulouse and was sworn in by Grand Chambre in 1631. Pierre worked at this high court for the rest of his life. He rose through the ranks at the criminal court, reaching up to the highest post in 1652. Pierre was fluent in multiple languages, including French, Latin, Greek, Occitan, Spanish and Italian. Pierre shared his work with his friends and fellow mathematicians through letters. However, he would often not provide proof for his theorems. This allowed Pierre to retain the tag of amateur while he could still gain recognition he wanted.

Pierre had a close encounter with death in the early 1650s when a plague gripped the town of Beaumont-de-Lomagne. Many people died in that plague and even Pierre was badly impacted. In fact, in 1653, he was wrongly reported as dead when he was suffering from plague. However, Pierre survived that phase and went on to continue his duties at the court. Pierre died in 1665 in Castres, Tarn.

Contributions to Mathematics

Fermat is considered one of the greatest French mathematicians of the 17th Century. He made contributions to every field of mathematics that existed during his era. He explored the mathematical areas, including analytical geometry, infinite descent, and pre-evolved calculus. He considered mathematics to be a hobby, which is why he never published his work.

Fermat's greatest ideas are in the area of number theory, which is the purest form of mathematics involving the study of whole numbers and the relationships between them. Fermat became particularly famous for his Fermat's Last Theorem. According to this theorem, x to the power n + y to the power n = z to the power n

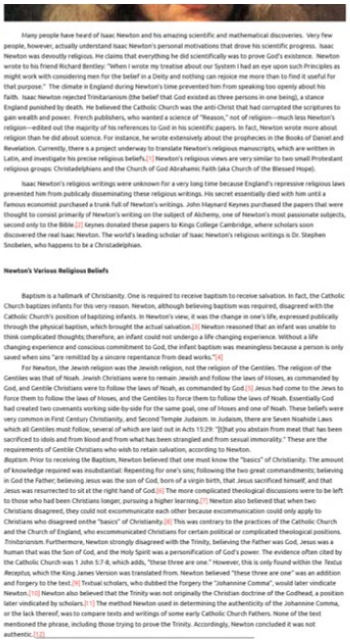
On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and I do not know of a more severe Idolatry, than that a woman should say Jesus is her Lord although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.



Many people have heard of Isaac Newton and his amazing scientific and mathematical discoveries. Very few people, however, actually understand Isaac Newton's personal motivations that drove his scientific progress. Isaac Newton was devoutly religious. He claims that everything he did scientifically was to prove God's existence. Newton wrote to his friend Richard Bentley: "when I wrote my treatise about our System I had an eye upon such Principles as might work with considering men for the belief in a Deity and nothing can rejoice me more than to find it useful for that purpose." The climate in England during Newton's time prevented him from speaking too openly about his faith. Isaac Newton rejected Trinitarianism (the belief that God existed as three persons in one being), a stance England punished by death. He believed the Catholic Church was the anti-Christ that had corrupted the scriptures to gain wealth and power. French publishers, who wanted a science of "Reason," not of religion—much less Newton's religion—edited out the majority of his references to God in his scientific papers. In fact, Newton wrote more about religion than he did about science. For instance, he wrote extensively about the prophecies in the Books of Daniel and Revelation. Currently, there is a project underway to translate Newton's religious manuscripts, which are written in Latin, and investigate his precise religious beliefs.[1] Newton's religious views are very similar to two small Protestant religious groups: Christadelphians and the Church of God Abrahamic Faith (aka Church of the Blessed Hope).
Isaac Newton's religious writings were unknown for a very long time because England's repressive religious laws prevented him from publically disseminating these religious writings. His secret essentially died with him until a famous economist purchased a trunk full of Newton's writings. John Maynard Keynes purchased the papers that were thought to consist primarily of Newton's writing on the subject of Alchemy, one of Newton's most passionate subjects, second only to the Bible.[2] Keynes donated these papers to Kings College Cambridge, where scholars soon discovered the real Isaac Newton. The world's leading scholar of Isaac Newton's religious writings is Dr. Stephen Snobelen, who happens to be a Christadelphian.
Newton's Various Religious Beliefs
Baptism is a hallmark of Christianity. One is required to receive baptism to receive salvation. In fact, the Catholic Church baptizes infants for this very reason. Newton, although believing baptism was required, disagreed with the Catholic Church's position of baptizing infants. In Newton's view, it was the change in one's life, expressed publically through the physical baptism, which brought the actual salvation.[3] Newton reasoned that an infant was unable to think complicated thoughts; therefore, an infant could not undergo a life changing experience. Without a life changing experience and conscious commitment to God, the infant baptism was meaningless because a person is only saved when sins "are remitted by a sincere repentance from dead works."[4]
For Newton, the Jewish religion was the Jewish religion, not the religion of the Gentiles. The religion of the Gentiles was that of Noah. Jewish Christians were to remain Jewish and follow the laws of Moses, as commanded by God, and Gentile Christians were to follow the laws of Noah, as commanded by God.[5] Jesus had come to the Jews to force them to follow the laws of Moses, and the Gentiles to force them to follow the laws of Noah. Essentially God had created two covenants working side-by-side for the same goal, one of Moses and one of Noah. These beliefs were very common in First Century Christianity, and Second Temple Judaism. In Judaism, there are Seven Noahide Laws which all Gentiles must follow, several of which are laid out in Acts 15:29: "[t]hat you abstain from meat that has been sacrificed to idols and from blood and from what has been strangled and from sexual immorality." These are the requirements of Gentile Christians who wish to retain salvation, according to Newton.
Baptism. Prior to receiving the Baptism, Newton believed that one must know the "basics" of Christianity. The amount of knowledge required was insubstantial: Repenting for one's sins; following the two great commandments; believing in God the Father; believing Jesus was the son of God, born of a virgin birth, that Jesus sacrificed himself, and that Jesus was resurrected to sit at the right hand of God.[6] The more complicated theological discussions were to be left to those who had been Christians longer, pursuing a higher learning.[7] Newton also believed that when two Christians disagreed, they could not excommunicate each other because excommunication could only apply to Christians who disagreed on the "basics" of Christianity.[8] This was contrary to the practices of the Catholic Church and the Church of England, who excommunicated Christians for certain political or complicated theological positions. Trinitarianism. Furthermore, Newton strongly disagreed with the Trinity, believing the Father was God, Jesus was a human that was the Son of God, and the Holy Spirit was a personification of God's power. The evidence often cited by the Catholic Church was 1 John 5:7-8, which adds, "these three are one." However, this is only found within the Textus Receptus, which the King James Version was translated from. Newton believed "these three are one" was an addition and forgery to the text.[9] Textual scholars, who dubbed the forgery the "Johannine Comma", would later vindicate Newton.[10] Newton also believed that the Trinity was not originally the Christian doctrine of the Godhead, a position later vindicated by scholars.[11] The method Newton used in determining the authenticity of the Johannine Comma, or the lack thereof, was to compare texts and writings of some early Catholic Church Fathers. None of the text mentioned the phrase, including those trying to prove the Trinity. Accordingly, Newton concluded it was not authentic.[12]

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

Gandour
From Wikipedia, the free encyclopedia
This article is about the food processing company. For other uses, see Ghandour.
Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.
A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]
Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

JUSTUS-LIEBIG-UNIVERSITÄT GIESSEN

Rudolf Buchheim Institute of Pharmacology

About Us | Research

History

In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Seltersberg, where he started doing researches in an experimental way as the leadoff pharmacologist.

Rudolf Buchheim

Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.

Contribution to the festschrift 'The medical faculty of the university Giessen'

Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of **khanacademy.org** is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

Sal Khan

Article | Talk | Read | Edit | View history | Tools

From Wikipedia, the free encyclopedia

Checked

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of Time 100.[4] In the same year, he was featured on the cover of Forbes, with the tagline "The $1 Trillion Opportunity."[5]

Early life and family [edit]

Khan was born in Metairie, Louisiana, on October 11, 1976, into a Bengali Muslim family.[6] His father Fakhrul Amin Khan (d. 1990) was a physician,[7][8] originally hailing from the village of Rahmatpur in Babuganj Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India.[9][10] He grew up in a state of

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 | Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Boolean Algebra: The Logic Behind the Computers

June 25, 2024 | Mathematics | 0 comments

In today's fast-moving tech world, computers are everywhere. We often forget the powerful logic they run on. Every computer depends on **Boolean algebra**, a core part of its operation. This article will explain how **Boolean algebra** shapes the digital world we live in.

A computer programmer might need to design

President Donald Trump had demanded the release of all the remaining hostages in a warning to Hamas last month before supporting Israel's resumption of military airstrikes. The war in Gaza has devastated the territory since the Hamas attack on Israel in October 2023.

Israeli hostage Tal Shoham is escorted by Hamas fighters before being handed over to the Red Cross in Rafah, southern Gaza Strip, on Saturday, Feb. 22, 2025. JEHAD ALSHRAFI/AP PHOTO

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

Bin Laden claims responsibility for 9/11

CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004

Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.

- INDEPTH: **Remembering September 11**

The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

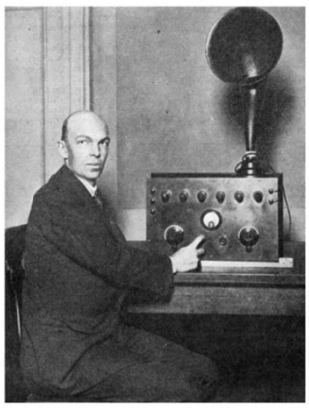
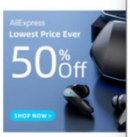
Edwin H Armstrong – The Pioneer of Radio Communication





Edwin H Armstrong – the man who developed Radio Technology and is best known for advancing the FM radio. The legend has as many as 42 patents on his name and numerous prestigious awards. Let's find out how a little guy from Manhattan became such a prolific inventor.

LEMELSON-MIT

Edwin Armstrong
FM Radio

COMPUTING AND TELECOMMUNICATIONS

Edwin Howard Armstrong, the "father of FM radio," was born on December 18, 1890 in New York City. He grew up in Yonkers, New York and knew by the age of fourteen that he wanted to become an inventor. He began tinkering with homemade wireless gadgets as a teenager, and as a high school student, he built an antenna mast on his family's front lawn to study wireless technology. He quickly identified a problem: there was no device in existence that could amplify weak signals at the receiving end of a communications transmission, nor was there a way to provide stronger power at the sending end. After he finished high school, he entered Columbia University's School of Engineering where he pursued his wireless studies further.

During his third year at Columbia, Armstrong came up with his first major invention: the first radio amplifier. He had learned how Lee DeForest's radio tube worked; then he redesigned it by taking the electromagnetic waves that came from a radio transmission and repeatedly feeding the signal back through the tube. Each time, the signal's power would increase as much as 20,000 times a second. This phenomenon, which Armstrong called "regeneration," was an extremely important discovery in the early days of radio. With this development, radio engineers no longer needed 20-ton generators to get their stations on the air. Armstrong's single-circuit design provided the key to the continuous-wave transmitter that is at the core of radio operations today. He graduated with his bachelor's degree in Engineering in 1913. He patented his creation and licensed it to the Marconi Corporation in 1914.

Edwin Howard Armstrong (December 18, 1890 – January 31, 1954) was an American electrical engineer and inventor. He has been called 'the most prolific and influential inventor in radio history'. He invented the regenerative circuit while he was an undergraduate and patented it in 1914, followed by the super-regenerative circuit in 1922, and the superheterodyne receiver in 1918. Armstrong was also the inventor of modern frequency modulation (FM) radio transmission. Armstrong was born in New York City, New York, in 1890. He studied at Columbia University. He later became a professor at Columbia

Doctor killed near Gaza hospital, Israeli forces in S Lebanon

Palestinians have said the bombing in the north is "getting worse every day" for the estimated 65,000 people living there.

MENA 15 min read

The New Arab Staff | 29 November, 2024

A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.

Dr Ahmed Ziad Al-Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.

Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

Name

Halima Abdul Kareem Al-Kahlout

Age

28 years old

Martyr Date

October 29, 2023

The martyr Halima Abdul Kareem Al-Kahlout, 28 years old.

Halima was a Palestinian artist known for her strong presence in art exhibitions. She earned an artistic title in arts from Al-Aqsa University and was recognized for her unique perspective on life reflected in her artwork.

Halima worked as an art facilitator with the Palestinian Ministry of Culture and collaborated with various art centers.

Her untimely death prevented her from completing paintings depicting life difficulties in Gaza under siege. Her loss left a significant void, and she is deeply missed by those who knew her and appreciated her artistic contributions.

On 29/10/2023 , she was martyred along with family members due to Israeli rocket shrapnel hitting Gaza city.

Pentagon releases names of 3 soldiers killed in drone attack in Jordan
By Eleanor Watson
Updated on: January 30, 2024 / 12:54 AM EST / CBS News
The Pentagon announced the names of the three American service members who were killed in an unmanned aerial drone attack on a base in northeast Jordan on Sunday.
In a press release Monday, the Defense Department said Sgt. William Jerome Rivers, 46, of Carrollton, Georgia; Spc. Kennedy Ladon Sanders, 24, of Waycross, Georgia and Spc. Breonna Alexsondria Moffett, 23, of Savannah, Georgia, died Jan. 28, 2024, in Jordan. The attack occurred when "a one-way unmanned aerial system (OWUAS) impacted their container housing units," the Pentagon said.
Sgt. William Jerome Rivers, Spc. Kennedy Ladon Sanders and Spc. Breonna Alexsondria Moffett died Jan. 28, 2024, in Jordan.
DEFENSE DEPARTMENT
Spc. Moffett's mother, Francine Moffett, released a statement saying, "Breonna was a very smart, beautiful young woman. She love to laugh, she

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

DRONE STUDIO NE
Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

DRONE STUDIO NE
Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

CATHOLIC SCIENTIST OF THE PAST
René-Just Haüy
FEBRUARY 28, 1743 TO JUNE 3, 1822
René-Just Haüy (February 28, 1743 – June 3, 1822) Haüy was a French priest and mineralogist, sometimes referred to as the "father of modern crystallography." Haüy developed a theory of crystal shapes based on the idea that crystals are made up of fundamental units, which he called "integrant molecules," arranged in a lattice that is periodic in three directions. He showed that by assuming the number of molecules in successive layers changed by constant increments he could explain all the angles that crystal faces made with each other. The mathematical rule he derived was essentially equivalent to what is now called the "law of simple rational intercepts," which is the fundamental law of geometric crystallography. He gave a systematic classification of all then-known minerals by their geometric properties. Haüy's ideas were very influential and their validity and physical basis were eventually established in the early twentieth century by use of X-ray diffraction. During the French Revolution, Haüy refused, as a faithful priest, to take an oath accepting the Civil Constitution of the Clergy, a law by which the revolutionary government took control of the Catholic Church. For this he was thrown into jail, but managed to survive the September Massacres, in which many Catholic clergy were put to death.

Khalil al-Hayya (Arabic: خليل الحية; born 5 November 1960) is a Palestinian politician who served as the deputy chairman of the Hamas Political Bureau from August to October 2024, succeeding deceased Saleh al-Arouri. He is now serving as one of the acting quinquevirate leadership of Hamas alongside Khaled Mashal, Zaher Jabarin, Muhammad Ismail Darwish, and an unnamed Hamas official, after Yahya Sinwar was killed by the IDF in October 2024. He also was elected to the Palestinian Legislative Council since January 2006 as a representative of Gaza City.
Early life and education
Al-Hayya received his Bachelor of Arts (BA) from Islamic University of Gaza, Master of Arts (MA) in Hadith from University of Jordan and Doctor of Philosophy (PhD) from University of the Holy Qur'an and Islamic Sciences. He joined Hamas after finished his bachelor's degree during the First Intifada. He worked part time as a teacher at that time.
Political career
Al-Hayya has been a Hamas official for decades.[2] He was regarded a close associate of former Hamas leader Yahya Sinwar,[3] and has been described as "one of the few people whom Sinwar felt he could rely on."[4]

From Wikipedia, the free encyclopedia
Berth Milton Sr. (26 November 1926 – 31 December 2005) was a Swedish pornographer and businessman. He is known for his creation of Private, the first full-color hardcore pornographic magazine, in 1965. Later, he went on to build one of the most renowned brand names in modern pornography. He was the father of Berth Milton Jr., the current majority owner and former CEO of Private Media Group, the company that now publishes the magazine and other properties under the Private brand.

where are the children used by Jens and Peter Theander [edit]
They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.
This company [edit]
This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

From Wikipedia, the free encyclopedia
Coordinates: 21.4212°N 39.8726°E
The Stoning of the Devil (Arabic: رمي الجمرات ramy al-jamarāt, lit. "throwing of the jamarāt [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called jamarāt, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.
A Stoning of the Devil from 1942
On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.
Some pilgrims stay at Mina for an additional day, in which case they must again store each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.
Replacement of the pillars [edit]
Until 2004, the three jamarāt (singular: jamrah) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the jamarāt, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

For other uses, see Mecca (disambiguation).
Mecca (/ mɛkə/; officially Makkah al-Mukarramah,[a] commonly shortened to Makkah[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[8] Pilgrims more than triple the population number every year during the Hajj pilgrimage, observed in the twelfth Hijri month of Dhū-Ḥijjah.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]
Mecca is generally considered "the fountainhead and cradle of Islam",[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the Jabal al-Nur ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the Hajj is an obligation upon all able

CARL FRIEDRICH GAUSS – The Prince of Mathematics
Biography
Muhammad Ghaus Tomb: Gwalior's Lesser Known Gem
Carl Friedrich Gauss
7 August 2023 / 9 February 2025 by Charlton C
Carl Friedrich Gauss (1777-1855), the Father of Arithmetic Progression, was a German child genius who went on to become one of the greatest mathematicians of all time, and thanks to him we can now easily find the sum of an arithmetic sequence.
Daniel C, Aarav S
His life
Carl Friedrich Gauss was born in 1777 in the city of Brunswick into a lower class family. His father would work many different jobs just to make ends meet, and his mother was illiterate. However, this didn't stop him from becoming a renowned mathematician, astronomer and

Carl Friedrich Gauss
Carl Friedrich Gauss
Early Life
Carl Friedrich Gauss was a multi-talented person. He was scientist, who worked in various fields including number theory, statistics, analysis, differential geometry and geophysics, electrostatics, astronomy and geodesy but he excelled most in the field of mathematics. Due to his impressive contributions and portrayal of pure brilliance in the subject he is known as the 'Prince of mathematics' and the 'Greatest Mathematician since Antiquity'. This great mathematician was born on 30th April 1777 in Braunschweig-Wolfenbüttel, Germany. Son of Gebhard Dietrich Gauss, who was a gardener and a brick layer and mother Dorothea Gauss, who was the daughter of a stonecutter; a very simple and uneducated family. Gauss showed immense aptitude for mathematics since the start of his education.

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

Overview
Test Series
Father of Graph Theory – Leonhard Euler, an 18th-century Swiss mathematician, physicist and astronomer, is recognized as the Father of Graph Theory. Born on April 15, 1707, in Basel, Switzerland, Euler made groundbreaking contributions that revolutionized the field of Mathematics. Euler's most notable contribution came in the form of graph theory, a branch of mathematics concerned with the study of relationships between objects. In 1736, Euler tackled the famous problem known as the Seven Bridges of Königsberg, where he introduced the concept of a graph and developed the fundamental theorem of graph theory. His solution to the problem laid the foundation for the field and established him as the pioneer of graph theory.
Father of Graph Theory
Leonhard Euler, an 18th-century Swiss mathematician, is often regarded as the "Father of Graph Theory." In 1736, Euler

"Euler" redirects here. For other uses, see Euler (disambiguation).
Leonhard Euler (/ˈɔɪlər/ OY-lər;[b] German: [ˈleːɔnhaʁt ˈɔʏlɐ] ⓘ, Swiss Standard German: [ˈleːonhard ˈɔʏlər]; 15 April 1707 – 18 September 1783) was a Swiss polymath who was active as a mathematician, physicist, astronomer, logician, geographer, and engineer. He founded the studies of graph theory and topology and made influential discoveries in many other branches of mathematics, such as analytic number theory, complex analysis, and infinitesimal calculus. He also introduced much of modern mathematical terminology and notation, including the notion of a mathematical function.[6] He is known for his work in mechanics, fluid dynamics, optics, astronomy, and music theory.[7] Euler has been called

From Wikipedia, the free encyclopedia

This article is about the food processing company. For other uses, see Ghandour.

Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.

A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]

Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

Dr. Rafiuddin Ahmed (1890-1965) was born on December 24, 1890, in Bardhanpara, East Bengal, India. He graduated from Aligarh Muslim University in 1908. By the next year, he left for the United States by working his passage over.He enrolled in the University of Iowa School of Dentistry, earning his dental degree in 1915. Dr. Ahmed then worked in the Forsyth Dental Infirmary for Children in Boston, Massachusetts, until 1918. In 1919, he returned to India to open a dental practice in Calcutta.
In 1920, Dr. Ahmed founded the First Dental College of India, which was financed by starting the New York Soda Fountain in Calcutta. Dr. Ahmed published the First Student's Handbook on Operative Dentistry in 1928.

Rudolf Buchheim Institute of Pharmacology
About Us
Research
History
In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Selterstor, where he started doing researches in an experimental way as the leadoff pharmacologist.
Rudolf Buchheim
Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.
Contribution to the festschrift "The medical faculty of the university Giessen"
Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

The World's 100 Most Influential People: 2012

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an ever-growing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The inspiration of khanacademy.org is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

Sal Khan

Sal Khan

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science. He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times. In 2012, Khan was named in the annual publication of Time 100, in the same year, he was featured on the cover of Forbes, with the tagline "The $1 Trillion Opportunity".

Early life and family

Khan was born in Metairie, Louisiana, on October 11, 1976, to a Bengali Muslim family. His father Fakrul Amin Khan (d. 1996) was a physician, originally hailing from the village of Ruhenajpur in Balurgaon Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India. He grew up in a state of

From Wikipedia, the free encyclopedia

Yoji Ito (伊藤 庸二, *Itō Yōji*, 5 March 1901[1]–9 May 1955[2]) was an engineer and scientist who had a major role in the Japanese development of magnetrons and the Radio Range Finder (RRF – the code name for a radar).

Early years [edit]

Yoji Ito was born and raised in Onjuku, then a fishing village in the Chiba Prefecture of Japan. His father was the primary schoolmaster and encouraged his children to achieve science and mathematics excellence. After graduating in electrical engineering from the Tokyo Imperial University, Ito was commissioned in the Imperial Navy and spent several years in assignments at sea.[3]

At the NTRI [edit]

Still in the Navy, Yoji Ito was sent to Germany for graduate study where he was a student of Heinrich Barkhausen at the Dresden Technische Hochschule. Upon completing his Doctor of Engineering degree there in 1929, he was promoted to the rank of Commander and assigned as a researcher at the Naval Technology Research Institute (NTRI) in the Meguro area of Tokyo. The NTRI had been formed in 1922, and was just becoming fully operational when Ito was sent there. Here first-rate scientists, engineers, and technicians were engaged in a wide variety of activities for advancing naval capabilities.[3]

At NTRI, Ito became involved with analyzing long-distance radio communications, and wanted to investigate the

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

impacts of its products.

Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Phillip Morris made were in 1854.

On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.

The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Bin Laden claims responsibility for 9/11
Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.
INDEPTH: Remembering September 11
The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

Edwin H Armstrong – The Pioneer of Radio Communication

Edwin H Armstrong – the man who developed Radio Technology and is best known for advancing the FM radio. The legend has as many as 42 patents on his name and numerous prestigious awards. Let's find out how a little guy from Manhattan became such a prolific inventor.

LEMELSON-MIT

Edwin Armstrong

FM Radio

COMPUTING AND TELECOMMUNICATIONS

Edwin Howard Armstrong, the "father of FM radio," was born on December 18, 1890 in New York City. He grew up in Yonkers, New York and knew by the age of fourteen that he wanted to become an inventor. He began tinkering with homemade wireless gadgets as a teenager, and as a high school student, he built an antenna mast on his family's front lawn to study wireless technology. He quickly identified a problem: there was no device in existence that could amplify weak signals at the receiving end of a communications transmission, nor was there a way to provide stronger power at the sending end. After he finished high school, he entered Columbia University's School of Engineering where he pursued his wireless studies further.

During his third year at Columbia, Armstrong came up with his first major invention: the first radio amplifier. He had learned how Lee DeForest's radio tube worked; then he redesigned it by taking the electromagnetic waves that come from a radio transmission and repeatedly feeding the signal back through the tube. Each time, the signal's power would increase as much as 20,000 times a second. This phenomenon, which Armstrong called "regeneration," was an extremely important discovery in the early days of radio. With this development, radio engineers no longer needed 20-ton generators to get their stations on the air. Armstrong's single-circuit design provided the key to the continuous-wave transmitter that is at the core of radio operations today. He graduated with his bachelor's degree in Engineering in 1913. He patented his creation and licensed it to the Marconi Corporation in 1914.

Edwin Howard Armstrong (December 18, 1890 – January 31, 1954) was an American electrical engineer and inventor. He has been called 'the most prolific and influential inventor in radio history'. He invented the regenerative circuit while he was an undergraduate and patented it in 1914, followed by the super-regenerative circuit in 1922, and the superheterodyne receiver in 1918. Armstrong was also the inventor of modern frequency modulation (FM) radio transmission. Armstrong was born in New York City, New York, in 1890. He studied at Columbia University. He later became a professor at Columbia

Sojourner Truth: How the Enslaved Woman of a Dutch-New York Famil
Became an Icon of America's Black Liberation Movement

by Jeroen Dewulf March 2

On 31 March 1817 the New York legislature decided that enslavement within its borders had to come to an e
Final emancipation would occur on 4 July 1827. Coincidentally, the date of choice was almost exactly two
centuries after the Dutch West India Company's yacht Bruynvisch arrived at Manhattan on 29 August 1627. T
ship transported the first group of enslaved Africans to New Amsterdam and thus introduced the institution
enslavement into what is now New York State. Among the first arrivals was Mayken van Angola, whose life w
the topic of an earlier blog in this series. One of the enslaved women emancipated two hundred years later w
Isabella Van Wagenen, better known under the name she choose for herself: Sojourner Truth.

It is little known that Sojourner Truth (c. 1797-1883), one of the icons of America's Black liberation movement, was a native speaker of Dutch. In her famous *Narrative* (1850), she identified herself as "the daughter of James and Betsey, slaves of one Colonel Ardinburgh, Hurley, Ulster County, New York," wh "belonged to that class of people called Low Dutch." The latter refers to descendants of seventeenth-century inhabitants of New Netherland, who remained in America after the English takeover in 1664. M of them held on to their Dutch identity for several generations. This was, in particular, the case in the H York Hudson Valley, where Peter Kalm, a Swedish traveler, observed in 1749 that almost all people "spo Dutch, have Dutch preachers, and divine service is performed in that language; their manners are likew quite Dutch."

One of the Dutch New Yorkers was Truth's owner Johannes Hardenbergh (1729-1799), whose grandfat also called Johannes Hardenbergh (1670–1745), provided the basis of the family's wealth by acquiring a tract of two million acres of land in the Catskill Mountains from the indigenous Esopus. The latter's son also called Johannes Hardenbergh (1706–1786), had added prestige to this wealth by serving as an offi under George Washington in the Continental Army and later joining New York's Colonial Assembly. The importance of the Dutch religion to the Hardenbergh family accounts for the fact that the latter was a founding trustee of Queen's College (today's Rutgers), the Dutch Reformed response to the founding o (Presbyterian) College of New Jersey (today's Princeton) and the (Episcopalian) King's College (today's Columbia).

With Hardenbergh in Hurley

The family's Christian zeal did not imply opposition to slavery. The 1790 census of the town of Hurley li Johannes Hardenbergh as the owner of seven enslaved people, which made him one of the largest slaveholders in the region. Among them were the parents of Sojourner Truth, then still called Belle, she for Isabella, who, born circa 1797, grew up in an entirely Dutch-speaking environment. Significantly, wh

"Black Peter" redirects here. For other uses, see Black Peter (disambiguation).
Not to be confused with Piet Zwart.

Zwarte Piet (Dutch: [zʋɑrtə ˈpit]; Luxembourgish: *Schwaarze Péiter*; West Frisian: *Swarte Pyt*; Indonesian: *Pit Hitam*), also known in English by the translated name **Black Pete**, is the companion of Saint Nicholas (Dutch: *Sinterklaas*; French: *Saint-Nicolas*; West Frisian: *Sinteklaas*; Luxembourgish: *Kleeschen*) in the folklore of the Low Countries. Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.[1][2]

The depiction of Zwarte Piet has gone through several changes since the mid 19th century. The earliest known illustration of the character comes from an 1850 book by Amsterdam schoolteacher Jan Schenkman and portrays him as a black Moor. This became the dominant representation of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character, since deemed a racial stereotype, usually put on blackface and colourful Renaissance attire in addition to curly wigs and bright red lipstick.[3]

This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed.[2] Alternatives later debuted, among them multicolored Piets. By 2021 a revised version, dubbed **Sooty Piet** (Dutch: *Roetveegpiet*), had become more common than the traditional variant at public events and in television specials, films, social media, and advertising.[4] Sooty Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

ho Discovered Arithmetic?
JULY 7, 2022
Asked by: Pietro Gusikowski V
1 Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in l
ime was that he got a very early start.
ho invented sequence in mathematics?
ber Abaci" first introduced the sequence to the Western world. But after a few
nt paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the
uence again. In fact, it was mostly forgotten until the 19th century, when
thematicians worked out more about the sequence's mathematical properties.
ho invented arithmetic and geometric sequence?
do know, however, that the Egyptians were the first to develop arithmetic math. Carl Gauss was born in 17
many. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he
there.

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

From Wikipedia, the free encyclopedia

Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born **Benjamin Carl Goldstein**;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.

Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL), a militant Jewish organization founded by his

From Wikipedia, the free encyclopedia

Berth Milton Sr. (26 November 1926 – 31 December 2005) was a Swedish pornographer and businessman. He is known for his creation of *Private*, the first full-color hardcore porrographic magazine, in 1965. Later, he went on to build one of the most renowned brand names in modern pornography. He was the father of Berth Milton Jr., the current majority owner and former CEO of Private Media Group, the company that now publishes the magazine and other properties under the *Private* brand.

where are the children used by Jens and Peter Theander [edit]

They were children used by the Theander brothers to be sexually abused in their films, they were born from 1958 to 1969. (People of the generation old Antonio Tano, and he himself is part of all this). We are talking about over a thousand children who are now 50 to 61 years old. Where are they? How can they be contacted? They are victims who should be compensated. Peter Theander is still alive, he must face the justice.

This company [edit]

This company produced a lot of kiddie porn in East Asian contries in the late '70 and '80. This was documented by the danish television channel TV2 in two reports on child pornography. NB. Kiddie porn was not explicitly outlawed in Denmark before 1985 so Color Climax probably did not break the law.

Carl Friedrich Gauss
Carl Friedrich Gauss
Early Life
Carl Friedrich Gauss was a multi-talented person. He was scientist, who worked in various fields including number theory, statistics, analysis, differential geometry and geophysics, electrostatics, astronomy and geodesy but he excelled most in the field of mathematics. Due to his impressive contributions and portrayal of pure brilliance in the subject he is known as the 'Prince of mathematics' and the 'Greatest Mathematician since Antiquity'. This great mathematician was born on 30th April 1777 in Braunschweig-Wolfenbuttel, Germany. Son of Gebhard Dietrich Gauss, who was a gardener and a brick layer and mother Dorothea Gauss, who was the daughter of a stonecutter, a very simple and uneducated family. Gauss showed immense aptitude for mathematics since the start of his education.

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Asım Orhan Barut[1]

Born	6 June 1926 Malatya, Turkey
Died	5 December 1994 (aged 68) Boulder, Colorado
Nationality	Turkish, American
Alma mater	Eidgenössische Technische Hochschule Zürich, Switzerland
Known for	Electrodynamics and classical theory of particles and fields, quantum field theory, elementary particles and group theory, Barut–Girardello coherent states
	Scientific career
Fields	High energy physics, quantum electrodynamics, and relativity

Pandrasus

SIGN IN TO EDIT

Pandrasus was a Greek King.

In 789 BC, the Latin exile Brutus arrived in Pandrasus' territory and staged a slave revolt of 400 Trojan slaves. While the freed slaves fought Pandrasus' men, Brutus took the king hostage and demanded that he and the slaves be given ships and supplies to escape the region. Pandrasus, capitulating to Brutus' demands, gave one of his daughters, Innogen as a wife, as a sign of good faith.

After his daughter was wed with Brutus, the Latin exile left the Greek territory with Innogen and the freed Trojans.

Stoning of the Devil

From Wikipedia, the free encyclopedia

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

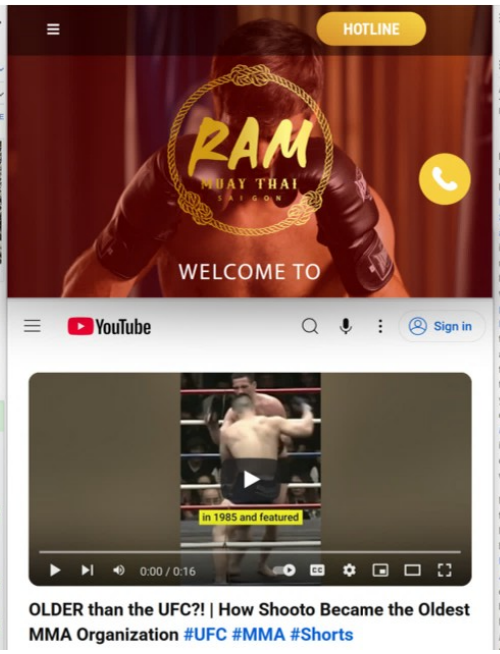
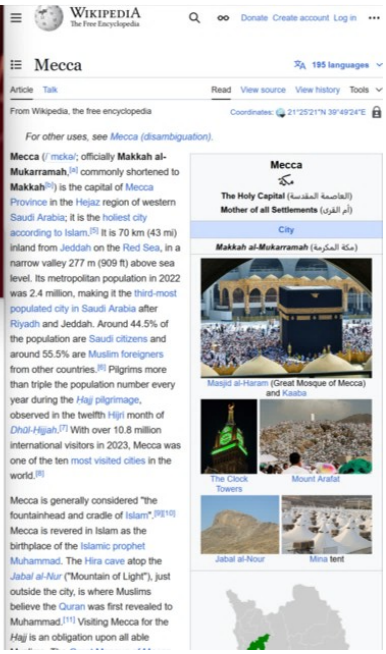
Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.





Mecca

From Wikipedia, the free encyclopedia

For other uses, see Mecca (disambiguation).

Mecca (/ mɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the *Hajj* pilgrimage, observed in the twelfth Hijri month of *Dhūl-Hijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able

Dr. Michael DeBakey, Father of Cardiac Surgery, Dies at 99

July 12, 2008 -- Considered the father of cardiac surgery, and by many the world's greatest surgeon, Michael E. DeBakey passed away on Friday night in Houston, just two months shy of his 100th birthday. Born in 1908 in Lake Charles, Louisiana to Lebanese-Christian immigrants, DeBakey invented numerous surgical procedures and techniques, as well as a host of devices that revolutionized vascular and cardiac surgery.

Israel has become increasingly involved in the world transplantation industry in the last decade. This comes a few years after India, which until the 1990s was the global center of the organ trade, enacted legislation prohibiting transplants using organs acquired from living people.

According to a 2015 European Parliament report, Israeli physicians and patients played a major role in the international organ trade, initially

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 | Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."

- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer

George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.

The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jeremy Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.

Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.

The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Demystifying the Genius of George Boole: Father of the Information Age

by Natalie Smith | February 9, 2025 | 8 min read |
Tech stuff & gadgets

George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

Author

Windsor, Rudolph R. 1935-

Smithsonian Libraries African Art Index Project DSI

The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.

The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Who is the Father of Mathematics?
Archimedes is known as the Father of Mathematics. Mathematics is one of the ancient sciences developed in time immemorial. A major topic of discussion regarding this particular field of science is about who is the father of mathematics.
Table of Contents

The Archimedes' screw, also known as the Archimedean screw, hydrodynamic screw, water screw or Egyptian screw,[1] is one of the earliest documented hydraulic machines. It was so-named after the Greek mathematician Archimedes who first described it around 234 BC, although the device had been developed in Egypt earlier in the century.[2] It is a reversible hydraulic machine that can be operated both as a pump or a power generator.

Guide to Jewish Genetic Diseases
Below are the 19 Ashkenazic Jewish genetic diseases for which people are most commonly screened. It is estimated that 1 in 5 Ashkenazic Jews is a carrier of a mutation in at least one of these disease genes:
Bloom Syndrome
Canavan Disease
Cystic Fibrosis
Familial Dysautonomia
Fanconi Anemia Type C
Gaucher Disease
Glycogen Storage Disease, Type 1a
Maple Syrup Urine Disease
Mucolipidosis IV (ML-IV)
Niemann-Pick Disease Type A
Tay-Sachs Disease
Walker-Warburg Syndrome
Screening is also available for the following diseases on a more limited basis:
Dihydrolipoamide Dehydrogenase Deficiency (DLD Deficiency)
Familial Hyperinsulinism
Joubert Syndrome
Nemaline Myopathy
Spinal Muscular Atrophy

CATHOLIC SCIENTIST OF THE PAST
René-Just Haüy
FEBRUARY 28, 1743 TO JUNE 3, 1822
René-Just Haüy (February 28, 1743 – June 3, 1822) Haüy was a French priest and mineralogist, sometimes referred to as the "father of modern crystallography." Haüy developed a theory of crystal shapes based on the idea that crystals are made up of fundamental units, which he called "integrant molecules," arranged in a lattice that is periodic in three directions. He showed that by assuming the number of molecules in successive layers changed by constant increments he could explain all the angles that crystal faces made with each other. The mathematical rule he derived was essentially equivalent to what is now called the "law of simple rational intercepts," which is the fundamental law of geometric crystallography. He gave a systematic classification of all then-known minerals by their geometric properties. Haüy's ideas were very influential and their validity and physical basis were eventually established in the early twentieth century by use of X-ray diffraction. During the French Revolution, Haüy refused, as a faithful priest, to take an oath accepting the Civil Constitution of the Clergy, a law by which the revolutionary government took control of the Catholic Church. For this he was thrown into jail, but managed to survive the September Massacres, in which many Catholic clergy were put to death.

From Wikipedia, the free encyclopedia
Khalil al-Hayya (Arabic: خليل الحية; born 5 November 1960) is a Palestinian politician who served as the deputy chairman of the Hamas Political Bureau from August to October 2024, succeeding deceased Saleh al-Arouri. He is now serving as one of the acting quinquevirate leadership of Hamas, alongside Khaled Mashal, Zaher Jabarin, Muhammad Ismail Darwish, and an unnamed Hamas official, after Yahya Sinwar was killed by the IDF in October 2024. He also was elected to the Palestinian Legislative Council since January 2006 as a representative of Gaza City.
Early life and education
Al-Hayya received his Bachelor of Arts (BA) from Islamic University of Gaza, Master of Arts (MA) in Hadith from University of Jordan and Doctor of Philosophy (PhD) from University of the Holy Quran and Islamic Sciences. He joined Hamas after finished his bachelor's degree during the First Intifada. He worked part time as a teacher at that time.
Political career
Al-Hayya has been a Hamas official for decades.[2] He was regarded a close associate of former Hamas leader Yahya Sinwar,[3] and has been described as "one of the few people whom Sinwar felt he could rely on."[4]
Following the 2006 Palestinian legislative

Abstract

The hominin record from southern Asia for the early Late Pleistocene epoch is scarce. Well-dated and well-preserved fossils older than ~45,000 years that can be unequivocally attributed to *Homo sapiens* are lacking[1,2,3,4]. Here we present evidence from the newly excavated Fuyan Cave in Daoxian (southern China). This site has provided 47 human teeth dated to more than 80,000 years old, and with an inferred maximum age of 120,000 years. The morphological and metric assessment of this sample supports its unequivocal assignment to *H. sapiens*. The Daoxian sample is more derived than any other anatomically modern humans, resembling

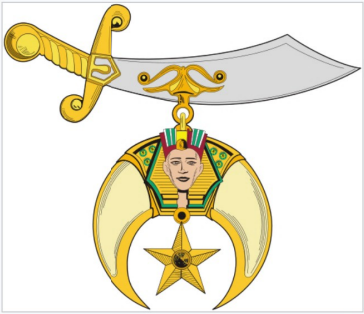
From Wikipedia, the free encyclopedia

"Shriner" and "Nobles of the Mystic Shrine" redirect here. For the surname, see Schreiner (disambiguation). For the march by John Philip Sousa, see Nobles of the Mystic Shrine (march).

Shriners International, formally known as the **Ancient Arabic Order of the Nobles of the Mystic Shrine** (**AAONMS**), is an American Masonic society. Founded in 1872 in New York City, it is headquartered in Tampa, Florida, and has over 200 chapters across nine countries, with a global membership of nearly 1.7 million "Shriners".[1] The organization is known for its colorful Middle Eastern theme, elaborate participation in parades and festivals, and the Shriners Children's network of nonprofit pediatric medical facilities.[2]



Logo of Shriners International

Shriners International describes itself as a global fraternity "based on fun, fellowship, and the Masonic principles of brotherly love, relief, and truth".[3] As an appendant body within Freemasonry, membership is open to men who have been initiated as Master Masons in a Masonic rite; various partner organizations accept women and youth.[4] Shriners are obliged to uphold the fraternity's mission and values, which include self-improvement, service and leadership to the community, and active involvement in social and philanthropic causes.[5]

Shriners International is recognizable for its Middle Eastern-inspired iconography, ceremonies, and motif: Shriners wear distinctive red fezzes as their official headgear, while fraternal regalia often features camels, pyramids, the Sphinx and other ancient Egyptian and Arabian symbols. The headquarters of local chapters, formally known as

y 1654: Pascal's Letters to Fermat on t "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

Jamal Ahmad Hamza Khashoggi
(/kəˈʃʊgdʒi, kəˈʃɒgdʒi/; Arabic: جمال أحمد حمزة خاشقجي, romanized: Jamāl ʾAḥmad Ḥamza Ḳāśuqǧiyy, Hejazi Arabic pronunciation: [dʒaˈmaːl xaːˈʃuɡ.(d)ʒi]; Modern Turkish: Cemal Ahmed Kaşıkçı; 13 October 1958 – 2 October 2018) was a Saudi journalist, dissident, author, columnist for Middle East Eye and The Washington Post, and a general manager and editor-in-chief of Al-Arab News Channel who was assassinated at the Saudi consulate in Istanbul on 2 October 2018 by agents of the Saudi government at the behest of Crown Prince Mohammed bin Salman.
Khashoggi served as editor for the Saudi Arabian newspaper Al Watan, turning it into a platform for Saudi progressives. Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter", and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman. He also opposed the Saudi Arabian-led intervention in Yemen.

Jeff Bezos phone hacking incident
1 language
From Wikipedia, the free encyclopedia
In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman. The Saudi Arabian embassy to the United States has denied the allegations. Billionaire Jeff Bezos, the owner of The Washington Post newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the National Enquirer reported details of Bezos's affair in January 2019. FTI Consulting did not link the National Enquirer to the hack. In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.

Saudi-led airstrikes on Yemen
4 languages
From Wikipedia, the free encyclopedia
Not to be confused with US-led airstrike campaign in Yemen.
A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm (Arabic: عملية عاصفة الحزم, romanized: ʿAmaliyyat ʿĀṣifat al-Ḥazm). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015. Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF). Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.
Many other civilians targets, including schools, and school buses in Yemen are also bombed by the Saudi-led coalition.
According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.
The UN accused the Saudi-led coalition of "complete disregard for human life".
Timeline
October 2015 - Saada airstrike
Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015 had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.

Carl Friedrich Gauss
Carl Friedrich Gauss
7 August 2023 / 9 February 2025 by Charlton C
Carl Friedrich Gauss (1777-1855), the Father of Arithmetic Progression, was a German child genius who went on to become one of the greatest mathematicians of all time, and thanks to him we can now easily find the sum of an arithmetic sequence.
Daniel C, Aarav S
His life
Carl Friedrich Gauss was born in 1777 in the city of Brunswick into a lower class family. His father would work many different jobs just to make ends meet, and his mother was illiterate. However, this didn't stop him from becoming a renowned mathematician, astronomer and

Dr. Rafiuddin Ahmed (1890-1965) was born on December 24, 1890, in Bardhanpara, East Bengal, India. He graduated from Aligarh Muslim University in 1908. By the next year, he left for the United States by working his passage over.He enrolled in the University of Iowa School of Dentistry, earning his dental degree in 1915. Dr. Ahmed then worked in the Forsyth Dental Infirmary for Children in Boston, Massachusetts, until 1918. In 1919, he returned to India to open a dental practice in Calcutta.
In 1920, Dr. Ahmed founded the First Dental College of India, which was financed by starting the New York Soda Fountain in Calcutta. Dr. Ahmed published the First Student's Handbook on Operative Dentistry in 1928.

About Us
Research
History
In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Seltersberg, where he started doing researches in an experimental way as the leadoff pharmacologist.
Rudolf Buchheim
Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.
Contribution to the festschrift 'The medical faculty of the university Giessen'
Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

Revolution Muslim (RM) was an organization based in New York City that advocated the establishment of a traditionalist Islamic state through the removal of the current rulers in Muslim-majority nations and an end to what they consider "Western imperialism". It was founded in 2007 by two American Muslim men: Jesse Curtis Morton and Yousef al-Khattab.

Salman Khan of Khan Academy

I have had the good fortune of speaking with good number of the leaders in education technology today. Since so many of these players have emerged from academe, the competition between companies is fierce certainly, but there is also a collegial willingness to acknowledge the successes of other companies. In the case of non-profits like edX, CEO Anant Agarawal says, the more companies that enter this space, the merrier. (Stay tuned for my interview with Agarwal on January 20th.) Several of these leaders acknowledge that the most influential person to the MOOC landscape has been Salman Khan. As Agarwal lists the genesis of the MOOCs, he lists Khan and his Khan Academy first among the major players. Sebastian Thrun acknowledged **in my interview with him** that "I stumbled into this after listening to a gentleman named Sal Khan of Khan Academy. In his speech he noted that he had tens of millions of students in his classes. I was teaching at Stanford at the time and had tens of dozens of students in my classes, and I felt I should try something different and see if we could do what I do and scale it to many people." In fact, **in my podcast interview with Thrun**, as he listed those who had been most influential to him over the course of his career, he listed Khan on the short list.

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of **khanacademy.org** is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

Checked

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of *Time* 100.[4] In the same year, he was featured on the cover of *Forbes*, with the tagline "The $1 Trillion Opportunity."[5]

Early life and family [edit]

Khan was born in Metairie, Louisiana, on October 11, 1976, into a Bengali Muslim family.[6] His father Fakhrul Amin Khan (d. 1990) was a physician,[7][8] originally hailing from the village of Rahmatpur in Babuganj Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India.[6][9] He grew up in a state of

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Demystifying the Genius of George Boole: Father of the Information Age
George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

From Wikipedia, the free encyclopedia
Yoji Ito (伊藤 庸二, Itō Yōji, 5 March 1901[1]–9 May 1955[2]) was an engineer and scientist who had a major role in the Japanese development of magnetrons and the Radio Range Finder (RRF – the code name for a radar).
Early years [edit]
Yoji Ito was born and raised in Onjuku, then a fishing village in the Chiba Prefecture of Japan. His father was the primary schoolmaster and encouraged his children to achieve science and mathematics excellence. After graduating in electrical engineering from the Tokyo Imperial University, Ito was commissioned in the Imperial Navy and spent several years in assignments at sea.[3]
At the NTRI [edit]
Still in the Navy, Yoji Ito was sent to Germany for graduate study where he was a student of Heinrich Barkhausen at the Dresden Technische Hochschule. Upon completing his Doctor of Engineering degree there in 1929, he was promoted to the rank of Commander and assigned as a researcher at the Naval Technology Research Institute (NTRI) in the Meguro area of Tokyo. The NTRI had been formed in 1922, and was just becoming fully operational when Ito was sent there. Here first-rate scientists, engineers, and technicians were engaged in a wide variety of activities for advancing naval capabilities.[3]
At NTRI, Ito became involved with analyzing long-distance radio communications, and wanted to investigate the

Object Details

Author
Windsor, Rudolph R. 1935-

Smithsonian Libraries African Art Index Project DSI

The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.

The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
By Peter High, Contributor.
Follow Author
This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

Bin Laden claims responsibility for 9/11

CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004

Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.

- INDEPTH: **Remembering September 11**

The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

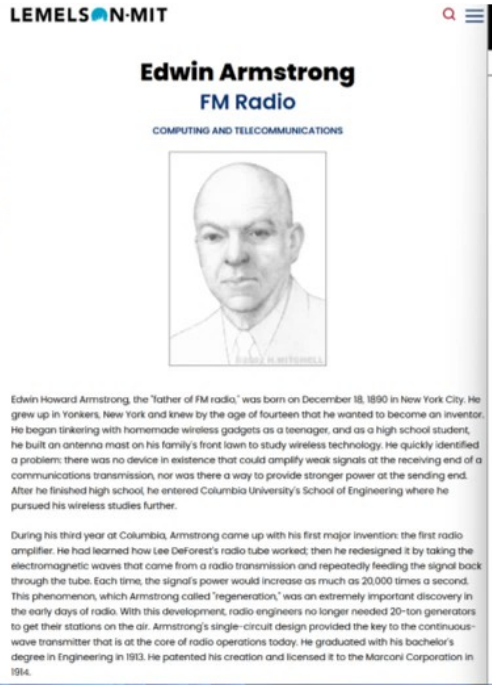
Edwin H Armstrong – The Pioneer of Radio Communication

Lowest Price Ever 50% Off

Edwin H Armstrong – the man who developed Radio Technology and is best known for advancing the FM radio. The legend has as many as 42 patents on his name and numerous prestigious awards. Let's find out how a little guy from Manhattan became such a prolific inventor.



LEMELSON·MIT

Edwin Armstrong

FM Radio

COMPUTING AND TELECOMMUNICATIONS

Edwin Howard Armstrong, the "father of FM radio," was born on December 18, 1890 in New York City. He grew up in Yonkers, New York and knew by the age of fourteen that he wanted to become an inventor. He began tinkering with homemade wireless gadgets as a teenager, and as a high school student, he built an antenna mast on his family's front lawn to study wireless technology. He quickly identified a problem: there was no device in existence that could amplify weak signals at the receiving end of a communications transmission, nor was there a way to provide stronger power at the sending end. After he finished high school, he entered Columbia University's School of Engineering where he pursued his wireless studies further.

During his third year at Columbia, Armstrong came up with his first major invention: the first radio amplifier. He had learned how Lee DeForest's radio tube worked; then he redesigned it by taking the electromagnetic waves that came from a radio transmission and repeatedly feeding the signal back through the tube. Each time, the signal's power would increase as much as 20,000 times a second. This phenomenon, which Armstrong called "regeneration," was an extremely important discovery in the early days of radio. With this development, radio engineers no longer needed 20-ton generators to get their stations on the air. Armstrong's single-circuit design provided the key to the continuous-wave transmitter that is at the core of radio operations today. He graduated with his bachelor's degree in Engineering in 1913. He patented his creation and licensed it to the Marconi Corporation in 1914.

Edwin Howard Armstrong (December 18, 1890 – January 31, 1954) was an American electrical engineer and inventor. He has been called 'the most prolific and influential inventor in radio history'. He invented the regenerative circuit while he was an undergraduate and patented it in 1914, followed by the super-regenerative circuit in 1922, and the superheterodyne receiver in 1918. Armstrong was also the inventor of modern frequency modulation (FM) radio transmission. Armstrong was born in New York City, New York, in 1890. He studied at Columbia University. He later became a professor at Columbia

N.J. man charged with possessing child pornography after tip from nonprofit group

Updated: Oct. 24, 2024, 3:56 p.m. | Published: Oct. 24, 2024, 3:45 p.m.

By Matthew Enuco | NJ Advance Media for NJ.com

An Ocean County man was charged with possessing child pornography after an investigation based on a tip from the National Center for Missing and Exploited Children, according to the county prosecutor's office.

Dennis Hubert, 42, of Brick Township was arrested Thursday at his home after a court-authorized search turned up several items of child pornography, authorities said.

Rudeness on the West Bank: Israelis and Palestinians Debate Images of Soldier and Child

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

From Wikipedia, the free encyclopedia
Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born Benjamin Carl Goldstein;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.
Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL), a militant Jewish organization founded by his

"Shriner" and "Nobles of the Mystic Shrine" redirect here. For the surname, see Schreiner (disambiguation). For the march by John Philip Sousa, see Nobles of the Mystic Shrine (march).

Shriners International, formally known as the **Ancient Arabic Order of the Nobles of the Mystic Shrine** (**AAONMS**), is an American Masonic society. Founded in 1872 in New York City, it is headquartered in Tampa, Florida, and has over 200 chapters across nine countries, with a global membership of nearly 1.7 million "Shriners".[1] The organization is known for its colorful Middle Eastern theme, elaborate participation in parades and festivals, and the Shriners Children's network of nonprofit pediatric medical facilities.[2]

Logo of Shriners International

Shriners International describes itself as a global fraternity "based on fun, fellowship, and the Masonic principles of brotherly love, relief, and truth".[3] As an appendant body within Freemasonry, membership is open to men who have been initiated as Master Masons in a Masonic rite; various partner organizations accept women and youth.[4] Shriners are obliged to uphold the fraternity's mission and values, which include self-improvement, service and leadership to the community, and active involvement in social and philanthropic causes.[5]

Carl Friedrich Gauss
Carl Friedrich Gauss
Early Life
Carl Friedrich Gauss was a multi-talented person. He was scientist, who worked in various fields including number theory, statistics, analysis, differential geometry and geophysics, electrostatics, astronomy and geodesy but he excelled most in the field of mathematics. Due to his impressive contributions and portrayal of pure brilliance in the subject he is known as the 'Prince of mathematics' and the 'Greatest Mathematician since Antiquity'. This great mathematician was born on 30th April 1777 in Braunschweig-Wolfenbüttel, Germany. Son of Gebhard Dietrich Gauss, who was a gardener and a brick layer and mother Dorothea Gauss, who was the daughter of a stonecutter; a very simple and uneducated family. Gauss showed immense aptitude for mathematics since the start of his education.

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

This article is about the food processing company. For other uses, see Ghandour.

Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.

A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]

Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

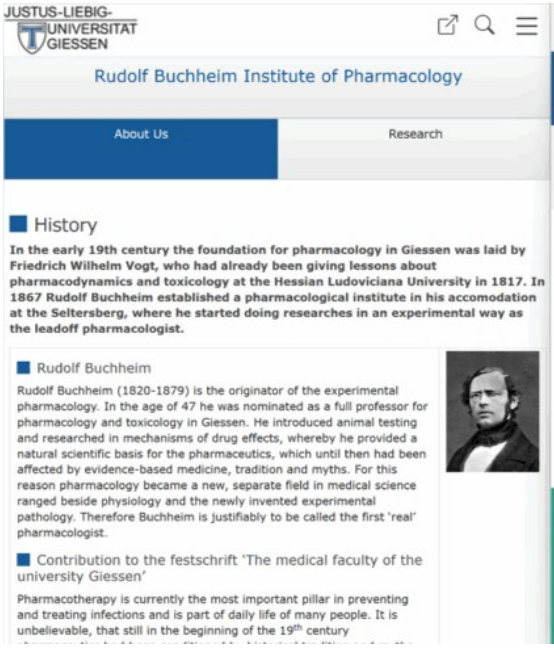
The Man Who Transformed Smiles: The Untold Story of India's Father of Dentistry
Dr. Rafiuddin Ahmed (1890–1965) is widely regarded as the "Father of Modern Dentistry in India." Born in Bardhanpara, Bengal, he laid the foundation for professional dentistry in the country during a time when the field was still in its infancy.
Early Life and Education



JUSTUS-LIEBIG-UNIVERSITÄT GIESSEN
Rudolf Buchheim Institute of Pharmacology
About Us
Research
History
In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Seltersberg, where he started doing researches in an experimental way as the leadoff pharmacologist.
Rudolf Buchheim
Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.
Contribution to the festschrift 'The medical faculty of the university Giessen'
Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

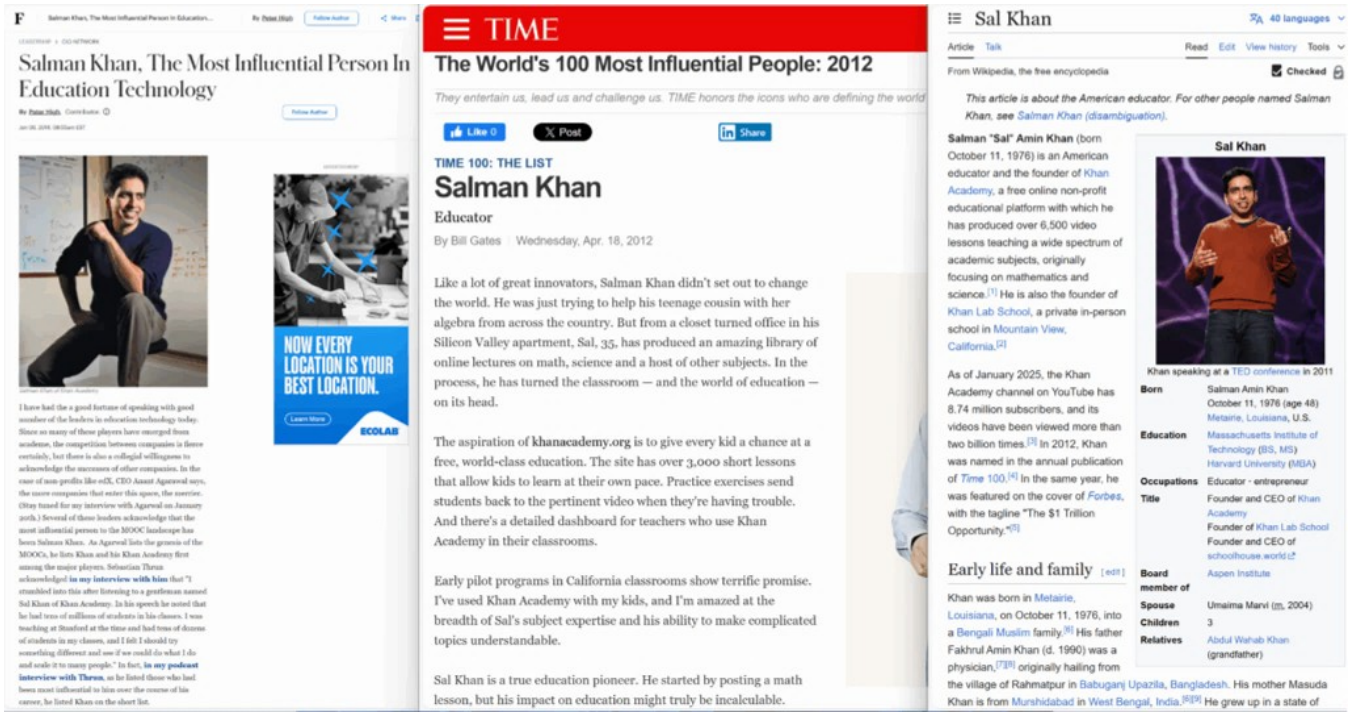
Salman Khan



Salman Khan, The Most Influential Person In Education Technology

I have had the a good fortune of speaking with good number of the leaders in education technology today. Since so many of these players have emerged from academe, the competition between companies is fierce certainly, but there is also a collegial willingness to acknowledge the successes of other companies. In the case of non-profits like edX, CEO Anant Agarwal says, the more companies that enter this space, the exercise. (Stay tuned for my interview with Agarwal on January 20th.) Several of these leaders acknowledge that the most influential person to the MOOC landscape has been Salman Khan. As Agarwal lists the genesis of the MOOCs, he lists Khan and his Khan Academy first among the major players. Sebastian Thrun acknowledged in my interview with him that "I stumbled into this after listening to a gentleman named Sal Khan of Khan Academy. In his speech he noted that he had tens of millions of students in his classes. I was teaching at Stanford at the time and had tens of dozens of students in my classes, and I felt I should try something different and see if we could do what I do and scale it to many people." In fact, in my podcast interview with Thrun, as he listed those who had been most influential to him over the course of his career, he listed Khan on the short list.

NOW EVERY LOCATION IS YOUR BEST LOCATION.

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of khanacademy.org is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

Sal Khan

From Wikipedia, the free encyclopedia

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of *Time* 100.[4] In the same year, he was featured on the cover of *Forbes*, with the tagline "The $1 Trillion Opportunity."[5]

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 | Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Boolean Algebra: The Logic Behind the Computers

June 25, 2024 | Mathematics | 0 comments

In today's fast-moving tech world, computers are everywhere. We often forget the powerful logic they run on. Every computer depends on **Boolean algebra**, a core part of its operation. This article will explain how **Boolean algebra** shapes the digital world we live in.

"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."

- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer

George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.

The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jeremy Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.

Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.

The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Augustin-Louis Cauchy
Augustin-Louis Cauchy
Early Life
Augustin-Louis Cauchy was a French mathematician born on 21st August 1789 in Paris, France. He laid the foundation for modern day analysis and did many significant works in the field of mathematics. His early schooling was from 'École Centrale du Panthéon' which was considered to be one of the best schools in Paris at the time. Cauchy was a brilliant student attaining high grades in all subjects including Latin and Humanities. Cauchy enrolled in the École Polytechnique to become an engineer and finished his studies at the institute in 1807. After Polytechnique he went to 'École des Ponts et Chaussées' (School for Bridges and Roads) to do civil engineering. Augustin-Louis Cauchy

This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

Muhammad Hussain Inoki (born Kanji Inoki, Inoki Kanji) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name Antonio Inoki. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.
Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.
In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.

Bin Laden claims responsibility for 9/11

CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004

Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.

- INDEPTH: **Remembering September 11**

The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

N.J. man charged with possessing child pornography after tip from nonprofit group

Updated: Oct. 24, 2024, 3:56 p.m. | Published: Oct. 24, 2024, 3:45 p.m.

By Matthew Enuco | NJ Advance Media for NJ.com

An Ocean County man was charged with possessing child pornography after an investigation based on a tip from the National Center for Missing and Exploited Children, according to the county prosecutor's office.

Dennis Hubert, 42, of Brick Township was arrested Thursday at his home after a court-authorized search turned up several items of child pornography, authorities said.

Abu Obaida (Al-Qassam)

From Wikipedia, the free encyclopedia

This article is about the spokesman for Hamas' military wing. For other uses, see Abu Ubaidah (disambiguation).

Abu Ubaida (Arabic: أبو عبيدة, romanized: *Abū ʿUbayda;* born February 11, 1985; also spelled **Abu Obaida**, **Abu Ubayda** and **Abu Ubaydah**), whose alleged real name is **Hudayfa Samir Abdallah al-Kahlout** (Arabic: حذيفة سمير عبدالله الكحلوت), is a Palestinian militant who has been the spokesperson for the Ezzedeen al-Qassam Brigades, the military wing of Islamic Resistance Movement, since at least 2007.

Abu Ubaida	
Native name	أبو عبيدة
Birth name	Hudayfa Samir Abdallah al-Kahlout (alleged by the United States)
Born	February 11, 1985 (age 40) Gaza City, Israeli-occupied Gaza Strip
Allegiance	Islamic Resistance Movement
Service / branch	Izz ad-Din al-Qassam Brigades
Years of service	2002–present
Rank	Spokesperson
Battles / wars	Second Intifada 2014 Gaza War Gaza war

Biography

According to Israeli media and the U.S. government, Abu Ubaida is Hudayfa Samir Abdallah al-Kahlout, born 11 February 1985, in Gaza.[1][2][3] Abu Ubaida first emerged in 2002, representing the Qassam Brigades to the media and at press conferences. After the Israeli disengagement from Gaza in 2005, he was officially appointed the spokesman for Al-Qassam.[4]

According to the United States, Abu Ubaida has been the spokesman of the Qassam Brigades since at least 2007.[2] He only appears wearing a keffiyeh covering his face.[1]

In 2014, Israeli media outlets released a photo, allegedly of Abu Ubaida. However, the validity of the photo and name were denied by the al-Qassam Brigades.[1]

In April 2024, United States Department of Treasury issued sanctions against Abu Ubaida and re-asserted his identity as al-Kahlout.[2][3]

Animation showing how Archimedes screws can generate power if they are driven by flowing fluid
The Archimedes' screw, also known as the Archimedean screw, hydrodynamic screw, water screw or Egyptian screw,[1] is one of the earliest documented hydraulic machines. It was so-named after the Greek mathematician Archimedes who first described it around 234 BC, although the device had been developed in Egypt earlier in the century.[2] It is a reversible hydraulic machine that can be operated both as a pump or a power generator.

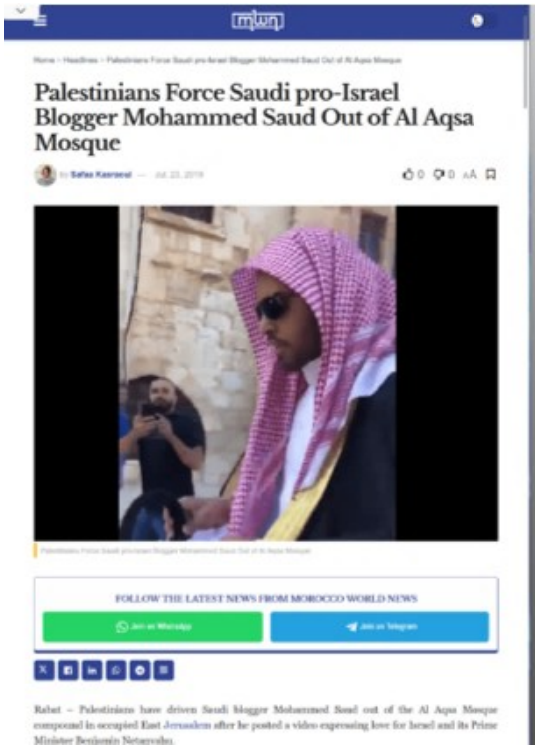
Pentagon releases names of 3 soldiers killed in drone attack in Jordan
By Eleanor Watson
Updated on: January 30, 2024 / 12:54 AM EST / CBS News
The Pentagon announced the names of the three American service members who were killed in an unmanned aerial drone attack on a base in northeast Jordan on Sunday.
In a press release Monday, the Defense Department said Sgt. William Jerome Rivers, 46, of Carrollton, Georgia; Spc. Kennedy Ladon Sanders, 24, of Waycross, Georgia and Spc. Breonna Alexsondria Moffett, 23, of Savannah, Georgia, died Jan. 28, 2024, in Jordan. The attack occurred when "a one-way unmanned aerial system (OWUAS) impacted their container housing units," the Pentagon said.
Sgt. William Jerome Rivers, Spc. Kennedy Ladon Sanders and Spc. Breonna Alexsondria Moffett died Jan. 28, 2024, in Jordan.
DEFENSE DEPARTMENT
Spc. Moffett's mother, Francine Moffett, released a statement saying, "Breonna was a very smart, beautiful young woman. She love to laugh, she



Palestinians Force Saudi pro-Israel Blogger Mohammed Saud Out of Al Aqsa Mosque

FOLLOW THE LATEST NEWS FROM MOROCCO WORLD NEWS

Rabat – Palestinians have driven Saudi blogger Mohammed Saud out of the Al Aqsa Mosque compound in occupied East Jerusalem after he posted a video expressing love for Israel and its Prime Minister Benjamin Netanyahu.

Rashomon on the West Bank: Israelis and Palestinians Debate Images of Soldier and Child

By Robert Mackey

Not much of what happened last Friday during a demonstration near the West Bank village of Nabi Saleh is in doubt. But in thousands of social media arguments since then, Israelis and Palestinians, and supporters of the two sides around the world, have interpreted one charged encounter in very different ways.

After a protest against Israel's military occupation became an exchange of tear gas and stones, an Israeli soldier tried to arrest a 12-year-old Palestinian boy, one arm in a sling, accused of hurling rocks.

The soldier was quickly set upon by five female protesters, as at

IDF announces deaths of 4 soldiers killed by explosive in Gaza City alleyway

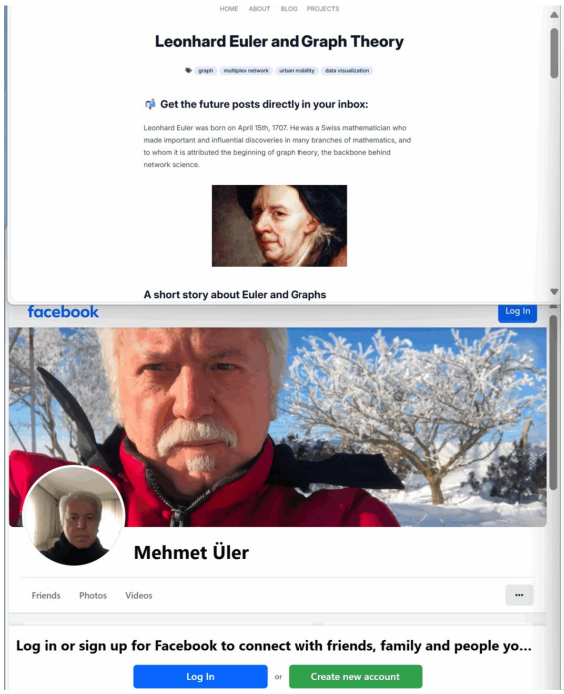
Four Israeli soldiers were killed during fighting against Hamas in Gaza City's Zeitoun neighborhood this morning, the military announces.

The troops are named as:

Sgt. Itay Livny, 19, of the Nahal Brigade's 931st Battalion, from Ramat Hasharon.

Sgt. Yosef Dassa, 19, of the Nahal Brigade's 931st Battalion, from Kiryat Bialik.

Sgt. Ermiyas Mekuriyaw, 19, of the Nahal Brigade's 931st Battalion, from Beersheba.



Leonhard Euler and Graph Theory

Get the future posts directly in your inbox:

Leonhard Euler was born on April 15th, 1707. He was a Swiss mathematician who made important and influential discoveries in many branches of mathematics, and to whom it is attributed the beginning of graph theory, the backbone behind network science.

A short story about Euler and Graphs

CATHOLIC SCIENTIST OF THE PAST
René-Just Haüy
FEBRUARY 28, 1743 TO JUNE 3, 1822
René-Just Haüy (February 28, 1743 – June 3, 1822) Haüy was a French priest and mineralogist, sometimes referred to as the "father of modern crystallography." Haüy developed a theory of crystal shapes based on the idea that crystals are made up of fundamental units, which he called "integrant molecules," arranged in a lattice that is periodic in three directions. He showed that by assuming the number of molecules in successive layers changed by constant increments he could explain all the angles that crystal faces made with each other. The mathematical rule he derived was essentially equivalent to what is now called the "law of simple rational intercepts," which is the fundamental law of geometric crystallography. He gave a systematic classification of all then-known minerals by their geometric properties. Haüy's ideas were very influential and their validity and physical basis were eventually established in the early twentieth century by use of X-ray diffraction. During the French Revolution, Haüy refused, as a faithful priest, to take an oath accepting the Civil Constitution of the Clergy, a law by which the revolutionary government took control of the Catholic Church. For this he was thrown into jail, but managed to survive the September Massacres, in which many Catholic clergy were put to death.

From Wikipedia, the free encyclopedia
Khalil al-Hayya (Arabic: خليل الحية; born 5 November 1960) is a Palestinian politician who served as the deputy chairman of the Hamas Political Bureau from August to October 2024, succeeding deceased Saleh al-Arouri. He is now serving as one of the acting quinquevirate leadership of Hamas, alongside Khaled Mashal, Zaher Jabarin, Muhammad Ismail Darwish, and an unnamed Hamas official, after Yahya Sinwar was killed by the IDF in October 2024. He also was elected to the Palestinian Legislative Council since January 2006 as a representative of Gaza City.
Early life and education
Al-Hayya received his Bachelor of Arts (BA) from Islamic University of Gaza, Master of Arts (MA) in Hadith from University of Jordan and Doctor of Philosophy (PhD) from University of the Holy Quran and Islamic Sciences. He joined Hamas after finished his bachelor's degree during the First Intifada. He worked part time as a teacher at that time.
Political career
Al-Hayya has been a Hamas official for decades.[2] He was regarded a close associate of former Hamas leader Yahya Sinwar,[3] and has been described as "one of the few people whom Sinwar felt he could rely on."[4]
Following the 2006 Palestinian legislative

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Asım Orhan Barut[1]

Born	6 June 1926 Malatya, Turkey

Shriners International, formally known as the **Ancient Arabic Order of the Nobles of the Mystic Shrine** (**AAONMS**), is an American Masonic society. Founded in 1872 in New York City, it is headquartered in Tampa, Florida, and has over 200 chapters across nine countries, with a global membership of nearly 1.7 million "Shriners".[1] The organization is known for its colorful Middle Eastern theme, elaborate participation in parades and festivals, and the Shriners Children's network of nonprofit pediatric medical facilities.[2]

Logo of Shriners International

Shriners International describes itself as a global fraternity "based on fun, fellowship, and the Masonic principles of brotherly love, relief, and truth".[3] As an appendant body within Freemasonry, membership is open to men who have been initiated as Master Masons in a Masonic rite; various partner organizations accept women and youth.[4] Shriners are obliged to uphold the fraternity's mission and values, which include self-improvement, service and leadership to the community, and active involvement in social and philanthropic causes.[5]

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

MAX BORN: THE REMARKABLE LIFE OF THE QUANTUM PIONEER

Nick | February 13, 2024

PHYSICISTS BIOGRAPHIES

Max Born was a towering figure in the world of physics, whose work helped shape our understanding of quantum mechanics, the theory that explains the behavior of matter and energy at the smallest scales. Born, a German-British physicist and mathematician, made significant contributions to several areas of science, including solid-state physics and optics. His influence extended beyond his own research through his role as a teacher and mentor to a generation of physicists who would go on to push the frontiers of the field even further.

Isaac Newton: The Father of Modern Science
FATHER OF MATHEMATICAL PHYSICS
KNOW WHO IS THE FATHER OF MATHEMATICAL PHYSICS!
Did Newton comment on Islam?
On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and I do not know of a more severe Idolatry, than that a woman should say Jesus is her Lord although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.

Stoning of the Devil

Coordinates: 21.4212°N 39.8728°E

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

The *jamarāt* are named (starting from the east):[5]

- the first *jamrah* (*al-jamrah al-'ūlā*), or the smallest *jamrah* (الجمرة الصغرى *al-jamrah aṣ-ṣughrā*),
- the middle *jamrah* (الجمرة الوسطى *al-jamrah al-wusṭā*),
- the largest *jamrah* (الجمرة الكبرى *al-jamrah al-kubrā*), or Jamrah of Aqaba (جمرة العقبة *jamrat al-ʿaqaba*).

For other uses, see Mecca (disambiguation).

Mecca (/ ˈmɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the *Hajj* pilgrimage, observed in the twelfth Hijri month of *Dhul-Hijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able Muslims. The Great Mosque of Mecca, known as the *Masjid al-Haram*, is home to the Ka'bah, believed by Muslims to have been built by Abraham and Ishmael. It is Islam's holiest site and the direction of prayer (*qibla*) for all Muslims worldwide.[12]

Muslim rulers from in and around the region long tried to take the city and keep it in their control, and thus, much like most of the Hejaz region, the city has seen several regime changes. The city was most recently conquered in the Saudi conquest of Hejaz by Ibn Saud and his allies in 1925. Since then, Mecca has seen a tremendous expansion in size and infrastructure, with newer, modern buildings such as the Abraj Al Bait, the world's fourth-tallest building and third-largest by floor area,[13] towering over the Great Mosque. The Saudi government has also carried out the destruction of several historical structures and archaeological sites,[14] such as the Ajyad Fortress.[15][16][17] However,

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

This article is about the food processing company. For other uses, see Ghandour.

Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.

A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]

Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

ECOLAB

Salman Khan of Khan Academy

I have had the a good fortune of speaking with good number of the leaders in education technology today. Since so many of these players have emerged from academe, the competition between companies is fierce certainly, but there is also a collegial willingness to acknowledge the successes of other companies. In the case of non-profits like edX, CEO Anant Agarawal says, the more companies that enter this space, the merrier. (Stay tuned for my interview with Agarwal on January 20th.) Several of these leaders acknowledge that the most influential person to the MOOC landscape has been Salman Khan. As Agarwal lists the genesis of the MOOCs, he lists Khan and his Khan Academy first among the major players. Sebastian Thrun acknowledged **in my interview with him** that "I stumbled into this after listening to a gentleman named Sal Khan of Khan Academy. In his speech he noted that he had tens of millions of students in his classes. I was teaching at Stanford at the time and had tens of dozens of students in my classes, and I felt I should try something different and see if we could do what I do and scale it to many people." In fact, **in my podcast interview with Thrun**, as he listed those who had been most influential to him over the course of his career, he listed Khan on the short list.

TIME 100: THE LIST

Salman Khan

Educator

By Bill Gates | Wednesday, Apr. 18, 2012

Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.

The aspiration of **khanacademy.org** is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.

Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.

Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.

Checked

This article is about the American educator. For other people named Salman Khan, see Salman Khan (disambiguation).

Salman "Sal" Amin Khan (born October 11, 1976) is an American educator and the founder of Khan Academy, a free online non-profit educational platform with which he has produced over 6,500 video lessons teaching a wide spectrum of academic subjects, originally focusing on mathematics and science.[1] He is also the founder of Khan Lab School, a private in-person school in Mountain View, California.[2]

As of January 2025, the Khan Academy channel on YouTube has 8.74 million subscribers, and its videos have been viewed more than two billion times.[3] In 2012, Khan was named in the annual publication of *Time* 100.[4] In the same year, he was featured on the cover of *Forbes*, with the tagline "The $1 Trillion Opportunity."[5]

Early life and family [edit]

Khan was born in Metairie, Louisiana, on October 11, 1976, into a Bengali Muslim family.[6] His father Fakhrul Amin Khan (d. 1990) was a physician,[7][8] originally hailing from the village of Rahmatpur in Eabuganj Upazila, Bangladesh. His mother Masuda Khan is from Murshidabad in West Bengal, India.[6][9] He grew up in a state of

Understanding Boolean Algebra: The Foundation of Digital Logic

August 3, 2024 | Shuvo

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Augustin-Louis Cauchy
Early Life
Augustin-Louis Cauchy was a French mathematician born on 21st August 1789 in Paris, France. He laid the foundation for modern day analysis and did many significant works in the field of mathematics. His early schooling was from 'École Centrale du Panthéon' which was considered to be one of the best schools in Paris at the time. Cauchy was a brilliant student attaining high grades in all subjects including Latin and Humanities. Cauchy enrolled in the École Polytechnique to become an engineer and finished his studies at the institute in 1807. After Polytechnique he went to 'École des Ponts et Chaussées' (School for Bridges and Roads) to do civil engineering. Augustin-Louis Cauchy

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
By Peter High, Contributor.

This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

From Wikipedia, the free encyclopedia
Not to be confused with American producer DJ Khalil, Algerian musician Khaled (musician) or American R&B singer Khalid (American singer).
Khaled Mohammed Khaled (/ kælɪd/; born November 26, 1975),[3] known professionally as DJ Khaled, is an American DJ and record producer. Originally a Miami-based radio personality, Khaled has since become known for enlisting high-profile music industry artists to perform on singles and albums, for which he often serves as producer and hype man. Known as the "Anthem King", his distinctions are his booming voice presence, "motivational" abstractions, maximalist production style and numerous catchphrases.[4]
Khaled was born in New Orleans, Louisiana, to Palestinian immigrant parents. He first gained recognition as a radio host in the 1990s for the radio station 99 Jamz, and translated his popularity by working with Fat Joe's hip hop collective, Terror Squad, as a DJ for their live performances and as a producer for the group. Following his production credits on the group's material,[5] Khaled enlisted several hip hop artists associated with the group and his native Miami to perform on his debut studio album, Listennn... the Album (2006). His second album, We the Best (2007), spawned the hit single "I'm So Hood" (featuring T-Pain, Trick Daddy, Rick Ross and Plies). His two subsequent releases—We Global (2008) and Victory (2010)—both peaked within the top ten of the Billboard 200; the latter was supported by the single "All I Do Is Win" (featuring T-Pain, Ludacris, Snoop Dogg and Rick Ross), which received triple platinum certification by the Recording Industry Association of America (RIAA).

impacts of its products.
Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Phillip Morris made were in 1854.
On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.
The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.
1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.
By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Edwin Armstrong

FM Radio

COMPUTING AND TELECOMMUNICATIONS

Edwin Howard Armstrong, the "father of FM radio," was born on December 18, 1890 in New York City. He grew up in Yonkers, New York and knew by the age of fourteen that he wanted to become an inventor. He began tinkering with homemade wireless gadgets as a teenager, and as a high school student, he built an antenna mast on his family's front lawn to study wireless technology. He quickly identified a problem: there was no device in existence that could amplify weak signals at the receiving end of a communications transmission, nor was there a way to provide stronger power at the sending end. After he finished high school, he entered Columbia University's School of Engineering where he pursued his wireless studies further.

During his third year at Columbia, Armstrong came up with his first major invention: the first radio amplifier. He had learned how Lee DeForest's radio tube worked; then he redesigned it by taking the electromagnetic waves that came from a radio transmission and repeatedly feeding the signal back through the tube. Each time, the signal's power would increase as much as 20,000 times a second. This phenomenon, which Armstrong called "regeneration," was an extremely important discovery in the early days of radio. With this development, radio engineers no longer needed 20-ton generators to get their stations on the air. Armstrong's single-circuit design provided the key to the continuous-wave transmitter that is at the core of radio operations today. He graduated with his bachelor's degree in Engineering in 1913. He patented his creation and licensed it to the Marconi Corporation in 1914.

Edwin Howard Armstrong (December 18, 1890 – January 31, 1954) was an American electrical engineer and inventor. He has been called 'the most prolific and influential inventor in radio history'. He invented the regenerative circuit while he was an undergraduate and patented it in 1914, followed by the super-regenerative circuit in 1922, and the superheterodyne receiver in 1918. Armstrong was also the inventor of modern frequency modulation (FM) radio transmission. Armstrong was born in New York City, New York, in 1890. He studied at Columbia University. He later became a professor at Columbia

Abu Obaida (Al-Qassam)

24 languages

From Wikipedia, the free encyclopedia

This article is about the spokesman for Hamas' military wing. For other uses, see Abu Ubaidah (disambiguation).

Abu Ubaida (Arabic: أبو عبيدة, romanized: *Abū ʿUbayda;* born February 11, 1985; also spelled **Abu Obaida**, **Abu Ubayda** and **Abu Ubaydah**), whose alleged real name is **Hudayfa Samir Abdallah al-Kahlout** (Arabic: حذيفة سمير عبدالله الكحلوت), is a Palestinian militant who has been the spokesperson for the Ezzedeen al-Qassam Brigades, the military wing of Islamic Resistance Movement, since at least 2007.

Abu Ubaida	
Native name	أبو عبيدة
Birth name	Hudayfa Samir Abdallah al-Kahlout (alleged by the United States)
Born	February 11, 1985 (age 40) Gaza City, Israeli-occupied Gaza Strip
Allegiance	Islamic Resistance Movement
Service / branch	Izz ad-Din al-Qassam Brigades
Years of service	2002–present
Rank	Spokesperson
Battles / wars	Second Intifada 2014 Gaza War Gaza war

Biography

According to Israeli media and the U.S. government, Abu Ubaida is Hudayfa Samir Abdallah al-Kahlout, born 11 February 1985, in Gaza.[1][2][3] Abu Ubaida first emerged in 2002, representing the Qassam Brigades to the media and at press conferences. After the Israeli disengagement from Gaza in 2005, he was officially appointed the spokesman for Al-Qassam.[4]

According to the United States, Abu Ubaida has been the spokesman of the Qassam Brigades since at least 2007.[2] He only appears wearing a keffiyeh covering his face.[1]

In 2014, Israeli media outlets released a photo, allegedly of Abu Ubaida. However, the validity of the photo and name were denied by the al-Qassam Brigades.[1]

In April 2024, United States Department of Treasury issued sanctions against Abu Ubaida and re-asserted his identity as al-Kahlout.[2][3]

Andersen Global Announces Expanded Presence in Saudi Arabia

Alrikaz becomes a collaborating firm of Andersen Global

Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.

Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.

Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.

"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

Asım Orhan Barut

10 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Asım Orhan Barut[1]

Born	6 June 1926 Malatya, Turkey
Died	5 December 1994 (aged 68) Boulder, Colorado
Nationality	Turkish, American
Alma mater	Eidgenössische Technische Hochschule Zürich, Switzerland
Known for	Electrodynamics and classical theory of particles and fields, quantum field theory, elementary particles and group theory, Barut–Girardello coherent states
Scientific career	
Fields	High energy physics, quantum electrodynamics, and relativity

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

little theorem and laws of refraction, and many more.

Early Years

Pierre de Fermat was born in a wealthy family in Beaumont-de-Lomagne, France. His father, Dominique Fermat, was a wheat, cattle, and leather merchant and he also held the position of one of the four consuls of Beaumont-de-Lomagne. Pierre had three siblings, one brother and two sisters. He spent his childhood in the city of his birth.

Mathematician

Specialty	Mathematics & Law
Born	1601 Beaumont-de-Lomagne, France
Died	Jan. 12, 1665 Castres, France
Nationality	French

There is little evidence about his schooling, but it was probably at College de Navarre in Montauban where he received much of his education. Pierre studied at the University of Orleans from 1623 and earned a bachelor's in civil law in 1626. After his graduation, Pierre moved to Bordeaux.

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

Work in Mathematics

In 1630, Pierre bought a counsellor's office at Parlement de Toulouse and was sworn in by Grand Chambre in 1631. Pierre worked at this high court for the rest of his life. He rose through the ranks at the criminal court, reaching up to the highest post in 1652. Pierre was fluent in multiple languages, including French, Latin, Greek, Occitan, Spanish and Italian. Pierre shared his work with his friends and fellow mathematicians through letters. However, he would often not provide proof for his theorems. This allowed Pierre to retain the tag of amateur while he could still gain recognition he wanted.

Pierre had a close encounter with death in the early 1650s when a plague gripped the town of Beaumont-de-Lomagne. Many people died in that plague and even Pierre was badly impacted. In fact, in 1653, he was wrongly reported as dead when he was suffering from plague. However, Pierre survived that phase and went on to continue his duties at the court. Pierre died in 1665 in Castres, Tarn.

Contributions to Mathematics

Fermat is considered one of the greatest French mathematicians of the 17th Century. He made contributions to every field of mathematics that existed during his era. He explored the mathematical areas, including analytical geometry, infinite descent, and pre-evolved calculus. He considered mathematics to be a hobby, which is why he never published his work.

Fermat's greatest ideas are in the area of number theory, which is the purest form of mathematics involving the study of whole numbers and the relationships between them. Fermat became particularly famous for his Fermat's Last Theorem. According to this theorem, x to the power n + y to the power n = z to the power n has a no non-zero integer solutions for the values of x, y and z, and n is greater than 2. This theorem has puzzled mathematicians for years until recently.

He also contributed to the development of calculus through his work on the properties of curves. He relied on geometric and physical intuition to find the areas bounded by these curves through a summation process. This process is now called integral calculus. He is also regarded by some mathematicians as the inventor of differential calculus.

Along with Blaise Pascal, Fermat is also known as the co-founder of probability theory. An exchange of letters between the two mathematicians developed a general formulation of probability theory. Probability theory is the mathematics of gambling, risk, and change. The theory provides the

Jamal Khashoggi

From Wikipedia, the free encyclopedia

Jamal Ahmad Hamza Khashoggi (/kə ˈʃʊgdʒi, kə ˈʃɒgdʒi/; Arabic: جمال أحمد حمزة خاشقجي, romanized: *Jamāl ʾAḥmad Ḥamza Ḵāšuqjiyy*, Hejazi Arabic pronunciation: [dʒaˈmaːl xaˈʃuɡ(d)ʒi]; Modern Turkish: **Cemal Ahmed Kaşıkçı**; 13 October 1958 – 2 October 2018) was a Saudi journalist, dissident, author, columnist for *Middle East Eye* and *The Washington Post*, and a general manager and editor-in-chief of Al-Arab News Channel who was assassinated at the Saudi consulate in Istanbul on 2 October 2018 by agents of the Saudi government at the behest of Crown Prince Mohammed bin Salman.[9][8][10][11]

Khashoggi served as editor for the Saudi Arabian newspaper *Al Watan*, turning it into a platform for Saudi progressives.[12] Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter",[13] and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman.[14] He also opposed the Saudi Arabian-led intervention in Yemen.[15]

On 2 October 2018, Khashoggi

Jeff Bezos phone hacking incident

From Wikipedia, the free encyclopedia

In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman.[1][2] The Saudi Arabian embassy to the United States has denied the allegations.[3] Billionaire Jeff Bezos, the owner of *The Washington Post* newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the *National Enquirer* reported details of Bezos's affair in January 2019.[4] FTI Consulting did not link the *National Enquirer* to the hack.[4] In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.[5]

Jeff Bezos in 2017

Background

Starting in September 2017, *The Washington Post*, which is owned by Bezos, published a series of columns by Jamal Khashoggi that were critical of Saudi Arabia or bin Salman.[6] In

Saudi-led airstrikes on Yemen

From Wikipedia, the free encyclopedia

Not to be confused with US-led airstrike campaign in Yemen.

A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes[1] in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm[2] (Arabic: عملية عاصفة الحزم, romanized: *Amaliyyat ʿĀṣifat al-Ḥazm*). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015.[3] Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF).[4] Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.[5]

Many other civilians targets,[6] including schools,[7] and school buses[8] in Yemen are also bombed by the Saudi-led coalition.[9][10][11][12][13][14]

According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.[15]

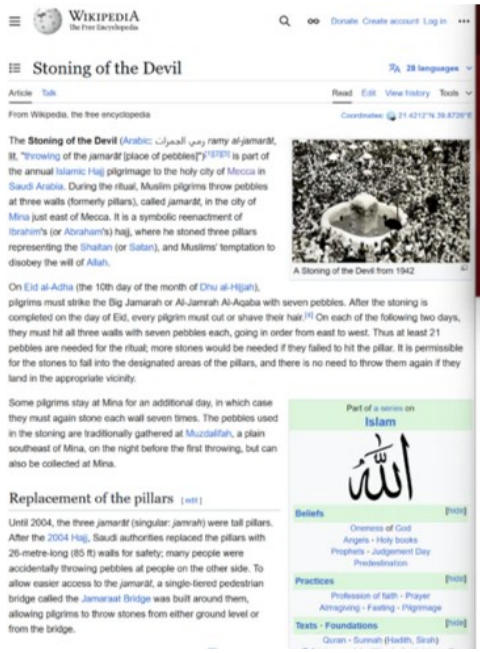
The UN accused the Saudi-led coalition of "complete disregard for human life".[16]

Timeline

October 2015 - Saada airstrike

Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015[17] had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.[18]

survivors search rubble for valuables, Sana'a, Yemen, Oct. 9, 2015.



Stoning of the Devil

From Wikipedia, the free encyclopedia

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

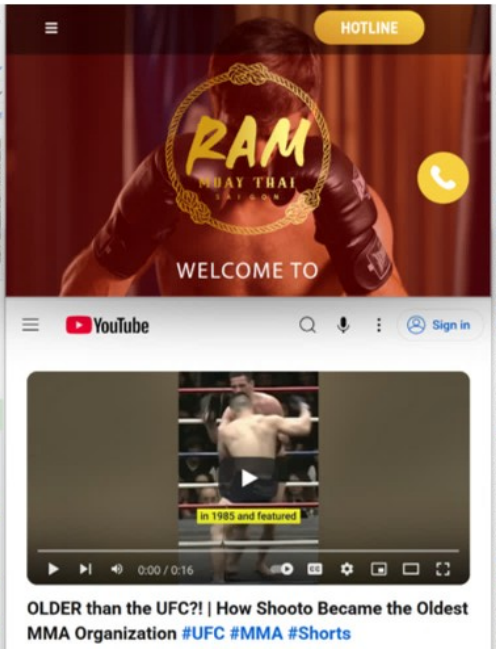
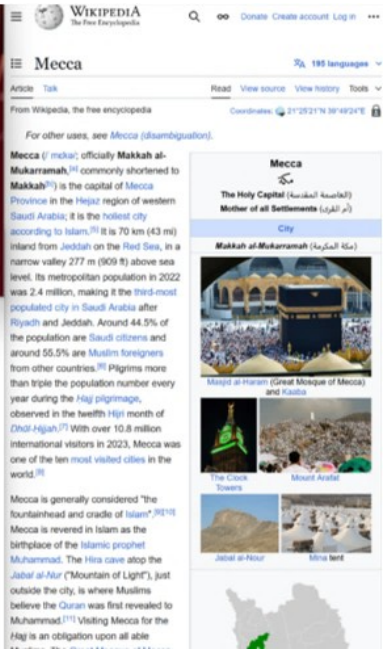
Replacement of the pillars

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.





Mecca

From Wikipedia, the free encyclopedia

For other uses, see Mecca (disambiguation).

Mecca (/ ˈmɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the Hajj pilgrimage, observed in the twelfth Hijri month of *Dhū-l-Ḥijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able

Ali ibn Sina
980 - 1037
Father of early moderm medicine
Ali Ibnou-Abi-Sina or commonly known to westerners as Avicenna, is one of the most significant physicians, astronomers, thinkers and writers of the 10-11th century and he is considered the father of early modern medicine.
He was the first to introduce in pharmacy the concept of successful treatment through experimentation and

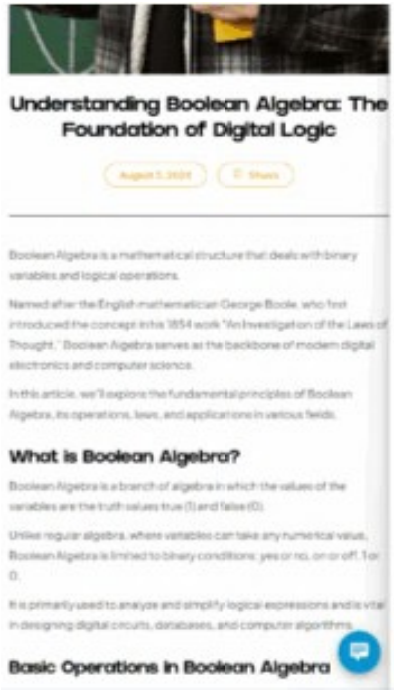
Ibn Sina: The Father of Early Medicine



Understanding Boolean Algebra: The Foundation of Digital Logic

Boolean Algebra is a mathematical structure that deals with binary variables and logical operations.

Named after the English mathematician George Boole, who first introduced the concept in his 1854 work "An Investigation of the Laws of Thought," Boolean Algebra serves as the backbone of modern digital electronics and computer science.

In this article, we'll explore the fundamental principles of Boolean Algebra, its operations, laws, and applications in various fields.

What is Boolean Algebra?

Boolean Algebra is a branch of algebra in which the values of the variables are the truth values true (1) and false (0).

Unlike regular algebra, where variables can take any numerical value, Boolean Algebra is limited to binary conditions: yes or no, on or off, 1 or 0.

It is primarily used to analyze and simplify logical expressions and is vital in designing digital circuits, databases, and computer algorithms.

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

Windsor, Rudolph R. 1935-

Smithsonian Libraries African Art Index Project DSI

The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.

The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
By Peter High, Contributor.

This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

Not to be confused with American producer DJ Khalil, Algerian musician Khaled (musician) or American R&B singer Khalid (American singer).
Khaled Mohammed Khaled (/ kælɪd/; born November 26, 1975),[3] known professionally as DJ Khaled, is an American DJ and record producer. Originally a Miami-based radio personality, Khaled has since become known for enlisting high-profile music industry artists to perform on singles and albums, for which he often serves as producer and hype man. Known as the "Anthem King", his distinctions are his booming voice presence, "motivational" abstractions, maximalist production style and numerous catchphrases.[4]
Khaled was born in New Orleans, Louisiana, to Palestinian immigrant parents. He first gained recognition as a radio host in the 1990s for the radio station 99 Jamz, and translated his popularity by working with Fat Joe's hip hop collective, Terror Squad, as a DJ for their live performances and as a producer for the group. Following his production credits on the group's material,[5] Khaled enlisted several hip hop artists associated with the group and his native Miami to perform on his debut studio album, Listennn... the Album (2006). His second album, We the Best (2007), spawned the hit single "I'm So Hood" (featuring T-Pain, Trick Daddy, Rick Ross and Plies). His two subsequent releases—We Global (2008) and Victory (2010)—both peaked within the ten of the Billboard 200; the latter was supported by the single "All I Do Is Win" (featuring T-Pain, Ludacris, Snoop Dogg and Rick Ross), which received triple platinum certification by the Recording Industry Association of America (RIAA).

From Wikipedia, the free encyclopedia
Mitsuyo Maeda (前田 光世, Maeda Mitsuyo, November 18, 1878 – November 28, 1941) naturalized as Otávio Maeda (Portuguese pronunciation: [o tavju ma'ede]),[1] was a Japanese-born judōka and prizefighter in no holds barred competitions. He was known as Count Combat or Conde Koma in Spanish and Portuguese, a nickname he picked up in Spain in 1908. Along with Antônio Soshihiro Satake, he pioneered judo in Brazil, the United Kingdom, and other countries.[1]
Maeda was fundamental to the development of Brazilian jiu-jitsu, including through his teaching of Carlos Gracie and others of the Gracie family.[2] He was also a promoter of Japanese emigration to Brazil. His accomplishments led to him being called the "toughest man who ever lived" and being referred to as the father of Brazilian Jiu-jitsu.[3]
Biography [edit]
Maeda was born in Funazawa Village, Hirosaki City, Aomori Prefecture, Japan, on November 18, 1878. He attended Kenritsu Itiu high school (currently Hirokou—a Hirosaki school).[1] As a child, he was known as Hideyo.[4] He practiced sumo as a teenager, but lacked the ideal build for the sport. In 1894, at seventeen years of age, his parents sent him to Tokyo to enroll in Waseda University. He joined the Kodokan Judo Institute the following year.[1]

Let's take a closer look at some of the best known Muay Boran techniques coming from Phra Ram's warrior skills.
Phra Ram's techniques.
I. A set of powerful maneuvers are inspired by the combat situations Phra Ram faces during the war with the Army of Evil. Let's analyse some of those Mai Muay.
a. Phra Ram Yaeb Longka. Lord Rama breaks into Lanka. This technique is a strong maneuver that stops the opponent in his tracks, kicking the side of the neck with the shinbone. A real knock out move.
b. Phra Ram Ti Tab. Lord Rama attacks the (enemy) army. In a typical military maneuver, the Nak Muay attacks from the flanks with two different weapons: a punch and a swing kick. The punch is commonly aimed at the opponent's head while the kick targets the body. If the technique is performed flawlessly, it is very difficult to block or evade both attacks.
c. Phra Ram Sakod Tab. Lord Rama surprises the (enemy) army. This fast attack is executed by suddenly jumping and throwing a straight kick aimed at the opponent chin. It is very difficult to avoid this vicious leg attack.

Satoru Sayama (佐山 聡, Sayama Satoru) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names Sammy Lee, and masked Super Tiger, Tiger King, Tiger Mask and The Mask of Tiger. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]
He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate,
Satoru Sayama
Muhammad Hussain Inoki[3] (born Kanji Inoki (猪木寛至, Inoki Kanji) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name Antonio Inoki. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.
Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.
In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.[4][5][6]

From Wikipedia, the free encyclopedia

Satoru Sayama (佐山 聡, *Sayama Satoru*) (born November 27, 1957) is a Japanese professional wrestler, mixed martial artist, writer, and mixed martial arts (MMA) and wrestling promoter, best known as the original Tiger Mask. He has wrestled under his real name as well as the names **Sammy Lee**, and masked **Super Tiger**, **Tiger King**, **Tiger Mask** and **The Mask of Tiger**. He is the only man to hold the WWF Junior Heavyweight Championship and the NWA World Junior Heavyweight Championship simultaneously.[2][3]

He is also recognized as a pioneer in mixed martial arts, founding Shooto in 1985, the first MMA organizations in the world. Sayama also started mixed martial arts training and developed his own Shooto syllabus for learning what could be considered the first put together MMA training of its kind, with a focus on striking from arts like Boxing, Muay Thai and Karate,

Satoru Sayama

Muhammad Hussain Inoki[3] (born **Kanji Inoki** (猪木寛至, *Inoki Kanji*) on February 20, 1943 – October 1, 2022) was a Japanese professional wrestling and mixed martial arts promoter, politician, and retired professional wrestler and martial artist, best known by his ring name **Antonio Inoki**. Inoki's ring name was a tribute to fellow professional wrestler Antonino Rocca.

Inoki began his professional wrestling career in the Japanese Wrestling Association (JWA) under the tutelage of Rikidōzan. Inoki quickly became one of the most popular stars in the history of Japanese professional wrestling.

In 1989, Inoki entered Japanese politics as he was elected to the Japanese House of Councillors and as part of his first term with the House of Councillors successfully negotiated with Saddam Hussein for the release of Japanese hostages. He retired from politics in 1995, but was re-elected in 2013. On October 1, 2022, at age 79, Inoki died from systemic transthyretin amyloidosis.[4][5][6]

Bin Laden claims responsibility for 9/11

CBC News ·
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004

Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.

- INDEPTH: **Remembering September 11**

The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

Status Coup reporter Ashley Bishop was covering a Free Palestine protest that was part of the Global Strike for Gaza events on April 7th. During the march, protesters were forced by the NYPD onto the sidewalk, where a Zionist proceeded to through garbage, bleach, and poop on the heads of protesters. The response of the NYPD to this is shocking. WE NEED YOUR SUPPORT to stay out ON-THE-GROUND covering these important stories the corporate media COVERS UP.

d. Warsaw, Poland, 20 September 1996), mathematics, number theory.
Erdös was a Hungarian mathematician who spent much of his life traveling and working with colleagues around the world on mathematical problems of many kinds. He published some 1500 papers, making him the most prolific major mathematician of the twentieth century, and had more than 450 collaborators and coauthors. His work falls into a number of fields, some of which he created, but which can mostly be embraced under the general heading of discrete mathematics, one of the major developments of twentieth-century mathematics. It also exerted a major influence on computer science, a field in which Erdös

Animation showing how the Archimedes screw works, with the red balls representing water
Animation showing how Archimedes screws can generate power if they are driven by flowing fluid
The Archimedes' screw, also known as the Archimedean screw, hydrodynamic screw, water screw or Egyptian screw,[1] is one of the earliest documented hydraulic machines. It was so-named after the Greek mathematician Archimedes who first described it around 234 BC, although the device had been developed in Egypt earlier in the century.[2] It is a reversible hydraulic machine that can be operated both as a pump or a power generator.
As a machine used for lifting water from a low-lying body of water into

Uit Wikipedia, de vrije encyclopedie
Mehmet Ülger (Pınarbaşı (Kayseri), 1 februari 1962 – Rotterdam, 27 november 2017) was een Nederlands journalist en documentairemaker.
Loopbaan [bewerken | brontekst bewerken]
Hij studeerde aan de Academie voor de Journalistiek in Tilburg en werkte sinds midden jaren negentig als journalist voor tv-actualiteitenrubrieken, tijdschriften en kranten, waaronder Netwerk, EenVandaag, KRO Spoorloos, NOVA, Zembla, het ANP, Trouw, Contrast, Wordt Vervolgd, De Humanist, De Groene Amsterdammer, de Volkskrant en Onze Wereld.
Ülger was gespecialiseerd in Turkije, de islam, allochtonen in Nederland en Turks nationalisme. Hij deed achtergrondonderzoek en werkte soms undercover. Met Stella Braam schreef hij Grijze Wolven : een zoektocht naar Turks extreem-rechts. Kort na publicatie van het boek in 1997 werden de schrijvers met de dood bedreigd en moesten ze onderduiken.
Op 7 januari 2015 werd Ülger korte tijd vastgehouden in Istanboel. Hij werd verhoord door de politie, de reden was dat hij in september 2013 tegen de regels

Andersen Global Announces Expanded Presence in Saudi Arabia
Alrikaz becomes a collaborating firm of Andersen Global
Andersen Global furthers its expansion into the Middle East with news that the leading independent tax consulting firm in the Kingdom of Saudi Arabia (KSA) has become a collaborating firm of Andersen Global.
Alrikaz Tax Consultants has signed a Collaboration Agreement with Andersen Global, expanding Andersen Global's presence in the country with the largest economy in the region, and paving the way for continued growth.
Alrikaz has five offices and nearly 100 employees across major economic hubs of KSA, including Jeddah, Riyadh and Al Khobar. Andersen Global's expansion in the Middle East has been significant this year and includes added presence in UAE, Kuwait, Jordan, and Lebanon.
"Saudi Arabia is critical to any firm's strategy for growth in the Middle East, so it's a considerable collaboration on our part that

From Wikipedia, the free encyclopedia
Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born Benjamin Carl Goldstein;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.
Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL),

Pandrasus

SIGN IN TO EDIT

Pandrasus was a Greek King.

In 789 BC, the Latin exile Brutus arrived in Pandrasus' territory and staged a slave revolt of 400 Trojan slaves. While the freed slaves fought Pandrasus' men, Brutus took the king hostage and demanded that he and the slaves be given ships and supplies to escape the region. Pandrasus, capitulating to Brutus' demands, gave one of his daughters, Innogen as a wife, as a sign of good faith.

After his daughter was wed with Brutus, the Latin exile left the Greek territory with Innogen and the freed Trojans.

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and I do not know of a more severe Idolatry, than that a woman should say Jesus is her Lord although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.
Many people have heard of Isaac Newton and his amazing scientific and mathematical discoveries. Very few people, however, actually understand Isaac Newton's personal motivations that drove his scientific progress. Isaac Newton was devoutly religious. He claims that everything he did scientifically was to prove God's existence. Newton wrote to his friend Richard Bentley: "When I wrote my treatise about our System I had an eye upon such Principles as might work with considering men for the belief in a Deity and nothing can rejoice me more than to find it useful for that purpose." The climate in England during Newton's time prevented him from speaking too openly about his faith. Isaac Newton reected Trinitarianism (the belief that God existed as three persons in one being), a stance England punished by death. He believed the Catholic Church was the anti-Christ that had corrupted the scriptures to gain wealth and power. French publishers, who wanted a science of "Reason," not of religion—much less Newton's religion—edited out the majority of his references to God in his scientific papers. In fact, Newton wrote more about religion than he did about science. For instance, he wrote extensively about the prophecies in the Books of Daniel and Revelation. Currently, there is a project underway to translate Newton's religious manuscripts, which are written in Latin, and investigate its precise religious beliefs.[1] Newton's religious views are very similar to two small Protestant religious groups: Chrisadelphians and the Church of God Abrahamic Faith (aka Church of the Blessed Hope).
Isaac Newton's religious writings were unknown for a very long time because England's repressive religious laws prevented him from publically disseminating these religious writings. His secret esentially died with him until a famous economist purchased a trunk full of Newton's writings. John Maynard Keynes purchased the papers that were thought to consist primarily of Newton's writing on the subject of Alchemy, one of Newton's most passionate subjects, second only to the Bible.[2] Keynes donated these papers to Kings College Cambridge, where scholars soon discovered the real Isaac Newton. The world's leading scholar of Isaac Newton's religious writings is Dr. Stephen Snobelen, who happens to be a Christadelphian.
Newton's Various Religious Beliefs
Baptism is a hallmark of Christianity. One is required to receive baptism to receive salvation. In fact, the Catholic Church baptizes infants for this very reason. Newton, although believing baptism was required, disagreed with the Catholic Church's position of baptizing infants. In Newton's view, it was the change n one's life, expressed publically through the physical baptism, which brought the actual salvation.[3] Newton reasoned that an infant was unable to think complicated thoughts; therefore, an infant could not undergo a life changing experience. Without a life changing experience and conscious commitment to God, the infant baptism was meaningless because a person is only saved when sins "are remitted by a sincere repentance from dead works."[4]
For Newton, the Jewish religion was the Jewish religion, not the religion of the Gentiles. The religion of the Gentiles was that of Noah. Jewish Christians were to remain Jewish and follow the laws of Moses, as commanded by God, and Gentile Chrisians were to follow the laws of Noah, as commanded by God.[5] Jesus had come to the Jews to force them to follow the laws of Moses, and the Gentiles to force them to follow the laws of Noah. Essentially God had created two covenants working side-by-side for the same goal, one of Moses and one of Noah. These beliefs were very common in First Century Christianity, and Second Temple Judaism. In Judaism, there are Seven Noahide Laws which all Gentiles must follow, several of which are laid out in Acts 15:29: "[t]hat you abstain from meat that has been sacrificed to idols and from blood and from what has been strangled and from sexual immorality." These are the requirements of Gentile Christians who wish to retain salvation, according to Newton.
Baptism. Prior to receiving the Baptism, Newton believed that one must know the "basics" of Christianity. The amount of knowledge requirec was insubstantial: Repenting for one's sins; following the two great commandments; believing in God the Father; believing Jesus was the son of God, born of a virgin birth, that Jesus sacrificed himself, and that Jesus was resurrected to sit at the right hand of God.[6] The more complicated theological discussions were to be left to those who had beer Christians longer, pursuing a higher learning.[7] Newton also believed that when two Christians disagreed, they could not excommunicate each other because excommunication could only apply to Christians who disagreed on the "basics" of Christianity.[8] This was contrary to thepractices of the Catholic Church and the Church of England, who excommunicated Christians for certain political or complicated theological positions. Trinitarianism. Furthermore, Newton strongly disagreed with the Trinity, believing the Father was God, Jesus was a human that was the Son of God, and the Holy Spirit was a personification of God's power. The evidence often cited by the Catholic Church was 1 John 5:7-8, which adds, "these three are one." However, this is only found within the Textus Receptus, which the King James Version was translated from. Newton believed "these three are one" was an addition and forgery to the text.[9] Textual scholars, who dubbed the forgery the "Johannine Comma", would later vindicate Newton.[10] Newton also believed that the Trinity was not originally the Christian coctrine of the Godhead, a position later vindicated by scholars.[11] The method Newton used in determining the authenticity of the Johannine Comma, or the lack thereof, was to compare texts and writings of some early Catholic Church Fathers. None of the text mentioned the phrase, including those trying to prove the Trinity. Accordingly, Newton concluded it was not authentic.[12]

Jamal Ahmad Hamza Khashoggi (/kəˈʃʊgdʒi, kə-/; Arabic: جمال أحمد حمزة خاشقجي, romanized: *Jamāl ʾAḥmad Ḥamza Ḵāšuqjiyy*, Hejazi Arabic pronunciation: [dʒaˈmaːl xaˈʃuɡ.(d)ʒi]; Modern Turkish: **Cemal Ahmed Kaşıkçı**; 13 October 1958 – 2 October 2018) was a Saudi journalist, dissident, author, columnist for *Middle East Eye* and *The Washington Post*, and a general manager and editor-in-chief of Al-Arab News Channel who was assassinated at the Saudi consulate in Istanbul on 2 October 2018 by agents of the Saudi government at the behest of Crown Prince Mohammed bin Salman.[8][9][10][11]

Khashoggi served as editor for the Saudi Arabian newspaper *Al Watan*, turning it into a platform for Saudi progressives.[12] Khashoggi fled Saudi Arabia in September 2017 and went into self-imposed exile. He said that the Saudi government had "banned him from Twitter",[13] and he later wrote newspaper articles critical of the Saudi government. Khashoggi had been sharply critical of the Saudi rulers, King Salman and Crown Prince Mohammed bin Salman.[14] He also opposed the Saudi Arabian-led intervention in Yemen.[15]

On 2 October 2018, Khashoggi

Jeff Bezos phone hacking incident

1 language

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

In January 2020, the FTI Consulting company claimed that in May 2018 with "medium to high confidence" the phone of Jeff Bezos had been hacked by a file sent from the WhatsApp account of the crown prince of Saudi Arabia, Mohammed bin Salman.[1][2] The Saudi Arabian embassy to the United States has denied the allegations.[3] Billionaire Jeff Bezos, the owner of *The Washington Post* newspaper and founder of the company Amazon, engaged FTI Consulting in February 2019 after the *National Enquirer* reported details of Bezos's affair in January 2019.[4] FTI Consulting did not link the *National Enquirer* to the hack.[4] In December 2021, the FBI stated they could not find proof to substantiate claims that Saudi Arabia hacked Jeff Bezos's phone, and has considered an investigation into those allegations a low priority.[5]

Jeff Bezos in 2017

Background [edit]

Starting in September 2017, *The Washington Post*, which is owned by Bezos, published a series of columns by Jamal Khashoggi that were critical of Saudi Arabia or bin Salman.[6] In

Saudi-led airstrikes on Yemen

4 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Not to be confused with US-led airstrike campaign in Yemen.

A Saudi Arabian-led military intervention in Yemen began in 2015, in an attempt to influence the outcome of the Yemeni Civil War. Saudi Arabia, spearheading a coalition of nine Arab states, began carrying out airstrikes[1] in neighbouring Yemen and imposing an aerial and naval blockade on 26 March 2015, heralding a military intervention code-named Operation Decisive Storm[2] (Arabic: عملية عاصفة الحزم, romanized: *ʿAmaliyyat ʿĀṣifat al-Ḥazm*). More than 130 health facilities (2019) in Yemen have been destroyed by a series of airstrikes conducted by the Saudi Arabian-led coalition since March 2015.[3] Many of these have been public health hospitals staffed or supported by Doctors Without Borders (MSF).[4] Critics of the assaults say the airstrikes are war crimes in violation of the protections of health care facilities afforded by the internationally recognized rules of war and have called for independent investigations.[5]

Many other civilians targets,[6] including schools,[7] and school buses[8] in Yemen are also bombed by the Saudi-led coalition.[9][10][11][12][13][14]

According to a report by the United Nations in 2022, 2,900 schools were damaged, destroyed, or unused during the Yemeni Civil War.[15]

The UN accused the Saudi-led coalition of "complete disregard for human life".[16]

Timeline [edit]

October 2015 - Saada airstrike [edit]

Doctors Without Borders reported that a Saudi Arabian-led coalition airstrike on 26 October 2015[17] had completely destroyed the Médecins Sans Frontières hospital in Saada, in northwestern Yemen, including the operating room. The first strike hit an unused part of the hospital, so the facility was completely evacuated at once. There were no direct casualties. The spokesman for the coalition forces, Brig-Gen Ahmed al-Asiri, disclaimed responsibility for the attack.[18]

Stoning of the Devil

28 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Coordinates: 21.4212°N 39.8726°E

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

From Wikipedia, the free encyclopedia

Coordinates: 21°25′21″N 39°49′24″E

For other uses, see Mecca (disambiguation).

Mecca (/ mɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the *Hajj* pilgrimage, observed in the twelfth Hijri month of *Dhūl-Hijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam",[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able

Dr. Michael DeBakey, Father of Cardiac Surgery, Dies at 99

July 12, 2008 -- Considered the father of cardiac surgery, and by many the world's greatest surgeon, Michael E. DeBakey passed away on Friday night in Houston, just two months shy of his 100th birthday. Born in 1908 in Lake Charles, Louisiana to Lebanese-Christian immigrants, DeBakey invented numerous surgical procedures and techniques, as well as a host of devices that revolutionized vascular and cardiac surgery.

Israel has become increasingly involved in the world transplantation industry in the last decade. This comes a few years after India, which until the 1990s was the global center of the organ trade, enacted legislation prohibiting transplants using organs acquired from living people.

According to a 2015 European Parliament report, Israeli physicians and patients played a major role in the international organ trade, initially

On the internet, the offer looks very serious: a start to a new life without dialysis, with a new kidney in just a few weeks. A glimmer of hope for seriously ill people who have been waiting for years for a donor organ. Behind it all is a notorious network of international organ traffickers.
We have been following the trail for months. At the center is a transplant

Dr. Rafiuddin Ahmed (1890-1965) was born on December 24, 1890, in Bardhanpara, East Bengal, India. He graduated from Aligarh Muslim University in 1908. By the next year, he left for the United States by working his passage over.He enrolled in the University of Iowa School of Dentistry, earning his dental degree in 1915. Dr. Ahmed then worked in the Forsyth Dental Infirmary for Children in Boston, Massachusetts, until 1918. In 1919, he returned to India to open a dental practice in Calcutta.
In 1920, Dr. Ahmed founded the First Dental College of India, which was financed by starting the New York Soda Fountain in Calcutta. Dr. Ahmed published the First Student's Handbook on Operative Dentistry in 1928.

From Wikipedia, the free encyclopedia
Revolution Muslim (RM) was an organization based in New York City that advocated the establishment of a traditionalist Islamic state through the removal of the current rulers in Muslim-majority nations and an end to what they consider "Western imperialism". It was founded in 2007 by two American Muslim men: Jesse Curtis Morton and Yousef al-Khattab.

CHM
THE FATHER OF DIGITAL LOGIC
NOV 16, 2015
5:30 PM
"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."
- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer
George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.
The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jeremy Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.
Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.
The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Demystifying the Genius of George Boole: Father of the Information Age
by Natalie Smith | February 9, 2025 | 8 min read |
Tech stuff & gadgets
George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

The original Black Jews

Smithsonian Libraries and Archives

Object Details

Author
Windsor, Rudolph R. 1935-

Smithsonian Libraries African Art Index Project DSI

The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.

The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

From Simple English Wikipedia, the free encyclopedia

Brenton Harrison Tarrant (born 27 October 1990) is an Australian mass murderer, terrorist, and white nationalist who committed the Christchurch mosque shootings where murdered 51 people and wounded 40 others on 15 March 2019 before being arrested by police.[1][2]

He is the deadliest murderer in New Zealand's history.[3]

Brenton in Turkiye

Early life [change | change source]

Tarrant was born on 27 October, 1990 and grew up in Grafton, New South Wales where he where he went to Grafton High School.[4] He had a troubled childhood, starting when his parents separated, his grandfather died and their family home was burnt down in a fire.[5] These events traumatized him and left him with social anxiety disorder, which likely worsened when his mother's new partner assaulted him, his sister and mother.[5]

He started gaining weight from age 12, because of this he started getting bullied at school, where he also had few friends. He was unfocused at school but also strangely familiar with topics like World War II. Tarrant showed signs of racism and worries about immigration as young as 12 years old. He frequently made racist comments about his mother's former partner's Indigenous Australian heritage, which worried his high school teachers.[6] He started using 4chan at the age of 14, a site known for sharing extremist content, and start obsessively excercising to lose weight.

Travels [change | change source]

A map showing Tarrant's international travels.

In 2009, Tarrant qualified as a personal trainer at Big River Gym in Grafton. The next year, he found his father dead by suicide, following this he inherited A$457,000 from his father, he stopped working as a personal trainer and used the money to invest and travel across the world.In March 2013, he travelled to New Zealand for a vacation, where he stayed with a friend for three days for gaming. The friend and his parents were gun users. They took Tarrant to a shooting club where he had his first experience with guns.[7]

Police in Bulgaria and Turkey investigated Tarrant's visits to their countries.[8][9][10] Security officials suspected that he went into contact with far-right organizations about two years before the shootings,

From Wikipedia, the free encyclopedia
Not to be confused with American producer DJ Khalil, Algerian musician Khaled (musician) or American R&B singer Khalid (American singer).
Khaled Mohammed Khaled (/ kælɪd/; born November 26, 1975),[3] known professionally as DJ Khaled, is an American DJ and record producer. Originally a Miami-based radio personality, Khaled has since become known for enlisting high-profile music industry artists to perform on singles and albums, for which he often serves as producer and hype man. Known as the "Anthem King", his distinctions are his booming voice presence, "motivational" abstractions, maximalist production style and numerous catchphrases.[4]
Khaled was born in New Orleans, Louisiana, to Palestinian immigrant parents. He first gained recognition as a radio host in the 1990s for the radio station 99 Jamz, and translated his popularity by working with Fat Joe's hip hop collective, Terror Squad, as a DJ for their live performances and as a producer for the group. Following his production credits on the group's material,[5] Khaled enlisted several hip hop artists associated with the group and his native Miami to perform on his debut studio album, Listenrn... the Album (2006). His second album, We the Best (2007), spawned the hit single "I'm So Hood" (featuring T-Pain, Trick Daddy, Rick Ross and Plies). His two subsequent releases—We Global (2008) and Victory (2010)—both peaked within the top ten of the Billboard 200; the latter was supported by the single "All I Do Is Win" (featuring T-Pain, Ludacris, Snoop Dogg and Rick Ross), which received triple platinum certification by the Recording Industry Association of America (RIAA).

impacts of its products.

Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Phillip Morris made were in 1854.

On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.

The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

THE DEFINITIVE ORIGIN OF PARKOUR & DAVID BELLE'S LEGACY

ADAM DUNLAP · OCTOBER 18, 2023

HISTORY

"Parkour is here and it will stay here forever! Because it was born from a pure heart and nourished from all the love that a son can give to his father!" –David Belle

---

David Belle is the undisputed founder of Parkcur, a discipline that revolutionized physical movement. Parkour's roots can be traced back to a profound source, David's father, Raymond Belle. Before we delve into the legacy of Parkour, it's important to acknowledge the historical context and the distinct characteristics that set it apart from other physical

An Ocean County man was charged with possessing child pornography after an investigation based on a tip from the National Center for Missing and Exploited Children, according to the county prosecutor's office.

Dennis Hubert, 42, of Brick Township was arrested Thursday at his home after a court-authorized search turned up several items of child pornography, authorities said.

From Wikipedia, the free encyclopedia

Baruch Kopel Goldstein (Hebrew: ברוך קאפל גולדשטיין; born **Benjamin Carl Goldstein**;[2] December 9, 1956 – February 25, 1994) was an American-Israeli physician and religious extremist who, in 1994, murdered 29 Palestinian people in Hebron in the Israeli-occupied West Bank, an incident of Jewish terrorism.[3][4][5] Goldstein was a supporter of Kach, a religious Zionist party that the United States, the European Union and other countries designate as a terrorist organization.[6] Kach was banned less than a month after Goldstein's attacks on account of statements made in support of his actions.

Born in 1956 in Brooklyn, New York, to an Orthodox Jewish family, Goldstein received his education there, starting with Jewish scripture studies, and eventually studying medicine at Yeshiva University. In the United States, he was a member of the Jewish Defense League (JDL), a militant Jewish organization founded by his

Abstract

The hominin record from southern Asia for the early Late Pleistocene epoch is scarce. Well-dated and well-preserved fossils older than ~45,000 years that can be unequivocally attributed to *Homo sapiens* are lacking[1,2,3,4]. Here we present evidence from the newly excavated Fuyan Cave in Daoxian (southern China). This site has provided 47 human teeth dated to more than 80,000 years old, and with an inferred maximum age of 120,000 years. The morphological and metric assessment of this sample supports its unequivocal assignment to *H. sapiens*. The Daoxian sample is more derived than any other anatomically modern humans, resembling

From Wikipedia, the free encyclopedia

Asım Orhan Barut (June 6, 1926 – December 5, 1994) was a Turkish-American theoretical physicist.[2]

Education [edit]

He received both his undergraduate diploma and his Ph.D. degree from the Swiss Federal Institute of Technology in Zurich in 1949 and 1952, respectively. He pursued his postdoctoral studies at the University of Chicago during 1953–1954.

Academic life [edit]

Barut was an assistant professor at Reed College during 1954-55 and then joined the faculty at Syracuse University in 1956. He became a professor of physics at the University of Colorado at Boulder in 1962 and served for 32 years.[3]

Pandrasus

SIGN IN TO EDIT

Pandrasus was a Greek King.

In 789 BC, the Latin exile Brutus arrived in Pandrasus' territory and staged a slave revolt of 400 Trojan slaves. While the freed slaves fought Pandrasus' men, Brutus took the king hostage and demanded that he and the slaves be given ships and supplies to escape the region. Pandrasus, capitulating to Brutus' demands, gave one of his daughters, Innogen as a wife, as a sign of good faith.

After his daughter was wed with Brutus, the Latin exile left the Greek territory with Innogen and the freed Trojans.

July 1654: Pascal's Letters to Fermat on the "Problem of Points"

July 1, 2009

Games of chance are as ancient as human history, with archaeologists unearthing evidence of them on prehistory digs. Gambling also led, indirectly, to the birth of probability theory, as players sought to better understand the odds. In the mid-17th century, an exchange of letters between two prominent mathematicians—Blaise Pascal and Pierre de Fermat—laid the foundation for probability, thereby changing the way scientists and mathematicians viewed uncertainty and risk.

Stoning of the Devil

28 languages

Article Talk | Read Edit View history Tools

From Wikipedia, the free encyclopedia

Coordinates: 21.4212°N 39.8726°E

The **Stoning of the Devil** (Arabic: رمي الجمرات *ramy al-jamarāt*, lit. "throwing of the *jamarāt* [place of pebbles]")[1][2][3] is part of the annual Islamic Hajj pilgrimage to the holy city of Mecca in Saudi Arabia. During the ritual, Muslim pilgrims throw pebbles at three walls (formerly pillars), called *jamarāt*, in the city of Mina just east of Mecca. It is a symbolic reenactment of Ibrahim's (or Abraham's) hajj, where he stoned three pillars representing the Shaitan (or Satan), and Muslims' temptation to disobey the will of Allah.

A Stoning of the Devil from 1942

On Eid al-Adha (the 10th day of the month of Dhu al-Hijjah), pilgrims must strike the Big Jamarah or Al-Jamrah Al-Aqaba with seven pebbles. After the stoning is completed on the day of Eid, every pilgrim must cut or shave their hair.[4] On each of the following two days, they must hit all three walls with seven pebbles each, going in order from east to west. Thus at least 21 pebbles are needed for the ritual; more stones would be needed if they failed to hit the pillar. It is permissible for the stones to fall into the designated areas of the pillars, and there is no need to throw them again if they land in the appropriate vicinity.

Some pilgrims stay at Mina for an additional day, in which case they must again stone each wall seven times. The pebbles used in the stoning are traditionally gathered at Muzdalifah, a plain southeast of Mina, on the night before the first throwing, but can also be collected at Mina.

Replacement of the pillars [edit]

Until 2004, the three *jamarāt* (singular: *jamrah*) were tall pillars. After the 2004 Hajj, Saudi authorities replaced the pillars with 26-metre-long (85 ft) walls for safety; many people were accidentally throwing pebbles at people on the other side. To allow easier access to the *jamarāt*, a single-tiered pedestrian bridge called the Jamaraat Bridge was built around them, allowing pilgrims to throw stones from either ground level or from the bridge.

The *jamarāt* are named (starting from the east):[5]

- the first *jamrah* (*al-jamrah al-'ūlā*), or the smallest *jamrah* (الجمرة الصغرى *al-jamrah aṣ-ṣughrā*),
- the middle *jamrah* (الجمرة الوسطى *al-jamrah al-wusṭā*),
- the largest *jamrah* (الجمرة الكبرى *al-jamrah al-kubrā*), or Jamrah of Aqaba (جمرة العقبة *jamrat al-ʿaqaba*).

Coordinates: 21°25′21″N 39°49′24″E

For other uses, see Mecca (disambiguation).

Mecca (/ ˈmɛkə/; officially **Makkah al-Mukarramah**,[a] commonly shortened to **Makkah**[b]) is the capital of Mecca Province in the Hejaz region of western Saudi Arabia; it is the holiest city according to Islam.[5] It is 70 km (43 mi) inland from Jeddah on the Red Sea, in a narrow valley 277 m (909 ft) above sea level. Its metropolitan population in 2022 was 2.4 million, making it the third-most populated city in Saudi Arabia after Riyadh and Jeddah. Around 44.5% of the population are Saudi citizens and around 55.5% are Muslim foreigners from other countries.[6] Pilgrims more than triple the population number every year during the *Hajj* pilgrimage, observed in the twelfth Hijri month of *Dhūl-Ḥijjah*.[7] With over 10.8 million international visitors in 2023, Mecca was one of the ten most visited cities in the world.[8]

Mecca is generally considered "the fountainhead and cradle of Islam".[9][10] Mecca is revered in Islam as the birthplace of the Islamic prophet Muhammad. The Hira cave atop the *Jabal al-Nur* ("Mountain of Light"), just outside the city, is where Muslims believe the Quran was first revealed to Muhammad.[11] Visiting Mecca for the *Hajj* is an obligation upon all able Muslims. The Great Mosque of Mecca, known as the *Masjid al-Haram*, is home to the Ka'bah, believed by Muslims to have been built by Abraham and Ishmael. It is Islam's holiest site and the direction of prayer (*qibla*) for all Muslims worldwide.[12]

Muslim rulers from in and around the region long tried to take the city and keep it in their control, and thus, much like most of the Hejaz region, the city has seen several regime changes. The city was most recently conquered in the Saudi conquest of Hejaz by Ibn Saud and his allies in 1925. Since then, Mecca has seen a tremendous expansion in size and infrastructure, with newer, modern buildings such as the Abraj Al Bait, the world's fourth-tallest building and third-largest by floor area,[13] towering over the Great Mosque. The Saudi government has also carried out the destruction of several historical structures and archaeological sites,[14] such as the Ajyad Fortress.[15][16][17] However,

CARL FRIEDRICH GAUSS – The Prince of Mathematics
Biography
Carl Friedrich Gauss
7 August 2023 / 9 February 2025 by Charlton C
Carl Friedrich Gauss (1777-1855), the Father of Arithmetic Progression, was a German child genius who went on to become one of the greatest mathematicians of all time, and thanks to him we can now easily find the sum of an arithmetic sequence.
Daniel C, Aarav S
His life
Carl Friedrich Gauss was born in 1777 in the city of Brunswick into a lower class family. His father would work many different jobs just to make ends meet, and his mother was illiterate. However, this didn't stop him from becoming a renowned mathematician, astronomer and

From Wikipedia, the free encyclopedia

This article is about the food processing company. For other uses, see Ghandour.

Gandour (Arabic: غندور) is a food processing company founded in Beirut, Lebanon in 1857, with headquarters in Jeddah, Saudi Arabia.

A manufacturer of confectioneries like hard-boiled candies,[3] the company started industrial level production in 1912, before expanding its operations to Saudi Arabia in 1956. Gandour is widely regarded as the first chocolate and chewing gum manufacturer in Saudi Arabia.[4]

Currently, Gandour has manufacturing facilities in Saudi Arabia, Egypt, Lebanon, and India, and serves the area of the Middle East, North Africa and Southeast Asia.[2]

From Wikipedia, the free encyclopedia

ARASCO is a closed joint stock company in Saudi Arabia. It is one of the GCC's most prominent national food companies, ranking among the 100 largest companies in Saudi Arabia.[1] It is a privately held feed-to-food company. It is Arabian Agricultural Services Company (ARASCO), a food security enterprise and the parent company of six strategic business units. Its business is privately held by Saudi shareholders.[2]

An ARASCO facility

History [edit]

Arabian Agricultural Services Company (ARASCO),[3] (a closed joint stock company) is a private company working in the field of food supply, where it produces and enables others to produce food for humans and livestock, established in 1983 and owned by a group of Saudi shareholders and its main headquarter in the city of Riyadh and its factories and business sectors are distributed between the cities of Riyadh, Al-Kharj and Dammam.

It began its business with a limited range of services and products to support the booming Saudi wheat sector at the time. In early 1987 the company made a strategic decision to expand its business and enter the feed sector and to

TIME 100: THE LIST
Salman Khan
Educator
By Bill Gates | Wednesday, Apr. 18, 2012
Like a lot of great innovators, Salman Khan didn't set out to change the world. He was just trying to help his teenage cousin with her algebra from across the country. But from a closet turned office in his Silicon Valley apartment, Sal, 35, has produced an amazing library of online lectures on math, science and a host of other subjects. In the process, he has turned the classroom — and the world of education — on its head.
The aspiration of khanacademy.org is to give every kid a chance at a free, world-class education. The site has over 3,000 short lessons that allow kids to learn at their own pace. Practice exercises send students back to the pertinent video when they're having trouble. And there's a detailed dashboard for teachers who use Khan Academy in their classrooms.
Early pilot programs in California classrooms show terrific promise. I've used Khan Academy with my kids, and I'm amazed at the breadth of Sal's subject expertise and his ability to make complicated topics understandable.
Sal Khan is a true education pioneer. He started by posting a math lesson, but his impact on education might truly be incalculable.
Sal Kh

"He was a brilliant thinker, the possessor of a truly original mind. His story is our story: the creation of one of the great intellectual pillars that support our modern world. It is the story of a remarkable man, beautifully told."
- Ian Stewart, Emeritus Professor of Mathematics, University of Warwick, England, and popular-science and science-fiction writer
George Boole was an English mathematician, philosopher, and logician. He specialized in differential equations and algebraic logic, and is now best known as the author of The Laws of Thought.
The huge impact of George Boole on technology today is explored in this stunning new film commissioned by University College Cork, where Boole was its first professor of mathematics. Narrated by Oscar-winning actor Jeremy Irons and produced by multi award-winning Oxford Film and Television, The Genius of George Boole assembles industry leaders and academics from across the globe to explore the life and impact of one of the world's greatest unsung heroes. This 58-minute film shines new light on the life, work, and legacy of George Boole.
Join Museum CEO John Hollar as he moderates an engaging conversation, about the life and legacy of George Boole with three distinguished guests: Dr. Michael Murphy, President, University College Cork, Ireland; Ms. Virginia Teehan, Director of Cultural Projects, University College Cork & Commissioning Editor: The Genius of George Boole; and Dr. Kieran Drain, CEO of Tyndall National Institute, Cork, Ireland.
The George Boole celebration is made possible in collaboration with University College Cork, Ireland.

Demystifying the Genius of George Boole: Father of the Information Age
by Natalie Smith | February 9, 2025 | 8 min read |
Tech stuff & gadgets
George Boole (1815-1864) was a pioneer who transformed abstract logic into the mathematical foundation that rules modern computing. Self-taught with no formal qualifications, Boole developed pioneering concepts like "Boolean logic" – establishing principles that helped bridge human language with machine code.

Yoji Ito

4 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Yoji Ito (伊藤 庸二, *Itō Yōji*, 5 March 1901[1]–9 May 1955[2]) was an engineer and scientist who had a major role in the Japanese development of magnetrons and the Radio Range Finder (RRF – the code name for a radar).

Early years [edit]

Yoji Ito was born and raised in Onjuku, then a fishing village in the Chiba Prefecture of Japan. His father was the primary schoolmaster and encouraged his children to achieve science and mathematics excellence. After graduating in electrical engineering from the Tokyo Imperial University, Ito was commissioned in the Imperial Navy and spent several years in assignments at sea.[3]

At the NTRI [edit]

Still in the Navy, Yoji Ito was sent to Germany for graduate study where he was a student of Heinrich Barkhausen at the Dresden Technische Hochschule. Upon completing his Doctor of Engineering degree there in 1929, he was promoted to the rank of Commander and assigned as a researcher at the Naval Technology Research Institute (NTRI) in the Meguro area of Tokyo. The NTRI had been formed in 1922, and was just becoming fully operational when Ito was sent there. Here first-rate scientists, engineers, and technicians were engaged in a wide variety of activities for advancing naval capabilities.[3]

At NTRI, Ito became involved with analyzing long-distance radio communications, and wanted to investigate the

Sultan Kösen: Tallest living man
In 2009, Sultan Kösen became the first man over 8 ft to be measured by Guinness World Records for more than 20 years.
In fact, Guinness World Records only knows of ten confirmed or reliable cases in history reaching 8 ft or more.
The part-time farmer from Turkey was found to be a towering 246.5 cm (8 ft 1 in) in height and he took the iconic title of Tallest living man.
More Hall of Fame
Two years later, the 26-year-old was measured again in Ankara, Turkey, by which time he had grown to a staggering 251 cm (8 ft 2.8 in).
Growing up
Sultan was born on 10 December 1982, but he didn't start his incredible growth spurt until he was 10 years old.
The rest of his family, including his parents and four siblings, are all average size.
Sultan's unique growth and massive height is caused by a condition known as "pituitary gigantism", which is the result of an over-production of growth hormone.
Growth hormone is released from the pituitary gland in the brain; if the gland is damaged by a tumour, for example, it can release too much (or too little) hormone. The effects of over-production include large hands, a thickening of the bones and painful joints.
Due to his extreme size, Sultan was never able to finish school and instead began working as a

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years

By Peter High, Contributor. Follow Author

Oct 13, 2014, 10:57am EDT

Share Save

This article is more than 10 years old.

This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.

First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.

He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-Lee said. "We have to build systems that allow for privacy. People have

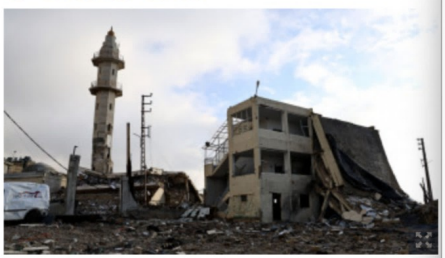
Doctor killed near Gaza hospital, Israeli forces in S Lebanon

Palestinians have said the bombing in the north is "getting worse every day" for the estimated 65,000 people living there.

MENA 15 min read

The New Arab Staff | 29 November, 2024



A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.

Dr Ahmed Ziad Al-Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.

Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

Name

Halima Abdul Kareem Al-Kahlout

Age

28 years old

Martyr Date

October 29, 2023

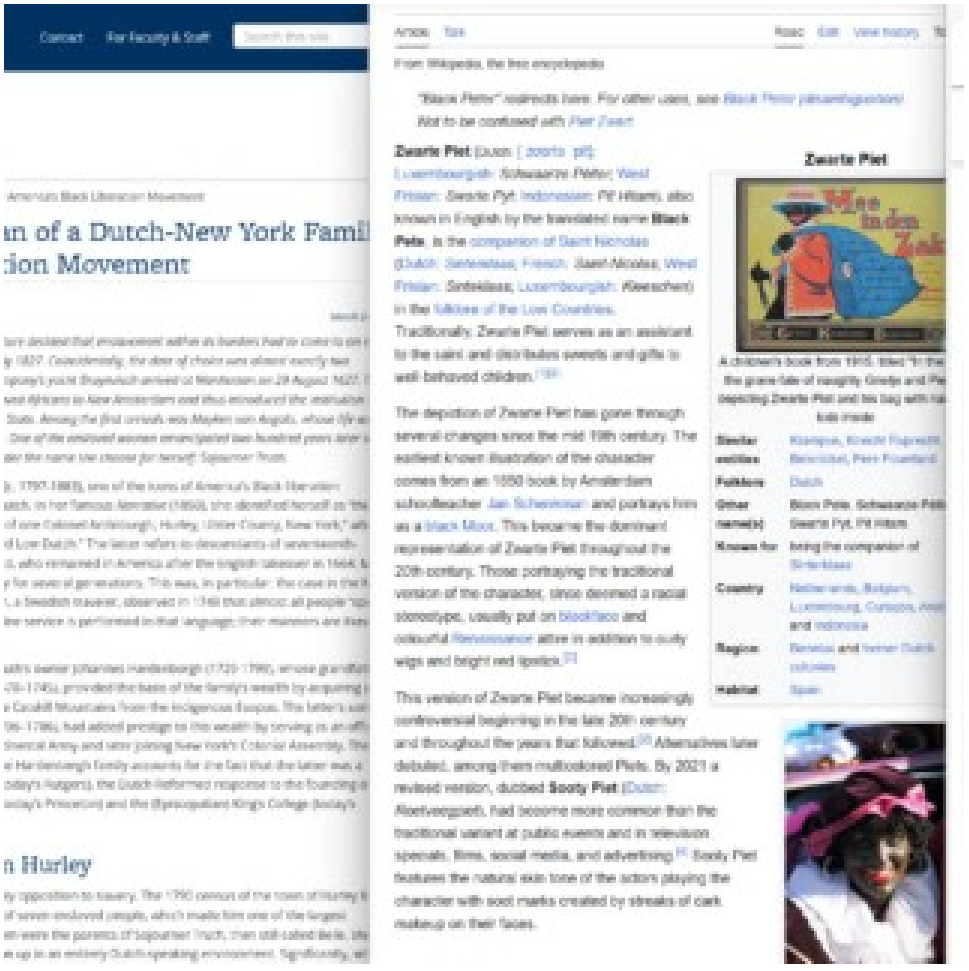
The martyr Halima Abdul Kareem Al-Kahlout, 28 years old.

Halima was a Palestinian artist known for her strong presence in art exhibitions. She earned an artistic title in arts from Al-Aqsa University and was recognized for her unique perspective on life reflected in her artwork.

Halima worked as an art facilitator with the Palestinian Ministry of Culture and collaborated with various art centers.

Her untimely death prevented her from completing paintings depicting life difficulties in Gaza under siege. Her loss left a significant void, and she is deeply missed by those who knew her and appreciated her artistic contributions.

On 29/10/2023 , she was martyred along with family members due to Israeli rocket shrapnel hitting Gaza city.



Zwarte Piet
Zwarte Piet (Dutch: [zʋɑrtə pit]; Luxembourgish: Schwaarze Péiter; West Frisian: Swarte Pyt; Indonesian: Pit Hitam), also known in English by the translated name Black Pete, is the companion of Sami Nicolas (Dutch: Sinterklaas; French: Saint-Nicolas; West Frisian: Sinteklaas; Luxembourgish: Kleeschen) in the folklore of the Low Countries.
Traditionally, Zwarte Piet serves as an assistant to the saint and distributes sweets and gifts to well-behaved children.
The depiction of Zwarte Piet has gone through several changes since the mid 19th century. The earliest known illustration of the character comes from an 1850 book by Amsterdam schoolteacher Jan Schenkman and portrays him as a black Moor. This became the dominant representation of Zwarte Piet throughout the 20th century. Those portraying the traditional version of the character, since donned a racial stereotype, usually put on blackface and colourful Renaissance attire in addition to curly wigs and bright red lipstick.
This version of Zwarte Piet became increasingly controversial beginning in the late 20th century and throughout the years that followed. Alternatives later debuted, among them multicolored Piets. By 2021 a revised version, dubbed Soot Piet (Dutch: Roetveegpiet), had become more common than the traditional variant at public events and in television specials, films, social media, and advertising. Soot Piet features the natural skin tone of the actors playing the character with soot marks created by streaks of dark makeup on their faces.

Rashomon on the West Bank: Israelis and Palestinians Debate Images of Soldier and Child

Share full article

By Robert Mackey
Sept. 1, 2015

Not much of what happened last Friday during a demonstration near the West Bank village of Nabi Saleh is in doubt. But in thousands of social media arguments since then, Israelis and Palestinians, and supporters of the two sides around the world, have interpreted one charged encounter in very different ways.

After a protest against Israel's military occupation became an exchange of tear gas and stones, an Israeli soldier tried to arrest a 12-year-old Palestinian boy, one arm in a sling, accused of hurling rocks.

An Israeli soldier briefly detained a 12-year-old Palestinian boy at a protest near the West Bank village of Nabi Saleh on Friday. Mohamad Torokman/Reuters

The soldier was quickly set upon by five female protesters, as at least eight journalists or activists photographed the confrontation.

Abstract

The hominin record from southern Asia for the early Late Pleistocene epoch is scarce. Well-dated and well-preserved fossils older than ~45,000 years that can be unequivocally attributed to *Homo sapiens* are lacking[1,2,3,4]. Here we present evidence from the newly excavated Fuyan Cave in Daoxian (southern China). This site has provided 47 human teeth dated to more than 80,000 years old, and with an inferred maximum age of 120,000 years. The morphological and metric assessment of this sample supports its unequivocal assignment to *H. sapiens*. The Daoxian sample is more derived than any other anatomically modern humans, resembling

Mathematician

Specialty	Mathematics & Law
Born	1601 Beaumont-de-Lomagne, France
Died	Jan. 12, 1665 Castres, France
Nationality	French

Early Years

Pierre de Fermat was born in a wealthy family in Beaumont-de-Lomagne, France. His father, Dominique Fermat, was a wheat, cattle, and leather merchant and he also held the position of one of the four consuls of Beaumont-de-Lomagne. Pierre had three siblings, one brother and two sisters. He spent his childhood in the city of his birth.

There is little evidence about his schooling, but it was probably at College de Navarre in Montauban where he received much of his education. Pierre studied at the University of Orleans from 1623 and earned a bachelor's in civil law in 1626. After his graduation, Pierre moved to Bordeaux.

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

Work in Mathematics

In 1630, Pierre bought a counsellor's office at Parlement de Toulouse and was sworn in by Grand Chambre in 1631. Pierre worked at this high court for the rest of his life. He rose through the ranks at the criminal court, reaching up to the highest post in 1652. Pierre was fluent in multiple languages, including French, Latin, Greek, Occitan, Spanish and Italian. Pierre shared his work with his friends and fellow mathematicians through letters. However, he would often not provide proof for his theorems. This allowed Pierre to retain the tag of amateur while he could still gain recognition he wanted.

Pierre had a close encounter with death in the early 1650s when a plague gripped the town of Beaumont-de-Lomagne. Many people died in that plague and even Pierre was badly impacted. In fact, in 1653, he was wrongly reported as dead when he was suffering from plague. However, Pierre survived that phase and went on to continue his duties at the court. Pierre died in 1665 in Castres, Tarn.

Contributions to Mathematics

Fermat is considered one of the greatest French mathematicians of the 17th Century. He made contributions to every field of mathematics that existed during his era. He explored the mathematical areas, including analytical geometry, infinite descent, and pre-evolved calculus. He considered mathematics to be a hobby, which is why he never published his work.

Fermat's greatest ideas are in the area of number theory, which is the purest form of mathematics involving the study of whole numbers and the relationships between them. Fermat became particularly famous for his Fermat's Last Theorem. According to this theorem, x to the power n + y to the power n = z to the power n has a no non-zero integer solutions for the values of x, y and z, and n is greater than 2. This theorem has puzzled mathematicians for years until recently.

He also contributed to the development of calculus through his work on the properties of curves. He relied on geometric and physical intuition to find the areas bounded by these curves through a summation process. This process is now called integral calculus. He is also regarded by some mathematicians as the inventor of differential calculus.

Along with Blaise Pascal, Fermat is also known as the co-founder of probability theory. An exchange of letters between the two mathematicians developed a general formulation of probability theory. Probability theory is the mathematics of gambling, risk, and change. The theory provides the

little theorem and laws of refraction, and many more.

Mathematician

Specialty	Mathematics & Law
Born	1601 Beaumont-de-Lomagne, France
Died	Jan. 12, 1665 Castres, France
Nationality	French

Early Years

Pierre de Fermat was born in a wealthy family in Beaumont-de-Lomagne, France. His father, Dominique Fermat, was a wheat, cattle, and leather merchant and he also held the position of one of the four consuls of Beaumont-de-Lomagne. Pierre had three siblings, one brother and two sisters. He spent his childhood in the city of his birth.

There is little evidence about his schooling, but it was probably at College de Navarre in Montauban where he received much of his education. Pierre studied at the University of Orleans from 1623 and earned a bachelor's in civil law in 1626. After his graduation, Pierre moved to Bordeaux.

In Bordeaux, Pierre started to focus on mathematical research and it was in Bordeaux where he handed over his restoration work of Apollonius's *De Locis Planis* to a known mathematician there. While in Bordeaux, Pierre was in touch with Beaugrand and it was during this time he worked on *Maxima and Minima* and came out with important work which he shared with fellow mathematician.

On wikipedia's entry on Isaac Newton it says:
In Newton's eyes, worshipping Christ as God was idolatry, to him the fundamental sin.
which is very similar to the Islamic attitude towards Jesus, exemplified in both the Qur'an and the Reports from Muhammad (pbuh) and his companions.
Whenever Ibn Umar [Companion of the Prophet Muhammad] was asked about marrying a Christian woman or a Jewess, he would say: "Allah has forbade the believers from marrying idolatrous women, and
do not know of a more severe
Idolatry, than that a woman should
say Jesus is her Lord
although he is just one of Allah's slaves."
[Sunnah.com Ref: Sahih Bukhari 5285]
and a cursory look at Newton's works proves he wrote extensively on religion.

Gauss and Non-Euclidean Geometry
By The Doc
The Triumph of Euclidean Geometry
By the early 1800s, Euclid's Elements – 13 books of geometry – had dominated mathematics for over 2,000 years. In fact, people did not speak of Euclidean geometry – it was a given that there was only one type of geometry and it was Euclidean.
The Elements had been built on five postulates – in other words five things that were assumed to be true about geometry: for example, all right angles are equal to one another.
The fifth of Euclid's five postulates was the parallel postulate.
Euclid considered a straight line crossing two other straight lines. He looked at the situation when the interior angles (shown in the image below) add to less than 180 degrees. In these circumstances, he said that the two straight lines will eventually meet on the side of the two angles that add to less than 180 degrees.

JUSTUS-LIEBIG-UNIVERSITÄT GIESSEN
Rudolf Buchheim Institute of Pharmacology
About Us
Research
History
In the early 19th century the foundation for pharmacology in Giessen was laid by Friedrich Wilhelm Vogt, who had already been giving lessons about pharmacodynamics and toxicology at the Hessian Ludoviciana University in 1817. In 1867 Rudolf Buchheim established a pharmacological institute in his accomodation at the Seltersberg, where he started doing researches in an experimental way as the leadoff pharmacologist.
Rudolf Buchheim
Rudolf Buchheim (1820-1879) is the originator of the experimental pharmacology. In the age of 47 he was nominated as a full professor for pharmacology and toxicology in Giessen. He introduced animal testing and researched in mechanisms of drug effects, whereby he provided a natural scientific basis for the pharmaceutics, which until then had been affected by evidence-based medicine, tradition and myths. For this reason pharmacology became a new, separate field in medical science ranged beside physiology and the newly invented experimental pathology. Therefore Buchheim is justifiably to be called the first 'real' pharmacologist.
Contribution to the festschrift 'The medical faculty of the university Giessen'
Pharmacotherapy is currently the most important pillar in preventing and treating infections and is part of daily life of many people. It is unbelievable, that still in the beginning of the 19th century

From Wikipedia, the free encyclopedia
Revolution Muslim (RM) was an organization based in New York City that advocated the establishment of a traditionalist Islamic state through the removal of the current rulers in Muslim-majority nations and an end to what they consider "Western imperialism". It was founded in 2007 by two American Muslim men: Jesse Curtis Morton and Yousef al-Khattab.

Who Invented Drones: Unveiling the Visionaries of Unmanned Flight
Who invented drones? The answer leads us to Abraham Karem, heralded as the innovator responsible for modern unmanned aerial vehicles (UAVs). Karem's contributions have defined today's drone technology, from his early model aircraft to the pioneering Amber drone, a significant advancement in remotely piloted vehicle technology.

Most Drug Trafficking Is From Ethiopia, Tanzania And Brazil
Smithsonian
The original Black Jews
Smithsonian Libraries and Archives
Object Details
Author
Windsor, Rudolph R. 1935-
Smithsonian Libraries African Art Index Project DSI
The author discusses the origins of the Hamites and Shemites (or Semites). He states that the original Israelites were of the Black race and that the biblical Abraham (or Abram) was a Black Shemite (a descendant of Shem). Abraham was the father of both the Hebrew-Israelite and Arab nations. The Black Shemites intermarried with Black Hamite Egyptian women, giving rise to the Arab nation. The author also states that Arabia was originally inhabited by the Ethiopians (also known as Cushites) prior to the progenitors of the Arabs. Many of today's Arabs are not Black due to the introduction of white slavery.
The story of King Solomon of Jerusalem and the Queen of Sheba (known as Makeda by the Ethiopians) points to the origins of the present black Jews of Ethiopia, known as the Falashas. The Falashas claim descent from the child of King Solomon and the

Father Of The World Wide Web, Tim Berners-Lee, Reflects On The First 25 Years
By Peter High, Contributor.
Follow Author
Oct 13, 2014, 10:57am EDT
Share
Save
This article is more than 10 years old.
This past week, I spoke at IPExpo Europe in London, and I was honored to have Sir Tim Berners-Lee, the father of the World Wide Web as a fellow speaker. He reflected on the 25 years that have passed since he helped create the Internet. He raised a number of interesting topics during the course of his presentation.
First, he indicated that he does not regret baking greater security into the initial version of the web saying, "It might not have taken off if it had been too difficult." Like the Internet entrepreneurs who would leverage the platform he helped create, he was concerned that the web have an audience first before evaluating changes that would be necessary.
He did go on to say that it is essential that the Internet allow for greater user privacy. "The idea that privacy is dead is hopelessly sad," Berners-

A high-level Syrian delegation is in the United States this week to hold meetings with World Bank and IMF officials. It's the first of its kind in more than two decades, as the war-torn country seeks removal of sanctions and to gain support from powerful international financial institutions. TRT World's Hasan Abdullah reports.

impacts of its products.

Philip Morris was born in Whitechapel in 1835, the son of a recent immigrant from Germany who had taken the name Bernard Morris. In 1847, the family opened a shop in London. The first cigarettes that Philip Morris made were in 1854.

On Mr. Morris's death, the business was taken over by his wife Margaret and his brother Leopold. In 1881 the Company went public, Philip joining Joseph Grunebaum to establish Philip Morris & Company and Grunebaum, Ltd. This partnership was dissolved in 1885 and the Company became known as Philip Morris & Co., Ltd.

The Company finally left the founding family's control in 1894, when it was taken over by William Curtis Thomson and his family. Under Thomson, the Company was appointed tobacconist to King Edward VII and, in 1902, was incorporated in New York, by Gustav Eckmeyer. Ownership was split 50-50 between the British parent and American partners. Eckmeyer had been sole agent for Philip Morris in the U.S. since 1872, importing and selling English-made cigarettes.

1919 was a crucial year for the Company. It saw the introduction of the Philip Morris coronet logo, the acquisition of the Philip Morris Company in the U.S. by a new firm owned by American stockholders, and its incorporation in Virginia under the name of Philip Morris & Co., Ltd., Inc. By the end of the next decade, the Company had begun to manufacture cigarettes in its factory in Richmond, Virginia; in 1924, what was to become its most famous brand, Marlboro, was introduced.

By the mid-1950s the Company had become a part of American culture, and soon after it launched Philip Morris International to manufacture and market its products around the world.

Bin Laden claims responsibility for 9/11
CBC News
Posted: Oct 29, 2004 3:08 PM CDT | Last Updated: October 29, 2004
Al-Qaeda leader Osama bin Laden appeared in a new message aired on an Arabic TV station Friday night, for the first time claiming direct responsibility for the 2001 attacks against the United States.
INDEPTH: Remembering September 11
The militant Islamic group decided "we should destroy towers in America" because "we are a free people... and we want to regain the freedom of our nation," said bin Laden, dressed in yellow and white robes and videotaped against a plain brown background.

Doctor killed near Gaza hospital, Israeli forces in S Lebanon
Palestinians have said the bombing in the north is "getting worse every day" for the estimated 65,000 people living there.
MENA 15 min read
The New Arab Staff | 29 November, 2024
A senior Palestinian doctor was killed outside the gates of the Kamal Adwan Hospital in besieged northern Gaza in the latest attack on the health system in the war-ravaged territory.
Dr Ahmed Ziad Al-Kahlout the head of the intensive care unit (ICU) was killed on Thursday, Gaza authorities reported, adding that the hospital facilities and staff have been repeatedly hit by Israeli forces for weeks.
Dozens of Palestinians were reportedly killed and injured by Israeli strikes on Gaza City overnight Thursday, including an airstrike which a house in Zeitoun, as large raids were reported in central Gaza.

The martyr Halima Abdul Kareem Al-Kahlout, 28 years old.
Halima was a Palestinian artist known for her strong presence in art exhibitions. She earned an artistic title in arts from Al-Aqsa University and was recognized for her unique perspective on life reflected in her artwork.
Halima worked as an art facilitator with the Palestinian Ministry of Culture and collaborated with various art centers.
Her untimely death prevented her from completing paintings depicting life difficulties in Gaza under siege. Her loss left a significant void, and she is deeply missed by those who knew her and appreciated her artistic contributions.
On 29/10/2023 , she was martyred along with family members due to Israeli rocket shrapnel hitting Gaza city.

Who Created Linear Algebra?

BY **EDMUND DUNCAN** • MAY 31, 2022

Table of Contents

mathematician Arthur Cayley.

Finding the eigenvectors and eigenvalues for a linear transformation is often done using matrix algebra, first developed in the mid-19th century by the English mathematician **Arthur Cayley**. His work formed the foundation for modern linear algebra.

Who Discovered Arithmetic?

ON: JULY 7, 2022

Asked by: Pietro Gusikowski V

Carl Friedrich Gauss was the father of sequence and series. He was able to create so much mathematics in his lifetime was that he got a very early start..

Who invented sequence in mathematics?

"Liber Abaci" first introduced the sequence to the Western world. But after a few scant paragraphs on breeding rabbits, Leonardo of Pisa never mentioned the sequence again. In fact, it was mostly forgotten until the 19th century, when mathematicians worked out more about the sequence's mathematical properties.

Who invented arithmetic and geometric sequence?

We do know, however, that the Egyptians were the first to develop arithmetic math. **Carl Gauss** was born in 1777 in Germany. As a ten year old, Gauss discovered the geometric formula for sequences. As Gauss grew older, he did not stop there.

Mehmet Ülger
Mehmet Ülger (Pınarbaşı (Kayseri), 1 februari 1962 – Rotterdam, 27 november 2017) was een Nederlands journalist en documentairemaker.
Loopbaan
Hij studeerde aan de Academie voor de Journalistiek in Tilburg en werkte sinds midden jaren negentig als journalist voor tv-actualiteitenrubrieken, tijdschriften en kranten, waaronder Netwerk, EenVandaag, KRO Spoorloos, NOVA, Zembla, het ANP, Trouw, Contrast, Wordt Vervolgd, De Humanist, De Groene Amsterdammer, de Volkskrant en Onze Wereld.
Ülger was gespecialiseerd in Turkije, de islam, allochtonen in Nederland en Turks nationalisme. Hij deed achtergrondonderzoek en werkte soms undercover. Met Stella Braam schreef hij Grijze Wolven : een zoektocht naar Turks extreem-rechts. Kort na publicatie van het boek in 1997 werden de schrijvers met de dood bedreigd en moesten ze onderduiken.
Op 7 januari 2015 werd Ülger korte tijd vastgehouden in Istanboel. Hij werd verhoord door de politie, de reden was dat hij in september 2013 tegen de regels

"Shriner" and "Nobles of the Mystic Shrine" redirect here. For the surname, see Schreiner (disambiguation). For the march by John Philip Sousa, see Nobles of the Mystic Shrine (march).
Shriners International, formally known as the Ancient Arabic Order of the Nobles of the Mystic Shrine (AAONMS), is an American Masonic society. Founded in 1872 in New York City, it is headquartered in Tampa, Florida, and has over 200 chapters across nine countries, with a global membership of nearly 1.7 million "Shriners".[1] The organization is known for its colorful Middle Eastern theme, elaborate participation in parades and festivals, and the Shriners Children's network of nonprofit pediatric medical facilities.[2]
Shriners International describes itself as a global fraternity "based on fun, fellowship, and the Masonic principles of brotherly love, relief, and truth".[3] As an appendant body within Freemasonry, membership is open to men who have been initiated as Master Masons in a Masonic rite; various partner organizations accept women and youth.[4] Shriners are obliged to uphold the fraternity's mission and values, which include self-improvement, service and leadership to the community, and active involvement in social and philanthropic causes.[5]
Shriners International is recognizable for its Middle Eastern-inspired iconography, ceremonies, and motif. Shriners wear distinctive red fezzes as their official headgear, while fraternal regalia often features camels, pyramids, the Sphinx and other ancient Egyptian and Arabian symbols. The headquarters of local chapters, formally known as
